

Reforestation as a global urgency

Date 20
MM DD YYYY

~~Outline~~

1. ~~Introduction~~
1.1 Attention Grabber
1.2 Background Information
1.3 Thesis Statement
2. Why Reforestation is a global urgency?
 - 2.1 Deforesting is leading to increase in greenhouse gas emissions
 - 2.2 Climate change and Global Warming
 - 2.2.1 Changing weather patterns
 - 2.2.2 Melting glaciers and rising sea levels
 - 2.3 Natural Disasters are becoming increasingly common such as wildfires and floods
 - 2.4 Rapid urbanization
 - 2.5 Natural ecosystem and wildlife species
3. Reasons why countries are not making serious efforts for Reforestation
 - 3.1 Developing world stance
 - 3.1.1 Third world countries believe that they contributed less to carbon emissions since the industrial revolution
 - 3.1.2 They are more effected by the consequences
 - 3.1.3 Developed world needs to sincere make sincere efforts for reforestation

3.2 Developed world stance X

3.2.1 Both the developing and developed world equally responsible

1. Strategies for representation

4.1 Both the developing and the developed

world need to make collective efforts

of developmental and environmental consideration

5. Conclusion.

The Essay

There is a famous Chinese proverb that "If you want to save your future generations then educate your children and plant trees." From this proverb, we can infer the importance of planting trees. (Trees are carbon eaters but due to X There are no numerous benefits of tree. They are essential for basic human life as they ~~prod~~ provide oxygen for survival. Alongwith this, in addition to this, they are a safe haven for many wildlife species. Moreover, trees are carbon eaters. Since industrial revolution, many greenhouse gases are added

to The environment, so without trees death of trees is leading to greenhouse gases, but trees are being cut down so many of the greenhouse gases linger in the environment and they are causing natural disaster, so reforestation becomes a global urgency. In this essay, one will delve into the reasons that factors such as deforestation, climate change, natural disasters, rapid urbanization and natural ecosystem that are making reforestation as a global emergency and the strategies that are to be adopted to cater to this problem.

Deforestation is a major reason why for planting trees immediately. Amazon Rainforest is the largest forest in the world, but it is being cut down by humans for generating electricity such as biofuels. Pakistan is one of the forest deprived countries. Only 5% of its total land area is covered by forests. Since industrial revolution, many of the greenhouse gases are emitted by industries, fossil fuel combustion, and agriculture process, livestock digestion, and transportation sector. Emissions from fossil fuel are approximately

60% of the total greenhouse gases. So lesser the trees, more will be the emissions. One initiative was taken by the countries to plant trees, but only Pakistan and Argentina were able to meet the target. All the countries need to realize this as soon as possible and need to make serious effort to counter the problem.

The world climate is changing because of the greenhouse gases. Greenhouse gases are required to keep our Earth warm, but addition of these gases more than the requirement is a problem. Excessiveness of everything is bad. These gases are causing enhance greenhouse effect which is leading to global warming. 2023 was the warmest year ever recorded since industrial revolution. Global warming is melting glaciers which is leading to rising sea levels which can further lead to many disasters. So in order to control these problem, planting trees is one solution. Trees are carbon eaters, so it they will reduce the amount of greenhouse gases in the environment which will solve the problem of global warming and climate change.

Hence, countries need to realize that reforestation is a global urgency.

Reforestation is a global urgency because natural disasters are becoming increasingly common. Wildfires have destroyed thousands of acres of forests in California in 2023. The "Majine fire" destroyed many wildlife species and trees. Similarly, zombie fires are also becoming very common. In zombie fires, the roots of trees light up due to intense heat and it can wipe out a large area of a forest without anyone noticing. In addition to this, droughts are becoming common as well in many African countries. Moreover, trees are useful for breathing fresh air but due to natural disasters such as floods many of the trees got cut down. So to control the effects of these disasters, it is very important to plant trees and to make this world a better place for ourselves and future generations. Hence, reforestation is a global urgency.
