#### (g) Limited access to loans in case of losses and natural disasters

Access to finances and loan is very limited for the people associated with this profession.

### (3) Conclusion.

Agriculture Sector Accounts for 23% in Pakistan's GDP and over 37% of its population is employed in this sector. Since the independence, agriculture Sector has been a Key Contributor to the Country's economy. However, despite being one of the largest Contributor in Pakistan's GDP, agriculture sector faces some serious problems. For instance, Pakistan is one of the most water-scarce Country Countries and agriculture Sector is one of the most water consuming Sectors, so there remained always water problem in agriculture Sector.

Similarly, another problem in Pakistan's agriculture Sector is that it still relies on the old methods and techniques of farming. Likewise the lack of advancement of technology is because there is no adequate research on the Sector for discovering new methods, tools and machines of farming. Other than these, another pressing issue with Pakistan's agricultural Sector is the poor road infrastructure which causes delays in product supplies and ultimately results in losses for the farmers. Apart from delays due to poor infrastructure, the farmers also face losses due to price fluctuation of the products and the frequent occurrence of natural disasters, like floods and droughts. In case of losses, the farmers also face Problems in accessing loans, so this is also a

Problem in Pakistan's agriculture Sector. These problems have hampered the development of this Sector. So if these problems are resolved, then Pakistan can enjoy the full potential of this Sector.
