NEW PAPER

Climate change: Causes and consequences

Brain Storming :-

* Causes :-

- 1) Burning of crops
- 2) Burning of waste
- 3) Mining
- 4) deforestation
- 5) Urbanisation
- 6) Nuclear
- 7) Armies military drill
In which they burn
alot of fuel
- 8) Space missions.
- 9) Red AI
- 10) use of AC (Refrigerine)
- 11) Excessive use of Plastic
- 12) Cars and bike Usage

* Consequences

- 1) Ozone depletion
- 2) floods and Drought
- 3) Air pollution
- 4) Mangrove dead
- 5) Sea life will perish
- 6) Unhabitable Summer
- 7) skin diseases
- 8) Barren land
- 9) soil erosion
- 10) wildfires
- 11) Hard to grow crops
- 12) acid rain

Not readable

Properly write your outline

Follow proper structure of
introduction and outline

Present your paper in formal
manner

Outline :-

1. - Farmer burning crops:-

- in order to save crop blight a fungal or bacterial disease
- cost effective way to remove and unwanted crops

2. -

- Leads to advance level of lung disease AQI become over 150
- Visibility around the area becomes, harder to see roads, if crops are nearby airport then flights may cancel.

Machine and electricity

3. - Excessive use of ~~forest~~ fuels

- the machinery which are used in mining require humungous amount of diesel to operate
- Military drill, specially when they train soldiers to control and operate missiles, helicopter, jet fighters and tanks, all of these take tons of gallon of petrol and diesel.
- daily we use bus, cars and motor bikes which also release CO_2 which is a green house gas.

4. -

- electricity generation with coal also produce enough CO_2 to make AQI above 100

Date _____

M	T	W	T	F	S	S
---	---	---	---	---	---	---

Consequence :-

- ~~huge amount of~~ CO_2 and CO are dangerous not only for human
- CO_2 is a green house gas which rise sea level and ultimately main culprit behind climate change
- CO is poisonous, if inhale by masses they require medical attention as it is fatal.
- They combine increase AQI points to skies which shows poor quality of air.

→

Excessive use of Technology:-

Cause :-

- Using Air conditioner which use Refrigerant ^{gas} ~~base~~
- Gaming and mining needs alot electricity.
- Space mission like voyager 1 and 2 and spaceX mission need tons of gallons of fuels
- growth of AI:- mostly developers and engineer ignore the fact that their model using excessive electricity

Consequence:-

- ~~em~~ Refrigerant gas aid in depletion of O_3 ozone layer which means more sun ray which increase temperature of globe.
- Other technologies will push mining to another level because all chips are made up of silicon

Mr.

and silicon is only found by mining and they also put more weight on electricity generation which done by coal primarily.

→ Industrialization Urbanisation

- Issues → deforestation is to be done to paved the way for housing, road and railways.
- Natural habitat of animal and plants destroyed
 - ~~excess~~ excessive use of plastic material
 - more supply than demand in order compete in Market.
 - No education on afforestation, zero awareness
 - huge amount garbage is being collected.

Consequences:-

- No or less evapo transpiration, and less oxygen because of few trees
- No technique to decompose plastic's only way is bury and wait 100~~0~~ of years which will eventually negatively effect fertility of land.
- more production means more operations which ultimately means more use of fuels
- People don't have knowledge, but they have to be Unhabitable Summer.

Date

M	T	W	T	F	S	S
---	---	---	---	---	---	---

Industrialization :-

- Cause
- Making chemicals and dumping waste in sea
 - Plastics of different types
 - Pathologists ~~dealing~~ ~~deadly~~ ~~diseases~~ to make medicine
 - decomposing waste by burning.

Consequences :-

- dumping toxins into ~~water~~ sea will be deadly for fish as well as for mangroves this very water ~~it~~ kill all plants nearby.
- Land fills, plastic and many other toxic material ~~are~~ are burned result in SO_2 and SO_3 release which acidic rain deadly for plants.

The earth is fine place and worth fighting for
but the reality paints a darker ~~Portrait~~ picture.

The monster of human greed is winning, even
the world health organisation says that "we have passed
or Global warming now we are in era of Global
bailing". The factors that provoke climate change are
reckless human activities in agriculture, Technology
development, ruthless Urbanization and Industrialization
these are the pillars of upcoming ^{climatic} chaos. we should
Analyze them deeply in order to counter their effects.
before it becomes irreversible catastrophe.
