Climate Change: Causes and Consequences

The Essay

"To tackle climate change you do not have to reduce your quality of life, but you do have to change the way you live."

~ Ken Livingstone

Ken Livingstone's words implies that climate change is not about doing without; it is about doing in a

different way. It is a modification from impulsive consumption to deliberate, sustainable living that reduces the causes and limits the consequences which securing a better way of living for current and future generations. Climate change is neither a new issue nor a resolved one. Developed nations are dealing with it successfully and developing nations are still struggling. Due to climate change 9 million people is killing annually through pollution and displacing millions more than wars. Greenland loses 30 million tons of ice at every hour. According to Pakistan Economic Survey the year 2024 was recorded as Pakistan's 9th warmest year in the last 64 years, with an average temperature of 23.52°C and rainfall levels 31%. Therefore, climate change is a multifaceted crisis caused by both human and natural

factors. Its consequences pose serious threats to social, economic and environment in the world wide and humanity demanding urgent and cooperative action to mitigate its effects and secures a sustainable future.
