Essay:-

As the modern world is growing day by day, and the dependance on AI is increasing quickly.

There is no doubt that AI has helped human being in every field of life. The goal of artificial intelligence to perform complex task without the assistant of others. It has played vital role in hospitals, banks, industries, and economy. AI has changed the world quickly. In addition to, AI has offers many benefits, its potential risks to employment, privacy, and suppress human control. intelligence make it a serious threat if not properly regulated. In this essay, we will describes about the threats of AI to mankind.

Firstly, One major threat of AI is job displacement due to automation. Many workers have been replaced by automatic machines and robot system. Low-skilled workers loses their job due to artificial intelligence. It leads to unemployment, poverty and economic inequality. For example, In Pakistan reports indicates that around 17% of job

are at high risk due to automation and artificial intelligence. It has widened the gap between rich and people in Pakistan. If this continues like this without any measures, it will disturb the economy fastly.

Secondly, serious concerns the risk of privacy and security. It can create fake images and affect individual freedom. It can collect and analyze personal data and misuse it.

Many governments and organizations use these data for their use.

Cybercriminals can also use AI for hacking, spreading misinformation and online fraud. Deepfake technology can create fake videos and damage

the person's reputation. In 2025,

most famous YouTuber wife created a fake video through AI and spoiled

her reputation. On the other hand,

in 2025 16 billion accounts have been hacked on platforms like Google, Facebook, Yahoo, and Twitter.

So, it is essential to control it with proper regulations.
