Topic: Climate change: Its causes and consequences

Brainstorm: Barack Obama, man-made, global, industrialization, global boiling, agriculture, glaciers, environmental, health, determination

Thesis statement: climate change is not a natural phenomenon primarily but it is man-made issue due to industrialization, consumption of fossil fuel, deforestation and intensive agriculture; these result in so many environmental and socioeconomic consequences, such as melting of glaciers, ozone layer depletion, global boiling and health hazards, which will require an urgent and strong determination from all over the global community.

Introduction: "We are the first generation to feel the effects of climate change, and we are the last generation who can do something about it." These words of the former President of the U.S. Barack Obama can perfectly represent the sensitivity of climate crisis. Though it is not a new issue to the globe but it requires an immediate response. Because it threatens the entire world as it is not limited to a part of world. Climate change is not a natural phenomenon primarily, but it is man-made issue due to industrialization, consumption of fossil fuel, deforestation and intensive agriculture; these result in so many environmental and socioeconomic consequences, such as melting of glaciers, ozone layer depletion, global boiling and health hazards, which will require an urgent and strong determination from all over the global community.
