

Climate Change: Causes and Consequences Moor

Outline

Batch 89

1. Introduction

a. Hook

b. Background

c. Thesis: Climate change is a reality exacerbated by lack of political will, greed of capitalists and regional wars leading to far-reaching economic, political and environmental impacts.

2. Causes of Climate Change in the world

2.1 Political causes of climate change.

a. Changing ideologies of elected governments.

b. Capitalism effects on climate policies.

c. Resistance to shift from fossil fuels

2.2 Economic causes of climate change

a. Increasing multipolarity of the world

b. Reliance on defence industries to

maintain sovereignty

c. Refusal of the Global North to facilitate the climate-impacted Global South.

2.3 Social causes of climate change

a. Wars taking away the focus of the world from climate.

b. Lack of awareness in developing countries regarding climate change.

c. Dependence on deforestation to support livelihood in the third-world.

3. Consequences of Climate Change in the World

3.1 Economic Impacts of Climate Change in the World

a. Agrarian economies take the brunt

a.i. Floods 2025 Pakistan

b. Displacement due to floods and rainfall.

c. Infrastructure damage due to climate change.

3.2 Social Impacts of Climate Change in the World.

a. Climate change contributing to gender inequality

a.i. Monsoon marriages in Sindh.

b. Rise in water-borne diseases and health infrastructure burden.

c. Increasing out of school children due to climate change.

3.3 Environmental Impacts of Climate Change in the world.

a. Summers longer, winters shorter.

a.i. Antonio Guterres 'global boiling' comment.

b. Rising sea-levels.

c. Melting of glaciers.

Conclusion

Essay

Climate Change: Causes and Consequences.

Introduction:

Recently, the President of the United States of America posted on his social media platform: "Record Cold wave expected to hit 40 states... Could the Environmental Insurrectionists please explain - **WHATEVER HAPPENED TO GLOBAL WARMING??**"

Indeed, when the elected leader of the richest country of the world has such views, they are bound to translate into policy. Unsurprisingly, the U.S pulled out of the UNFCCC (United Nations Convention on Climate Change) - signed in 1994, under which Conference of Parties happens every year. This has reduced the funding for climate change initiatives and left third world countries anxious on how to deal with the dilemma

of climate change despite being relatively minor contributors to global greenhouse gas emissions. Climate Change is a reality and exacerbated by lack of political will, the greed of capitalists and regional wars leading to far-reaching economic, social and environmental impacts.
