A. The Societies of DHA, Shadman Enclave, and Ettihad Town <sup>have been</sup> built on agriculture land.

2.4. Forest Fire

A. The millions of acres forests land have been wiped out in California by fires.

Date .....

Industrial wastage is one of the most pressing issue in the world. The industrial revolution brought environmental problems besides various benefits. In the developing countries, there are no proper channels are built to excrete the wastage through proper channels. Industries are excreting directly into lakes, rivers, and oceans through which mostly plants absorbed water. The wastage damaged the root system of plants which that stops water absorption, and eventually the plant died. According to the FAO, An estimated 80% of industries are directly releasing their wastages into water sources <sup>over</sup> world-wide. which affects nearby ecosystems. Ramzan Sugar Mill, <sup>which</sup> that is situated in Jharkhand, is directly excreting its wastage into <sup>com</sup> agricultural land and canals. The areas which connects with these canals are not suitable for plants, and no plant can be seen around them. Moreover, The industries are increasing day by day, that means more pollution or excretion will be <sup>be discharged</sup> done into water channel that can damage the plants ecosystem.
