

# Reforestation as a global urgency

## Outline

### Introduction

(1-2) Why Reforestation as a Global urgency

(2-2) Reforestation is dire need to mitigate emission of green house gases.

(2-2) Curbing pollution to prevent diseases  
① skin cancer rising issue

(1-3) Abating land utilization for the production of biofuel

~~in Diesel and oil formation from starch~~  
(case in point) Brazil utilizes land for the purpose of fuel production.

(2-4) Enhancing green land for production crops

① Reduce food crisis and inflation

(2-5) Prevention from Acid rain to mitigate soil erosion and to ensure marine life safety.

(1-6) Maintaining biodiversity on the earth.  
case in point (40 million ~~species~~ living on the earth)

(1-8) Reforestation is necessary to reduce climate changes.

Case in point ( 2022 flood devastated infrastructure  
and human lives )

(1-8) Preventing schools and hospitals  
from destruction

(2-9) Reforestation is required to  
reduce poverty.

(1-70) It is highly required to make  
environment resilient to catastrophic  
calamities.

(1-8)

Conclusion.

Introduction

# Introduction

The earth does not belong to ~~us~~ but we belong to the earth. This implies that ~~we~~, human beings are tremendously accountable to keep environment safe and healthy. As <sup>the</sup> most of <sup>the</sup> developing countries, particularly <sup>the</sup> South Asian countries are grappling with catastrophic climate changes from few last decades. It is stated that because these countries are more vulnerable to external changes. Moreover, the increasing ~~atmos~~ urbanization and demands of food production have induced individuals towards deforestation, which has devastated atmospheric environment, leading to cause

dangerous diseases. Therefore, ~~Reforestation~~  
is one of <sup>the</sup> major and crucial measure  
to combat ~~numerous~~ evils. Like, mitigating  
emission of green house gases, preventing  
acid rain production and maintaining  
bio diversity and ~~utilization~~ ~~of~~ renewable  
energy. ~~In addition~~, Reforestation  
not only ~~deletes~~ ~~production~~ ~~and~~ ~~stopping~~  
harmful ~~ways~~ ~~but~~ ~~rather~~ also encourages  
to develop resilient infrastructure  
against ~~climatic~~ ~~changes~~. ~~Therefore~~  
~~chronic~~ and ~~vigilant~~ ~~measures~~ ~~are~~  
~~needed~~ ~~to~~ ~~mitigate~~ ~~the~~ ~~pressing~~  
~~issue.~~
