and consequences

# Climate Change: Causes And Consequences

Date:

"A child in my neighbourhood learned to identify the native birds. Last year there were only two left". This denotes the urgency of climate change. God knows how many more species have gone extinct. For the past 10,000 years, the earth has enjoyed a relatively stable climate: However, the industrial evolution, marked the beginning of human-driven emissions, with global temperatures showing a consistent increase since 1880s, The causes behind this serious global matter are the burning of fossil fuels, excessive reliance on transport, industrial emissions, power generation, and massive deforestation. Also, it has several consequences such as long-lasting droughts, sea rise and flooding, food shortages, deterioration of human health and economic loss.

Write thesis statement on Intolerance....

## "Intolerance: Causes And Inlay Forward"

Thesis:

Intolerance is caused by multiple factors such as lack of awareness, socio-economic inequalities, biased and unfair politics, absence of impartial judicial system, religious extremism, media-led misinformation. ~~Inlay forward lies in ensuring awareness through academia, eradicating socio-economic inequalities, providing employment opportunities, media accountability and enacting stringent laws.~~

avoid such generic statements  
please

write thesis statement on strategic....

## Strategic Location of Pakistan: Opportunities

Thesis: ~~and~~ challenges. At the dist ~~Central~~

Strategic location of Pakistan provides both opportunities and challenges. Opportunities

included ~~the~~ regional connectivity and trade hub; China Pakistan Economic Corridor (CPEC) project,

Energy corridors with Central Asian Republic

countries (CARs), Fertile land, Gwadar Port at

the Strait of Hormuz. There are multiple challenges

such as Security issues, Terrorism and internal

unrest, great power rivalry, Climate change and

resource scarcity, Pak-India tensions.

# Why Aspirants fail in Competitive Exam?

## Paragraph Writing on Lack Digital Distraction.

One of the main reasons for failure seen today is ~~digital distraction~~ **digital distraction is one of the cause** social media negatively impacts students performance. The constant alerts and notifications deviates aspirants concentration and focus. ~~Moreover,~~ Switching between ~~social media~~ and ~~academic tasks~~ undermines learning, increases procrastination and lowers motivation. Secondly, the other factor ~~is~~ the addiction to short videos (reels) and memes. ~~This~~ rapid, high stimulation nature of short videos conditions the brain to expect novelty, which is making it difficult for aspirants to focus on slow-paced, in-depth academics. In addition, overloading the brain with trivial content causes "brain fog" and mental fatigue, which reduces the overall productivity of aspirants. The other reason is the use of AI tools. Excessive reliance on AI-driven solutions contributes to cognitive atrophy, ~~and~~ ~~diminishing~~ ~~critical~~ ~~thinking~~ abilities. ~~No learning occurs unless the brain is actively engaged in making meaning and sense and this is not going to occur~~ ~~if~~ the aspirants get ready-made notes, which lacks creativity in answers. Active learning ensures a deep understanding of the subject matter.

Assignment by Sir Ali:

write one paragraph on digital distraction; points

excessive use of social media, reels and memes,

overuse of AI. It's the

paragraph of why aspirant....

**such sentences do not make any sense**

all of which are compromised due to the overall  
Thus, digital distraction hampers the overall  
performance of an aspirant.

One paragraph on climate

"Climate change: causes and consequences" Date: \_\_\_\_\_

To begin with, one of the primary cause of climate change is the excessive burning of fossil fuels. When fossil fuels are burned, they release large amounts of carbon dioxide (CO<sub>2</sub>), a green house gas, into the air. Green house gases trap heat in our atmosphere, causing global warming. Already the average global temperatures has increased by 1C, and in 2024 it has passed the critical 1.5C milestone. The reason behind the alarming emissions is the carbon foot print of developed countries such as United States of America (USA), China, and India's accounting for nearly half of emissions. For Example: China has the greatest number of coal-fired power stations. As of July 2025, there are 1,195 operational coal power plants on the Chinese Mainland. This was more than 400 times more than the number of such power stations in India, which ranked second. China alone is responsible for over 50 percent of global coal electricity generation.
