

PART-II

Q. 2. Write a précis of the following passage in about 120 words and also suggest a suitable title: (20)

It is in the temperate countries of northern Europe that the beneficial effects of cold are most manifest. A cold climate seems to stimulate energy by acting as an obstacle. In the face of an insuperable obstacle our energies are numbed by despair; the total absence of obstacles, on the other hand leaves no room for the exercise and training of energy; but a struggle against difficulties that we have a fair hope of over-coming, calls into active operation all our powers. In like manner, while intense cold numbs human energies, and a hot climate affords little motive for exertion, moderate cold seems to have a bracing effect on the human race. In a moderately cold climate man is engaged in an arduous, but no hopeless struggles and with the inclemency of the weather. He has to build strong houses and procure thick clothes to keep himself warm. To supply fuel for his fires, he must hew down trees and dig coal out of the earth. In the open air, unless he moves quickly, he will suffer pain from the biting wind. Finally, in order to replenish the expenditure of bodily tissue caused by his necessary exertions, he has to procure for himself plenty of nourishing food.

Quite different is the lot of man in the tropics. In the neighbourhood of the equator there is little need of clothes or fire, and it is possible with perfect comfort and no danger to health, to pass the livelong day stretched out on the bare ground beneath the *shade* of a tree. A very little fruit or vegetable food is required to sustain life under such circumstances, and that little can be obtained without much exertion from the bounteous earth.

We may recognize *must the* same difference between ourselves at different seasons of the year, as there is between human nature in the tropics *and* in temperate climes. In hot weather we are generally languid and inclined to take life easily; but when the cold season *comes*, we find that we are more *inclined* to vigorous exertion of our minds and bodies.

Impact of Climate on Lifestyle ✓

Varying climates characterize the ~~qualities~~ ^{rewrite this sentence} of a population.

In cooler regions, ~~survival~~ requires greater effort and energy. While extreme cold may leave people unable to carry out tasks, a manageable ~~cold~~ climate carries most benefits. It allows ~~one~~ to thrive by ~~existing~~ within the limits of the body. Similarly, it pushes one to carry out tasks ~~and~~ be active to achieve comfort. The least energy has to be refuelled by further work.

~~However~~, warm climates ~~however~~, require little effort ~~to~~ carry out the same functions. Sources of energy are plenty while activity ~~remains~~ low. This results in qualities of lethargy and laziness. The attitude and ~~approach~~ to life, therefore, varies ~~according~~ to climate.
