

Test: week 3

Assignment: introduction, thesis statement, crunch
paragraph

Submitted by: Manahil Raziq

Submitted to: Dr. Aref Javed

Batch:027

Topics:

1. Globalization and climate change are interrelated.
2. Has employment increased or decreased during cyber
age?

Topic: Globalization and climate changes are interrelated

"Globalization is not monolithic force but an evolving set of consequences some good, some bad and some unintended. It is the new reality" (John B. Haason Globalization: A Rendezvous with reality, 2007). It means that globalization is flexible, it has both both good and bad effects. Similarly, globalization is directly or indirectly related to climate change.

Increase in population has led the globalization and in return alarming changes are noticed in climate

As population of the world increases there is increase in demand for shelter which is the basic need of life. Number of factories have increased.

Sources of energies are widely used which have a lethal effect on climate change. Technology is developing by leaps and bounds. Beside all these factors transportation is another milestone. Globalization has effected our environment in different aspects.

Winters have shortened and degree of temperature is very low than usual. Summers have extended and degree of temperature has risen that causes destruction in the world. Rain patterns have changed which causes floods and land sliding. Globalization leads to variety of pollutions. We can tackle the climate

changes caused by globalization by ensuring the use renewable energy resources, recycling of hazardous material, replacement of transport fuel, enhancement of green economy and by protecting ozone layer from destruction. From past few years globalization has been a great challenge that threatens the climate. It has worsen the climate change to the extent that global ~~warming~~ ^{warming} is replaced with global boiling. Preventive measures such as recycling of wastes and reduction of fuel utilization can control the climate change.

Globalization is the extension of technology, trade, economy interdependence and all other elements that are basic needs of human life. Rise in population can accelerate the globalization, because demand for jobs increases. Globalization has a key role in climate change. As modern technology is based on use of energy resources that in return emits harmful gases and rays. ~~Due to~~ these gases emission results in the formation of a blanket on the atmosphere which is referred as green house effect. It leads to global warming. Change in climate leads to the abnormal rise or fall in degree of temperature. This fluctuating temperature cause glaciers melting, heavy unseasonable

rains, floods, storms and variety of pollutions.

Topic:- Has employment increased or decreased during cyber age?

Fishes were being cooked in a hot oil in a frying pan. Some fishes were still alive. One of the fish said, "lets get out of these." In order to save their lives, all the fishes leaped out of the frying pan together, and fell into the burning coal. As fishes were trying to leap out of hot oil, they fell into the burning coal.

Similarly, Cyber age has provided bundle of employment opportunities to the people to get out of the economic crises. Beside all the amenities it has created different challenges to the people. Despite the provision of Jobs cyber age has also deprived people of jobs. Cyber age has reduced the employment facilities because of the threatening challenges. Cyber security attacks,

• Privacy issues and online harassment has compelled society to avoid cyber provided employments. In this cyber era very less employment opportunities are available for people because most of the jobs depend on internet that's why not everyone can easily ^{have} access to it. Robots have replaced humans in various sectors. Chat GPT can be a risk for disclosure of private data. One of the prime threat is cyber attack. However, Cyber

age has provided a wide range of employment facilities as everyone can have access to the jobs and specially women can safely work from home. It offers variety of jobs like E-commerce, E-business etc

Cyber age is the era of well developed Technology, that relies on internet, networks, computers, Apps etc Despite serious social and ethical problems. It has facilitated man kind in different aspects. It provide jobs to the people like E-commerce, E-business etc. It provide jobs in health, education, agriculture and industrial sectors. As everything in universe has both positive and negative role. Similarly, cyber age also has evil face. Cyber attacks, security threats, are the great challenges nowadays. Apart from it cyber age has limited the creativity because any kind of information is easily available on internet. Humans are being replaced with AI and robots. This negative role of cyber age is driving people to unemployment.
