English Essay

Nuclear risk anywhere is a challenge to peace everywhere.

Outline

1. Introduction:

Thesis Statement:

Nuclear risk is a challenge to peace everywhere because it affects the region stability, economic prosperity, developmental growth etc. Nuclear risk prevent countries of focusing on the key challenges. There is a need to take some measures, by involving international organs to counter nuclear risk.

2. What is nuclear risk?

3. The relation between nuclear risk and peace.

4. Causes of Nuclear risk:

9. Territorial disputes between two countries

results in nuclear risk.

b. Nuclear risk is caused by strategic objectives of one country in another.

c. Aggression between the states causes nuclear risk.

d. New development and testing of nuclear weapons results in nuclear risk.

e. Self-defence of a country also causes nuclear risk.

5. How nuclear risk anywhere is a challenge to peace everywhere:

a. Nuclear risk is diverting focus from states affairs to more nuclear development affect the peace.

b. Nuclear risk is a challenge to peace by creating instability in the region.

c. Nuclear risk become the reason of cyber war between the countries.

d. Due to nuclear risk foreign investors avoid investment in developmental projects affect the economic prosperity.

e. Services of a country decline due to nuclear risk affect the country image by demotivating the tourists.

f. Nuclear risk prevents International organizations and NGOs from assistance, is a challenge to peace.

g. Nuclear risk results in trade's decline affect the economic peace.

6. Suggestions to Overcome Nuclear risks:

a. IAEA should bring a policy to terminate nuclear weapons.

b. NPT should be implemented without any biased.

c. Countries should reduce their nuclear weapons to ensure region stability.

7. A Case Study of USA vs. Japan:

a. Hiroshima & Nagasaki peace and growth is still disturbed because of USA bombing.

8. A Case Study of Pakistan vs. India:

a. The whole region peace is at risk because of Pakistan & India nuclear weapons.

9. Conclusion

In today's world the peace is at high risk because of the growing nuclear weapons, which is increasing day by day. The countries focuses on new development of nuclear weapons, compromises on the peace, which causes the nuclear risk. The nuclear risk is a challenge to peace everywhere because it affects the region stability. The region stability is affected by the countries aggression towards each other which affect the peace. Economic prosperity is also affected by nuclear risk because nuclear risk de-motivate foreign investors and tourists. More-over nuclear risk is a challenge to developmental growth, which is stopped due to the uncertainty and less peace. In addition a country achieved peace when it tackle the key challenges, but nuclear risk divert this focus. So by taking preventive measures nuclear risk could be overcome.

Nuclear risk is a phenomenon which is associated with nuclear weapon. When a country is producing nuclear weapons at a faster rate, the nuclear risk will also increase. It is a live risk, it can be converted to a disaster at anytime and anyplace.

The relations between nuclear risk and peace is inversely proportional.

When nuclear weapons are rises, the nuclear risk is rises, which decreases the peace in the globe.

So nuclear risk and peace are interconnected to each other. To ensure the peace and stability it is necessary to highlighted the causes of nuclear risk.

Chief among the causes of nuclear risk, is territorial disputes between the countries. Such as territorial disputes between Pakistan & India, China and India, Bangladesh and India, Russia and

Ukraine etc. Such disputes cause nuclear risk, which directly impacts the peace.

Secondly strategic objectives of one country in another country is also a reason of nuclear risk. The example of Russia and Ukraine is best describe this cause. Russia has strategic objectives in Ukraine, which results in war and destroyed peace in the region.

Usually territorial disputes and strategic objectives of one country in another results in aggression. Such aggression is transforming to war slowly and at the end results in nuclear war, which is harmful to peace.

Due to aggressions, the countries speed up their new development and advancement in the nuclear field. When nuclear weapon is developed at increasing speed. It is also requires testing to check

that either the weapon is working or not. Such testing also destroy peace. For Example, when United States developed nuclear weapons, then for testing they dropped two atomic bomb on Japan, which result in human loss and affect the regions' peace forever.

As a results of such attacks, the targeted countries also struggles to developed their own nuclear weapons for self-defence. So self-defence is also one of the cause of nuclear diste. Because such weapons may also be used againsts any country, and destroy its peace, and also peace of the region. Now such nuclear diste which is causes due to the above reasons is a challenge to peace everywhere.

Nuclear diste is diverting focus from states affairs to more nuclear development. For example in

Pakistan, self-defence and security issues are a challenge which divert the focus of Pakistan from education, health, economy, development and industries to nuclear weapon development to ensure their safety and security, so this nuclear risk is a challenge to peace and prosperity of a country.

The fast and growing development of nuclear weapon in the region causes nuclear risk which create instability in the region and compromised the peace. For example if we compare the Asia and Europe. Asia is growing fast in the development of nuclear weapons such as, Iran, China, India, Israel, Russia, and Pakistan, hence the region is unstable for so many years. On the other hand Europe is a stable region which has minimum no. of nuclear state, ~~so~~ so nuclear risk creates instability in the region. Such development of nuclear

Weapons results in cyber war between the countries. For example Russia is ahead in cyber war in the world. Tensions between Russia and US is because of cyber war which is due to the nuclear weapons and its risk.

In addition nuclear risk is a challenge to peace by affecting the economic prosperity of a country. For example the foreign investors leaves Afghanistan as there were a high risk of nuclear weapons from terrorist organization. Similarly there are many countries in the world which economic prosperity and peace was affected by nuclear risk.

Moreover the tourists visits that country which is peaceful. When the peace of a country is challenged by nuclear risk, by decline in the services of a country then the image of the country is affected. The nuclear risk results

in decline of a trade services of a country, because due to nuclear tension the trade will be at risk, so other countries then did not use the trade services of the risky country. This demotivate the tourists and the country is considered as unstable.

Beside this nuclear risk is a challenge to international organization and NGOs to work in a peaceful environment. For example there is a threat to international organs to provide humanitarian assistance to the people of Ukraine because of the nuclear risk of Russia.

Along with international organs nuclear risk is also a challenge to international trade. For example Iran blockaded the UAE trade ship, because of Iran's nuclear weapon. So the nuclear risk is a challenge to a peaceful trade, which may

results to war, and affect the peace. So to overcome such nuclear risk the following steps must be taken:

International Atomic Energy Agency should tighten its operations, and monitoring, to stop the fast growing development of nuclear weapons. It should bring a policy to terminate the nuclear weapons from the world.

Along the IAEA, NPT should be implemented without any biased. Non-proliferation Treaty should speed up its operation to prevent the spread of nuclear weapons. NPT should bring all the fast growing weapon state under one umbrella to stop the nuclear risk.

In addition, along with these organizations, the countries in the unstable region, should design a policy to reduce nuclear weapons and ensure the region stability.

The case study of US and Japan shows that how the nuclear aggression and weapon testing of US destroyed peace in Japan.

Similarly the case study b/w India and Pakistan also shows the region stability and prosperity is affected by the nuclear risk and of Pakistan and India.

In conclusion, the nuclear risk is a challenge to peace and destroyed the peace which is established in centuries, in a moment. It is because of the territorial disputes, strategic objectives, and aggression which challenges the peace, prosperity, economic growth, production, and many fields in the world directly or indirectly. There are some measures by which the nuclear risk may be reduced, and peace may be ensure.
