The ascending potency of hybrid warfare being foisted on the state of Pakistan is adding to the security woes of the country? Elaborate with Examples.

### Security

Security mean being safe or secure.

Pakistan's national security mean only the security of its citizens.

Although Pakistan is facing different security threats at national level. These threats includes Traditional and non-traditional security threats

But will

### Security Threats

↳ Traditional Security threats.

↳ Non-Traditional Security threats

⇒ **HYBRID WARFARE / Non-traditional Security threats**

Non traditional security threats include all threats excepts border conflicts or involving militancy Power/ attack.

## NON STATE ACTORS:-

Non state actors are  
- threat to security of our country. As  
our dependency due to huge debt depends  
on different world organizations. Our global  
positioning depends on our policies but policies  
depends on these organizations decision.

For E.g.:-

IMF, World Bank

As we have to take loan by every government  
to fulfill our country need. IMF always  
gives us new conditions like petrol prices  
taxes etc. which intuits towards inflation  
and as well as threat to our security.

As inflation increase will lead to poverty,  
unemployment, more crimes and hence  
result internal threat to our country  
stability and peace.

## Terrorism:-

Our country is facing more terrorism and its hazards than any other which in results effects our country's security. As a sign refugees, Taliban and other illegal teams as AL-QAEDA, TTP are working against Pakistan. These are great threat that ~~are~~ anytime, anywhere they can attack resulting in human as well as economical loss.

## Environmental Effects:-

Environment is caused by different factors and its effect our country security differently.

⇒ As environment change, un-serial rains caused which leads to hazards of crops and in result food shortage. Food shortage leads to Drought. Hence it impact badly on security as security directly related to citizen, and loss of food will leads to human loss.

⇒ Increase in temperature will affect health of human being badly.

## Food shortage:-

Due to climate change temperature of earth increased. Which results in unweather heavy rains and loss of agricultural products and crops.

This impacts from two dimensions on economy and human health.

As crops lost, result in food shortage will lead to drought and result in human loss.

2ndly as crops damaged due to unweather rains country fulfill its needs by importing from other countries will leads to inflation as well as un-employment.

# State Actor's:-

Not hitting the countries borders but direct attack on it goals by lobbying has very adverse effect on country's stability / security.

Any country by lobbying hire its agents from state which work for interest of other country leads to political instability which has badly effected country economy.

PM replaced ~~top~~ the government by lobbying and results in political stability. Since our economy is not growing results in bad GDP growth.

# Cyber security threats:-

Attacking country's confidential data may lead to a big loss for country.

any cyber threat is a big threat any country can face any time. Any country can ~~have~~ access confidential data if once country as its secret projects, its power turning projects and exploit it in different way.

This threat is faced by all countries.

As imp Militance secret project can be hacked and destroyed to destroy once country without attacking on its border.

# Water WAR.

as india is doing as in our border.  
oper's its dam's and ~~tries~~ tries  
its best to harm pakista as  
it is possible. It has many  
effects like:-

- Danger of Flood.
- ⇒ Deficit of Health care facilities
- ⇒ Emergency need of shelter health etc.
- ⇒ Danger of Drough by lossing crops.

All these hazards directly relate  
to economic growth of country
