Pakistan is having a huge amount of troubles in tackling the issues related to security. Hybrid warfare is confusing every leader of Pakistan and even none of the leaders are fully secure for their privacy. Today, one can easily observe the issues related to cyber, even a single person dither to talk secretly and he fears about the leakage of the voices. Phones call are absolutely tapped by ~~her~~ hacker of our Pakistani bigwig. Pakistan is a country where security really matters, otherwise the peace that a muslim country Pakistan should have that is not seen in here.

Security is essential to keep the image of a country and a bigwig and even a common man, save. Non-traditional security is ~~seem~~ deemed ~~as~~ important as compare to traditional. Traditional security is related to the security of Army that is to save nation from any war and to solve related issue wisely. But if one peeps in non-traditional security in which, terrorism, trafficking, narcotics, global warming, heatwaves etc are discussed. If a country is peaceful then he is not going to endure a finger raised against him and from here enmity starts. Pakistan's security is worsening day by day. Privacy of a person from a common man to minister, is not save. Recently bundles of videos are encounter on daily basis, the most from them are against

Imran Khan. The Ex. Prime Minister Imran Khan is beyond the bar that was merely possible by the voices leaked by their own or hacker. In the past when Imran was leading country as a prime minister same types of video were being viral against PML-N and vice versa. ~~TR~~

Pakistan security is an important issue and a Government must stop the hybrid warfare to make country stable and unprecedented. The Future of Pakistan will be stable by executing such strategy that flourish country.
