

Introduction Paragraph Structure (blank form)

Topic Globalization and climate change are interrelated.

| | |
|---------------------------|--|
| Attention Grabber (Hook) | "Globalization and climate change are intertwined realities. The expansion of trade and industry across borders has contributed to carbon emissions and environmental harms, underscoring the importance of aligning economic growth with sustainable practice" (Kofi Annan, former Secretary of the UN) |
| Connecting Sentence | The above remarks by the former secretary of the UN |
| Reflection of the outline | accentuate substantial interconnection between globalization and climate change. The implications of globalization on climate change are worrisome. The globalization accelerates rapid industrialization, leading to increase in greenhouse gas emission. Moreover, the expansion of global trade serves as a catalyst for the growth of transportation networks, subsequently leading to increased energy consumption, notably characterized by a significant reliance on fossil fuels. Furthermore, the globalized world stimulates urbanization which contributes to pollution and deforestation, subsequently disrupting ecosystems and causing imbalance. Reciprocally, climate change also influences globalization. Extreme weather pattern disturbs global supply chain which impacts production of goods in all over the world. Further, it has geo political implications, leading to cross border tension. In a sameway, it attracts environmental regulations and trade barriers. At the same time, |

| | |
|--|--|
| | <p>climate change promotes international co-operation and agreements ^{to overcome} climate change ^{implication} globally. However, the negative consequences of climate and globalization could be overcome through multi lateral efforts. It also requires ^{to} adopt renewable resources globally and explore economic opportunities in green industries.</p> |
| <p>Concluding Sentence/s (Thesis Statement)</p> | <p>In a nutshell, globalization and climate change are inherently interconnected. Both have negative consequence on each other. However, the challenges of climate change and globalization could be addressed through co-operation at international and national level.</p> |

Understanding climate change and globalization

Understanding climate change and globalization requires recognizing their intricate interplay. Climate change, driven by human activities such as fossil fuels consumption and deforestation, transcends geographical boundaries and affects ecosystems globally.
