solutions to protect ozone-layer to save

life from ultraviolet radiation. Similarly, agricultural decline in Pakistan is a problem that needs solutions. This problem of agricultural decline in Pakistan is led by several reasons, chief among which are political instability, that brutally effecting agricultural sector, lack of governmental will to improve it and no investment in enhancing agriculture in Pakistan. Furthermore, more water scarcity leading towards dryness of the agrarian land, use of old-method for cultivation and usage of low quality fertilizers. Not only these problems but farmers are also untrained for modern technology to be applied on the land. These problems effecting Pakistan in many ways like, province-province relations become tense, import increased while export decreased and food shortage that led to

price hike in consuming goods. But like every problem has a solution, in the same way there are many solutions to counter agricultural declination in Pakistan, such as consensus among all political parties for more focusing on agricultural sector, sincerity of the government to improve agriculture, more investment for quality and quantity production and introduction of modern technological methods for farming the land. Furthermore, provide interest free loans to farmers, make availability of quality fertilizers for the crops and more importantly build dams to store water for farming the more land.

How employment increased or decreased in cyber age

In the cyber age the employment has been effected both negatively and as well as positively.

On the one hand employment has tremendously increased in the cyber age due to high number of jobs availability for every one. For example, Global cyber security job vacancies grew by 350-percent from one million openings in 2013 to 3.5-million in 2021, according to the cyber security ventures. This high percentage increase in the job opportunities shows that the employment has increased in the cyber age. On the other hand, the employment has also decreased in the cyber age. World Economic Forum 2020, predicted that 85-million jobs will be replaced by Artificial Intelligence by the year 2025. This depicts that the employment has decreased in the cyber age.

How agriculture in Pakistan is declining that needs solutions

The role of agriculture in Pakistan is considered as the backbone of Pakistan's economic growth. However, the agriculture in Pakistan is continuously declining since past many years due to a number of reasons. For example, according to the International Food Policy Research Institute (IFPRI) in the study found that the climate change is projected to cause a decline in Pakistan's agricultural yields of up to 40-percent by 2050. Another example, according to the Food And Agriculture Organization (FAO) of the United State, in 2010 approximately 1.7-million hectares of cropland were effected by food floods in Pakistan. This clearly shows that Pakistan's agriculture is declining that needs immediate remedial measures to counter it.

and on the hand, the opponent argue that employment has decreased in the cyber world. They say that many people have lost their jobs because all the employee were not expert of information technology. They also ~~argue~~ opine that the labour force has decreased, almost youth is wasting time on social media without learning and many women are inaccessible to information technology because of lack of expertise. Although it is not the fault of cyber age, as experienced people have many job opportunities, majority of the people are employed in the online and there are multiple alternative job opportunities have been created for labour force also due to cyber age. Technology is the best for the skilled and bad for unskilled person and women have also many platforms to prove themselves

in the cyber age. Hence, it is proved that the employment has been in the cyber age.

for miss the future otherwise you will miss

on
it. Similarly the employment does not depend on
a particular era of revolution but the employment
depends on how the youth is prepared and
skilled or unprepared and unskilled according to
the need of this cyber age. However, employ-
ment has increased as well as decreased in this
age of cyber. But employment has more
increased than decrease due to cyber age.
Many people have got online jobs in this
cyber age. Employment has increased in the cyber
age because of there is a boom increase in
the online earning, information technology
introduced new job opportunities, e-trade and
e-commerce have tremendously increased in
the cyber age. Moreover employment increased
due to rise of technology risen the demand of
technically skilled youth and job opportunities
for women have also increased on one hand
