Neglect of enhancing intellectual ability in our education system

Attention Grabber (Hook) :

Caused by a sore throat, once a Persian farmer fell ill and could not look after his Babylonian garden filled with beautiful flowers and a variety of plants. Subsequently, he took extra days to rest, thinking that the mighty garden was capable of standing the test of time. However, his complacency resulted in the complete destruction of the garden, which was in ruins like forgotten dreams. The tragic flaw also triggered a ripple effect by causing massive food shortages.

Connecting sentence :

Just like that, "The Unattended Garden" came to symbolise the phenomenon of neglect, which is particularly more acute in Pakistan's education system.

### Reflection of the outline :

This is clearly being manifested in the perpetuation of a culture of rote learning that prioritises memorization over critical learning. Another glaring effect is the outdated nature of the national curriculum, one that is premised on old pedagogical trends. Moreover, the failure to incorporate new trends is also one factor explaining the tendency of students to think only in binaries. This pattern of thinking is also a major hindrance to pluralism and diversity in campuses. Taking all these factors together, one can easily gauge the gravity of the situation, which can only be addressed through progressive measures. One such step could be the introduction of civic discourses. Another can be the mass adoption of problem-solving methodology through which teachers with licenses can foster an environment of open debates.

## Thesis Statement :

Prioritising intellectual ability in the country's education system has remained an elusive goal due to years of neglect. This phenomenon has made the whole system ineffective to a great extent. However, introducing progressive measures can address existing problems.
