

Mankind faces the Challenges of using Artificial Intelligence responsibly:

Outline:

Introduction:

Thesis statement: Artificial intelligence has become the most dangerous challenge to mankind. Due to over dependence on Artificial intelligence, we face the ups and downs. However, one can control this expanding monster through preventive and controlled measures.

How mankind faces the challenges of using Artificial Intelligence

The Challenges of using Artificial Intelligence.

- a) Increasing Unemployment at the global level.
- b) Students are using AI based chatgpt for cheating purposes.
- c) Human becomes lazy due to over dependence on AI.
- d) Artificial Intelligence can be used to spread political propaganda.

- e) Artificial Intelligence based vehicles can be harmful for human being.
- f) Artificial Intelligence based online scams.
- g) It can be use as a source to steal personal data of a person
- h) Crimes can be increased in a society by using Artificial Intelligence.
- i) It can negatively use to influence world order and peace.

The impacts of using Artificial Intelligence

- a) It can socially isolate the person from society.
- b) People become more dependent on machines.
- c) Person has lack of confidence on his own skills.
- d) Divided the world into different parts on the basis of modernization.

The Way - Forward.

- a) Government should make strong policies regarding the use and

Implementation of Artificial Intelligence.

b) ~~the~~ ^{aware} the people about the ~~seams~~ and the challenges of using Artificial Intelligence.

c) Approach major organizations to understand the real concept of Artificial Intelligence.

d) Collaborate with developed countries to control this monster.

Conclusion:

Essay:

The world had faced the challenges of different form throughout the history. The introduction of every new technology has been increasing the challenges for mankind. "Nuclear weapons" was the new technology which destroyed world peace. The destruction of Hiroshima and Nagasaki had proved that every change is not good for human being. Similarly, the introduction of Artificial intelligence has long term effects on human life.

like increasing unemployment and cheating culture among students clearly show that how much we became dependent on Artificial Intelligence. Moreover, it is being used as a source to promote political agenda, online scams and crimes. Artificial Intelligence based vehicles are not trustful. Furthermore, hackers use it to steal personal information of a person. In addition to this, Artificial Intelligence can be used to destroy world peace. Consequently, we are facing negative impacts of Artificial Intelligence such as a person becomes socially isolated, over dependent on machines and lack of confidence on his own skills. It also divides the world. But it is never too late, government should make strong policies regarding AI uses and implementations. Furthermore, aware the people about AI based scams and challenges. In addition to this, government should approach organizations and collaborate with developed

countries to control the spread of Artificial Intelligence. Artificial Intelligence has influenced the mankind at different levels.

Artificial Intelligence has become the most dangerous challenge to mankind. Due to over dependence on Artificial Intelligence, one faces the ups and downs. However, one can control this expanding monster through preventive and controlled measures.

The mankind faces the challenges at different levels. Whether these challenges are hidden or not but these challenges have enough potential to destroy the mankind. In this new era of modernization, where AI has just grown, one has negatively influence by the challenges of AI. Different social media platforms are talking about the spread of AI but unfortunately today we have no permanent solution to solve this problem because if one person's life

is negatively affected by AI then on the other hand, it prove beneficial for another person at the same time. For example, if expanding of AI causes unemployment in the country then at the same time it is beneficial for AI based companies because now they do not need to give salaries to the employee. In this way, AI has become the biggest challenge for today's world.

Employment is a source of income in every house. But unfortunately after the introduction of AI, the rate of unemployment is increasing day to day. In US, 7.5 million people became unemployed due to introduction of AI. (Down, Increasing unemployment in the USA, 2022). This is how one can see that online store such as daraz, ebay, amazon etc are using AI bots to increase

their products values which ultimately cause unemployment because humans are replaced by AI bots. In conclusion, AI is the major cause of today's unemployment.

There are several major challenges of AI but one of the most important is the promotion of cheating culture among the students. Like in this modern era, students are not confident about their critical thinking and just focus on AI to complete their assignments, tests, quizzes etc. ChatGPT is one of the most important example in this regard. ChatGPT is the most efficient tool which has a potential to answer any query in just a minute or even a seconds. Students are just finding shortcuts to complete their tasks using ChatGPT. In this way, AI has promoting cheating culture

Human became lazy with the advancement of AI. They become more and more dependant on Artificial Intelligence. AI based machines are more efficient, accurate and fast that's why people like to use them instead of doing their tasks manually. This laziness can effect the human physical and mental health. Lazy person has nothing to do in this world. In this way, AI has become the source of human laziness.

The most important challenge faced by the today's world is the spread of political propaganda through the use of AI. Different political parties are using AI-based social media platforms to influence the mind of the people and to achieve their goals. In 2015, US presidential elections was also influenced by this kind of propaganda. In US,

Beate won the election by spreading partial propaganda throughout the country using AI-based politically controlled social media platforms. So, in this way, one may see that how AI has been using to spread political instability.

AI has introduced advancement at different levels, one of which is the introduction of AI based vehicles such as cars and buses. These vehicles replaced the manual drivers. AI based vehicles are not more efficient as compared to human driver. If these vehicles are failed to recognize any situation or condition then it can cause a serious accident which can harm the human life and leads to death. In a nutshell, AI-based vehicles are not more efficient as compare to human being.

The another challenge which is faced by the world due to introduction of AI is the enhancement of online scams. The countries which have high poverty rate, are most affected by these scams. In India, high ratio of scam cases were reported due to online scams. Hackers use AI-based tools to interpret voices and messages of different persons to get money. It is also used to blackmail the person. In this way AI has become the platform of online scams.

There are several challenges which are faced by the today's world regarding the use of AI but the most dangerous challenge is to steal the person's personal information by the hackers. The people who are unaware about the use of AI have easily become the part of this scam. The hackers stole their

personal information by
hacking victim's social media
accounts and blackmail him
to pay money to secure ~~to~~
victim's own personal data.
In this way, it became
the major cause of online
scams.

Every advancement comes
with the destruction. Criminals
use AI based tools in
the form of website nat-
ification to promote criminal
activities. In the dark web,
criminals use AI-based
virtual reality techniques
to promote criminalization.
Criminals use these platform
to promote terrorism,
~~and~~ bomb attacks etc. These
all activities are against
the humanity. In this way,
one may see that how
AI become uncontrolled
monster.

Furthermore, the world order
and peace is also destroyed.

by the use of artificial intelligence. Different countries are making AI-based weapons such as missiles, rockets etc to make its influence in the world.

The term "Balance of Power" has escalated this culture. Every nation has invested large amount of its GDP to make AI-based weapons. Super power like America use its technological power to promote its interest such as America used nuclear weapons against Japan in the end of world war II. Therefore, the world's peace has destroyed by the AI-advancement.

AI has negative impact on human life such as it make a person socially isolated. Like, in today's world, most of the things are replaced by the machines which negative effects the human life. Person has no interest in

his daily life activities and ultimately he become suffer from physical and psychological disorder. Human daily life activities make him healthy. In a nutshell human life become isolated after the AI - introduction.

The another negative impact is that people become more dependent on machines. Even to make a simple assignment, students are using online tool to complete their tasks. This can negative impacts their critical thinking. Moreover, people do not want to go for a walk, they use car or motor bike even to cross a very small distance. In this way, people become more dependent on machines to complete their tasks.

The lack of confidence is one of the most

negative impact on human life. People believe that they are not capable for their work. They need AI-based robots such as AI based vehicles in US to travel from one place to another. In a nutshell, people have lost confidence in their own self due to introduction of AI.

AI has played a major role to divide the world into different parts on the basis of modernization. The modernized nations such as Russia, Japan and the USA has more power and influence as compare to under developed nations such as Pakistan, Bangladesh etc. In this way, this gap has introduced by AI.

To solve these issues and challenges, government should make strong policies

regarding the use of AI. It is not possible for one person to make a change. It is the possibility of a government to make policies to prevent the further challenges of AI.

Every nation needs to aware about the people about the AI based gains and challenges. Country should introduce AI as a field to educate a aware about the pros and cons of the use of AI to the people. AI should be introduced as a field in colleges and universities to aware people. Different social media platform can also be use for this purpose.

There are several international organization which have close links with the AI such as

Elon Musk's Tesla Company
This company makes AI
based cars. Pakistan needs
to collaborate with
these kinds of companies
to properly understand
the real meaning and
usage of AI.

Pakistan is an under
developing country with
an extreme economic crisis.
Pakistan needs to collaborate
with some developed
countries such as the USA,
Japan etc to advance
it technology. Pakistan
should need to sign
various long-term projects
with these nations. India
is advancing its technology
with the collaboration
with the USA.

In a nutshell, it is
never too late to control
this situation. Pakistan has
a potential to stabilize its
situation. In the past, Pakistan

has managed to overcome its problems. If ~~the~~ properly government properly make policies & responsibility the use and implementation of AI then it can easily aware the people about AI. Social media platforms and campaign can play a major role in this regard. Furthermore, Pakistan should approach international organizations and companies to understand the real purpose of AI. Moreover, the developed countries such as the ~~the~~ USA and Japan can be helpful for Pakistan if they sign AI-based projects with Pakistan.

"Nothing is good or bad, it is the person who makes things good or bad."
