

0 Online education has given more opportunities than challenges.

### Outline

1- Introduction: Thesis statement:- Online education is a huge opportunity. In fact, online education has facilitated education such as, safe education for girls and housewives, and convenient education for the youth. Therefore, online education has more opportunities than challenges.

2- Online Education: A huge opportunity

3- What are opportunities of online education? (Thesis)

- a) Online education has provided the safe environment for girls.
- b) Online education has facilitated education for the youth
- c) Housewives have approach to receive higher education

d) The issue of distant education is removed through online education

e) Online education has convenient examination pattern

4- What are challenges to online education? (Anti-Thesis)

a) Online education has restricted the mobility of girls

b) Online education is difficult in managing for the youth along with their jobs

c) Housewives are deprived of physical interaction due to dependency on online education

d) The poor access to internet has encouraged traditional education learning

e) Tricks of cheating are challenges to online education

5- How online education has more opportunities than challenges? (Synthesis)

a) Restriction to girls' mobility is not concerned

with online education, but online

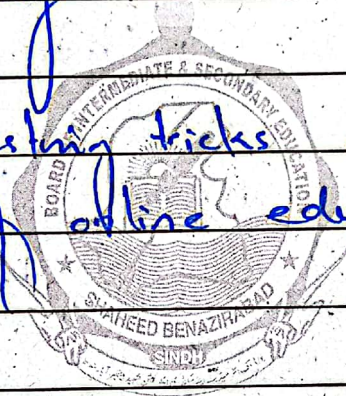

education has encouraged girls' safety

b) Online education has fulfilled the dream of higher education of the youth along with their jobs

c) Online education has also provided online interaction learning like physical cooperation

d) The globalized world has improved internet quality = the success of online education

e) Fear of cheating tricks does not affect opportunities of online education

"Online education has an opportunity to increase literacy rate across the globe." (The UNICEF, 2019)

Online education is a huge opportunity.

In fact, online education has facilitated education such as, safe education for girls and housewives, and convenient education for the youth. Therefore, online education has more opportunities than challenges. Moreover, online education

has ensured safety for girls' education, and has provided opportunity to the youth in receiving higher and convenient education. Further, online

education has encouraged housewives to receive higher education at homes.

Not only this, but online education has replaced the fear of distance and has modern examination pattern.

Besides opportunities of online education, some claims are against online education such as, restriction to

girls' mobility and is claimed difficult for the youth along with their jobs. Moreover, housewives are away from physical participation. Further, poor internet access is hurdle in online education and examination through online has risk of cheating tricks. Despite above claims, online education has provided more opportunities including safety of girls in education, fulfillment of higher education dream of the youth, and facility of online interaction. Along with these, improved internet quality has further encouraged online education and the examination pattern has no affect over online education opportunities. Therefore, online education has more opportunities than challenges.

Online education is a huge opportunity today. The world is

globalized and online education is become more convenient in the world.

In fact, online education has facilitated the talent of the youth across globe.

According to a reports,

"Google has announced about 5,000 scholarships for the youth in facilitating online education"

(- Faisal Bari, digital learning, 2022)

Therefore, online education is a huge opportunity today.

Among the opportunities of online education, the safe environment for girls' education is come true.

In fact, girls' can receive education without any fear of insecurity. Online education has encouraged girls' education along with their safety. According to a survey, "About 30% of girls are receiving online"

education due to safety of environment." (Neda, global safety, 2023)

Hence, online education has provided safe environment for girls' education.

Along with girls' safety, online education has facilitated higher education for the youth. The youth of today are more engaged in their jobs due to their social needs. However, online education has facilitated their education along with their jobs.

Almost 37% of the youth are receiving the higher education along with their jobs.<sup>20</sup> (The UNDP Report, 2022). Hence, online education has facilitated education of the youth.

Moreover, housewives have also approach to receive higher education along with their home responsibilities. In fact, housewives women were deprived

of higher education due to their burden of responsibilities. But, fortunately online education has also provided them an opportunity to receive higher education. According to the latest update, "Almost 52% of women have approach to receive higher education due to technological availability in Pakistan." (Neda, Gender and technology, 2023). Therefore, online education has also provided support to housewives in their higher education.

Further, the distance problem in receiving quality of education is removed through online education. In fact, online education has provided quality of education with any fear of distant. The distance has no value in online education any further.

According to a survey, "The most of the youth were deprived of education due to distant approach."

(Huda Saloom, reforming education, 2006)

Thus, online education has replaced the fear of distance in receiving quality of education.

Furthermore, online education has certain modern examination

patterns. In fact, online education

has given convenient sources of online examination process. Consequently, online

education examination patterns have improved equality of education. As

per survey, "Online examination pattern

has tendency to digital approach and has ensured security of paper

out issue." (Zubaid, Mustafa, online

education, transforming education, 2011)  
Therefore, online education has quality of examination patterns.

However, certain challenges are also claimed, such as, fear of girls' mobility restriction is prevailed due to enhancement of online

education. In fact, online education is accused on the name of girls confinement at home. Online education is become a challenge in women's freedom to movement. "Online learning has confined girls and women at their homes." (Neda, Gender and Technology, 2003). Hence, online education has a challenge to mobility of girls.

Along with girls' mobility, online education is become difficult for the youth along with their job management. Almost youth are in confusion due to unaffiliated management of online education with their job timings. Online education is become a challenge to the youth in receiving higher education.

According to the report, "About 128 million youth in Pakistan manage difficult online education along with their jobs." (The UNDP Report,

2023). Hence, online education is taught for the youth along with their jobs.

Further, housewives are only depend on online education that leads to deprivation of physical interaction learning. In fact, housewives are away from reach of true educational interaction due to relying on digital learning. About all women as housewives are discouraging online education on the name of lack of physical meeting and cooperation. As per reports, about 0.6 pc of housewives are away from online education due to lack of physical interaction in online education (Neda, gender and technology, 2023). Therefore, online education faces a challenge of physical interaction.

Furthermore, poor internet access has prevented the concept

of traditional classroom learning than online education. In fact, the third world countries are still deprived of quality of internet access.

Online education has a challenge of quality and access of internet across the globe. According to a report, "only 0.4 pc of women have internet access as compared to 62 pc of males." (Zubaid Mustafa, global Diversity, 2021). Hence, the poor and lack of internet access is become a challenge to online education.

Moreover, online education has a challenge of various tricks of cheating in the examination pattern. In fact, online learners are facilitated the secret of cheating tricks. Tricks of cheating in online examination is a threat to quality claimed digital education. According to a survey, "Almost you'll

are concerned in online examination due to tricks of cheating and glorification of results." (Faisal Bin, reforming education and system, 2020). Therefore, online education has a challenge of 'cheating tricks'.

Despite above challenges, online education has more opportunities than challenges prevailing. As online education has no concern with restriction of girls' mobility, but online education has made girls' education easier and safer. In fact, online education has encouraged girls' education by providing safe environment at their homes. Girls' education across the globe is promoted due to online learning opportunity. According to a survey, "girls' participation in education is become safe across the globe and rate of literacy of girls' education is increased."

(Pakistan Measurement and Social Standards, 2019). Hence, online education has provided safety encouragement of education to girls.

Along with safety of girls, online education has fulfilled the dream of higher education of the youths. In fact, the youths wanted to seek higher education along with their current job performances. Almost youths are getting higher education while performing their jobs. "Almost more than 30% of the youths are observed in receiving higher education after their job timings."

The UNDP Report, (2021). Therefore, online education has made dream of the youths of higher education true.

Moreover, online education has provided an opportunity of online interaction in digital learning. Online education has replaced old traditions

not pattern of physical interaction with new, modern online interaction platform. In fact, online education has provided better opportunity of online interaction and cooperation to women, girls, housewives, and youth. According to a survey, "It is observed that online learning education has more potential of interaction than traditional classroom learning patterns." (Faisal Bani, the higher education, 2020). Hence, online education has better online interaction opportunity.

Further, the globalized world has facilitated internet access across the world - the success of online education evidence. Online education was blamed on the name of poor internet access across the globe. Except at few places, online educational system is successfully

prevailed in the world. "Japan has presented small digital applications to enhance online education through 5-G internet access." (Neda, Global Skills, 2022). Thus, online education is successfully prevailed due to improved quality of internet and access to internet in a globalized world.

Last but not the least, online education opportunities are not affected by ticks of the examination patterns in digital learning. Online education has better examination process along with fixed time management. Resultantly opportunity to cheat in online examination is very low. "Examination pattern in digital education is restricted up to timetable." (Hussain, the examination reformer, 2020). Therefore, ticks of examination cheating have no affect on online education learning.

To sum up, online education is a huge opportunity today. In fact, online education has encouraged education in the name of girls, safe environment, the dream of the youth in receiving higher education and convenient education for housewives.

Moreover, online education has quality learning education pattern due to quality of education facilities and access to internet.

Besides all above, online education has replaced old traditional examination patterns with new, modern technical system and patterns. Therefore, online education

has provided more opportunities and has very few, countable challenges. Hence, online education is a platform of opportunities of learning.

'The world literacy rate is increased and will be promoted due to access to digital education.'

(-THE UNICEF, 2022)
