

Q2

Intro

Q2
 Intro
 The rapprochement between Kingdom of Saudi Arabia and Iran is a diplomatic win for China and showcasing the soft power to the world. This peace deal has significant socio-political implications in the Middle East and Elaborate rapprochement

2 Socio-political implications on Middle East.

a. Stability in Middle East:

Both of the powers are involved in Middle Eastern crisis. They both fought each other using proxies. An apt example is of Yemen. As per UN, more than 350,000 have been killed in the war in Yemen. Improved relations between two countries could potentially cool down tensions.

Rephrase to echo impact

b. Energy market:

Both are major oil producing countries in the region. However, Iran has been targeted for trade by US-led sanctions. If the rapprochement proves to be a success then the oil prices and global energy market may stabilize.

c. Shift in regional alliances:

Prior to the success of rapprochement by China, both the parties

were involved in fighting each other and forming alliances against each other.

For example, in 2017, Ryad intersected a ballistic missile over Ryad International Airport, asserted that it was supplied by Iran to the Houthis rebels. Another important message sent to Iran was the killing of Qasim Solemani by a US drone attack and the Saudi media celebrated the attack.

Add more
Socio-political implication on Pakistan:

Pakistan has historically maintained peaceful and balancing act between Iran and Saudi Arabia. The reason is that any developments in these countries affect Pakistan. Some measures that Islamabad should follow:

1. Engage with both:

A country like Pakistan shall never take sides and only work for fulfilling its national interests. Furthermore, Pakistan has historical ties with both countries and Pakistan should help in conflict resolution.

2. Promote peace:

Islamabad should advocate for greater peace in the region and focus on collective security mechanism. Furthermore, Islamabad

should encourage organization of Islamic cooperation to lessen the tension between two parties and foster stability and cooperation in the region.

Economic ties: Pakistan can get benefit from exploring economic opportunities in middle east. It is evident that China's aim is to manipulate the market of middle east, import cheap oil and sell its products using CPEC. This is for sure will promote and expand trade relations and economic cooperation can offer incentives for regional stability.

In conclusion, Iran and Saudi Arabia agreement is a huge success for China and its role. Moreover, the agreement will end years long conflict and peace and role will boom once again in the region.

Q5:

India:

The revival of militancy in Pakistan can be associated with many factors.

These factors are external and internal factors which helps the militant groups to reform and fight against the state of Pakistan. Some reasons are:

Reasons:

- a) weak government and political instability:
weak state institutions and political crisis have worsen the country beyond imagination and make it ~~poor~~ to do attacks. On 1st June, Pak-Man border, army personnel ~~were~~ were martyred. In the midst of June 2023, another attack on military checkpoint in Sittka ~~area~~ several dead. This is evident that ~~weak~~ rule of law, political instability have created spaces ~~from~~ for militant groups to operate with impunity.
- b) Regional conflicts:

unfortunately! the geography of Pakistan is a blessing and a curse at the same time. ~~we~~ in a sense that we are surrounded by those countries where all militant groups are always at dagger drawn to one another. For example, Afghanistan, where the defected rulers are Afghan Taliban and they are fighting against ISK chapter. They were spread over into ~~Pakistan~~ Pakistan, and preparing a ~~base~~ ~~land~~ for militancy.

c) Ideological factors:

Pakistan has many ethnic groups. predominantly, Shia muslim and Sunni muslim. They both have ideological

differences since the advent of capitalism. Moreover, the institutions where they reside are responsible for the rise in militancy as well, because the brainwashed the young minds and use them for their previous purposes. For example, the recent tragedy in ~~Pakistan~~ Patah Chinar, a bordering area with Afghanistan, where the two sides are fighting against each other and killed a dozen from each group.

Implications

a Regional instability

militant groups operating from one country have regional ramifications. For example, Afghanistan's alleged support for TTP and their involvement in a 2008-border attack in Pakistan has been a point of contention between Pakistan and Afghanistan, leading to conflict like situation.

b Impact on education:

militancy impacts education system and promotes extremist ideologies, affecting the country's education and spread far. For example, attack on Army Public School, Peshawar and attack on Bacha Khan University, Mardan, resulted

in loss of lives and highlighted the vulnerability of educational institutions to terrorist attacks.

c Security concerns:

The use of militancy not only pose a threat to regional stability but also the image of Pakistan is affected. This resulted in loss of tourism, capital flight and a reign of terror is imposed. For example ~~the~~ a attack on Pakistani national cricket team had resulted billions of loss of Rupee to Pakistan cricket board.

d Recommendations:

a Promote socio-economic development: Islamabad should focus on uplifting the marginalized ones because the marginalized people are more easily manipulated by the radical groups. For instance the people of Baluchistan, and KP are targeted easily by the enemy of the state. So, Pakistan should encourage investment in underdeveloped areas to create economic opportunities.

b Regional and international cooperation:

Pakistan should utilize the international and regional platforms and also collaborate with neighboring

countries do tackle the terrorism. For example, Pakistan should join Regional anti-terrorist structure which fights against these evils.

c. Eliminate online Radicalization.

Addressing online radicalization is crucial in combating the spread of extremist ideologies and recruitment by militant groups. Pakistan's government and tech companies should collaborate and use content moderation algorithms, AI-driven tools, and user reporting mechanism to remove extremist content swiftly, so that online search of radical ideologies can be controlled conclusively. revival of military in Pakistan is mainly due to weak government institutions and political instability. There should be strong emphasis on socio-economic development, improved governance, and proactive security measures.

Q 6

Ans

Pakistan plausibly faces few extreme water related situations: floods and water scarcity. Both are interconnected and arise from a combination of natural and human induced factors.

2

Factors:

a) Climate changes

Climate change has unleashed all the negative outcome on Pakistan. Due to which, now ~~the~~ Pakistan is witnessing extreme weather patterns, including floods.

For example, the floods of 2022 which inundated half of the plateau, destroyed infrastructure and \$30 billion were lost and also millions of people across the country were affected.

b) Deforestation and land degradation:

Pakistan has less than 5% forest cover (WWF, Pakistan). Every year thousands of hectares of forest is destroyed for making room for human settlement. This, however, leads to land degradation and land degradation means reduced water absorption capacity and due to lands do intensified floods and landslides.

c) inadequate drainage infrastructure:

The drainage infrastructure is outdated. Daily, new settlements are being built without proper environmental impact assessment. For example, the largest city, Karachi, has experienced frequent urban flooding almost every year during monsoon season. The reason is outdated drainage

system and encirclement on natural drainage channels have led to waterlogging in various parts of the city.

3. Factors responsible for water scarcity:

a. Population growth:

According to World Bank, Pakistan population growth is 1.8% annually, having below finds and climate. The current population is 281 million and the water per capita is less than 100 GAF. As the population grows, the demand for water for agriculture, industry, and domestic use rises. Leading to depletion of water resources.

b. Agriculture water use:

Agriculture water use for the land is a need but also mismanaged by the authorities. 96% of the country's water is used for agriculture where around 40-45% is wasted due to traditional methods: furrow and basin irrigation system. Water-efficient practices, such as drip and sprinkler irrigation, remains limited, thus contributing to water scarcity.

c. Over-extraction of water from aquifers:

Pakistan is mostly semi-arid and rely nearly on ground water

Qno 2-
1-Introduction
2- Manifestations of Revival of Militancy
3- Reasons of revival
4- Policy Recommendations
5- Analysis (could add the current positive developments)
6- Conclusion

In these areas, afforestation, water availability
communities and ecosystems.

Q 4-
1- Introduction
2- Overview of global financial super cycle
3- Reasons for this cycle 4-5 points
4- Implications on Pakistan 4-5 points
5- Recommendations for Islamabad to follow 4-5 points
6- Conclusion

Resource management should be implemented and ensure equitable access to water.

Q 5- Introduction
1- Irrigation system needs upgradation. water-
2- overview of Ukraine War
3- Possibility of continuation of west lead order 4-5 points
4- Possibilities of decline in west lead order
4-5 points
5- Analysis on which possibility is more likely
4-5 points
6- Conclusion

Develop and implement climate change
adaptation strategies to cope with changing
flood patterns due to public awareness about the
importance of water conservation and
flood preparedness.

Q7- Introduction
1- International community should assist
2- Manifestations of US, India partnership to contain China 4 points
3- How it would adversely impact Pakistan 5-6 points
4- Recommendations for Islamabad to follow 6-7 points
5- Critical Analysis
6- Conclusion

Global warming and climate change
are both interconnected and cause
mainly by humans. By implementing
G-20 conference in Indian held Kashmir - an overview
Objectives of India 5-7 points
options for Pakistan to follow
Conclusion

these recommendations, Pakistan can better manage its water resources, reduce the impact of floods, and ensure sustainable water availability for its growing population.
