ONLINE EDUCATION HAS GIVEN MORE OPPORTUNITIES THAN CHALLENGES  
OUTLINE: →

No definitions in introduction

and things alike. Online education system is a hybrid form of traditional educational institutes where people tend to learn and educate others at a distance that is virtually the mechanism of e-learning has evolved over time and developments have been made with the advancement in technology and needs of masses. The opportunities include the advantages and productivity of this e-system where things have been made possible by virtual reality and artificial intelligence assistance. Through technology, the already renowned global village is now much more compact due to the faster and easy accessibility of the online system. Masses tend to incorporate the usage of this advancement in their everyday lives in order to catch up with the world's pace. However, side by side with the pros of e-learning system, cons also take their part in dealing with different circumstances. Where the world has been shaken even more with the fastest approach of online education system, the rise in false and unproved knowledge Dayman knowledge has also been observed majorly. But the good news is, the opportunities being in bulk are able to suppress the challenges in one way or the other.

No structure to the introduction

expression

Thesis statement should be 2-3 sentences

In today's world, online education system is not restricted to google scholar, <sup>and</sup> several education based website only. It's a fullfledge system consisting on virtual class rooms, examination centers and an environment where students learn efficiently. Several different applications have been designed in this manner to help out the masses in making it effective. A research shows that there is a high rate of retention with online learning than old school method (Terrell Christians, reasons why online learning is effective, 2022). Hence, the online systems are catering in their best possible ways to contribute to the society.

With the passage of time, we have seen a drastic increase in online portals with better facilities for the users. Including zoom, Google meet, Microsoft classrooms and many others, skype and whatsapp are beneficial in this aspect too. With the weak connection they play their part in delivering the content faster. Over more than 25 trustworthy, user friendly and efficient applications are working in order to cater online education system (digitalclassworld.com, Education world, 2022). Therefore, with the increase in apps, the rise in online education system is also been witnessed.

World has encountered many pandemics before but the covid-19 has shown the other side of the future. On one hand, the world totally became static and on the other hand, people made it possible to switch toward online system in order to survive. Before covid 19 there was already a high growth of technology adoption where pandemic made it more evident (World Economic Forum, 2020). So, pandemic has worked in making the world more digitalized by its remarkable shift towards online system.

irrelevant

E-learning system ~~or other~~ has been adopted wholeheartedly. Its convenience, faster approach and easy access has been its power since day one. It is evident that one has to move forward at the advancement in the surroundings including technology. E-learning systems are considered to be a better choice where masses are more interested in utilizing their time efficiently (Vasile Rusnac, Online higher education, 2023). Hence, e-learning ~~has~~ due to its higher adoption rate has ~~been~~ proved to be beneficial in multiple ways including its faster approach.

topic sentence should indicate what the paragraph is about

no relation to the topic or argument

The topic sentence should use topic appropriate language and directly address the argument. Use the wording mentioned in the outline

Online Education system has also contributed alot towards one of the most serious issues we are facing i.e. Unemployment. It has ~~been~~ is indeed a launching platform for so many in order to work out <sup>the</sup> best of their abilities to meet the basic needs. The more the e-classroom platforms are, the greater will be the hiring/employment chances (researchgate, 2020). Thus, e-learning mechanism is indeed an e-employment platform as well.

This gives the idea that e-learning system has brought about a brighter and wider perspective of freelancing. From being online tutors to being online supervisors, mentors and guide, this system has not only benefited the masses in terms of providing jobs but the students are now being accommodated in a better possible way. Several websites including FIVERR and UPWORK are providing their way for building better profiles and scoring jobs. Therefore, it's not just a single sided approach, but masses are being benefited in one way or the other.

Repetitive

There comes another major dimension of e-learning system i.e. budget friendliness. The physical setup are requiring proper uniforms, books in hand, and other basic requirements like transportation fee which altogether is heavier for masses. Online system ~~is~~ <sup>deviates from the pocket friendly aspect</sup> is just a click away whether you're doing you.

house chooses or managing it while driving. The concept on e-books, e-exams have further elaborated the budget friendly approach of e-learning (Finance Monthly, 2022). Therefore, masses are adopting it at a rapid pace.

Do not start a paragraph with an example or a reference

In a book "Empowered at a distance", the writer expressed his vision on shifting and adopting hybrid and remote learning system. This can be attained only when a person is ready to bring a change as per the need of time. The sudden decline in the pace of the world due to pandemic have effected masses around the globe badly but only those who wanted to get back to normal compensated their loss by focusing more on the new normal. Though changes are brought for better outcomes and to compete in this modern world efficiently.

E-learning has provided better communication channels where the advancement in media has also observed to make it more friendly. The inclusion of video chats, feedback mechanisms and virtual formal meetings has made the world <sup>have</sup> what was already a global village a much more rapid phenomena. The delivering and receiving of data while making the best out of it is essential. Hence, e-learning mechanism is not only a budget friendly system but has shrunk the world even more.

what is the argument in this paragraph? How does that relate opportunity provided by online education?

The concept of digitalization was the need of time. This was only accelerated during pandemic when one has to survive amid the crisis. E-learning through digital world has contributed towards quality education because anyone from around the globe having internet access can have hands on anything worthy Coreilly therefore, online systems where online teaching education system has been designed are proving their worth during this modern era.

No clear argument, no structure  
too many unnecessary details

The future of online-learning system too has 2 different sides where the opportunities suppress the challenges that are lesser and manageable in numbers. Empowering souls that too at a distance isn't easy and when it comes to different feeding different minds from different backgrounds is itself a task. But here, the major emphasis is to be drawn on the abilities of a teacher doing his job online. Controlling abilities of an individual can be beneficial in this regard.

use formal expression

Incoherent paragraph

The challenges are nevertheless less as compared to the opportunities, at the same time they cannot be ignored. The faster the digital concept is, the greater the difficulties will be. E-portals have always been a matter of issue

when it comes to the concept of viruses. The attack can be destructive as it may be damaging to the overall system. Therefore, one has to be prepared in order to deal with such circumstances.

Example?

The lack of infrastructural facilities including systems, laptops, sufficient amount of softwares, constant electricity, faster internet is itself a debate. These are readily available in public libraries and forums in developed countries but when it comes to developing nations like Pakistan, we lag majorly behind (Nilesh, challenges of online Education, 2023). This implies that one has to be self equipped in order to meet the demands of digitalization and most importantly digital class rooms.

No quantitative data to prove the argument

In a book "Overcoming challenges in online learning" the writer Areej examines the distinct aspects of the pandemic covid-19, where the one that was drastically adopted is online portals. According to her it's not only challenging for the students but for the teachers along with coordinators and administrative staff where management becomes a task in times of challenging situations. One has to be prepared beforehand in order to deal with challenges like poor connectivity, lack of resources, and many more alike. Hence, challenges too can be

No structure

the need of new normal to counter frustration and aroused level of stress for better productivity.

likewise, the increased screen time and lack of physical activities is another debate when it comes to the challenges faced by online learning system. Increased screentime is not only due to the e-learning but besides it other social networking sites consumes the time of individuals. ~~Resultantly, the physical activities and interactions have been dropped.~~ This not only effects the mind and brain but the whole body where steadiness effects the energy and fails to boost up minds and moods (NIH, 2021). Therefore, increase in the usage of screen is directly propositional to the lack of physical exersion.

One argument  
one paragraph

To simup the overall discussion regarding the major pro's and minor con's of the online education system, it should be made clear in every possible way that like two side different sides of a coin, everything in the world has two different aspects as well. Its just the usage tackling/handling ability and most importantly minds that create difference and create cons out of pros. The concept of digital learning institutes is not a harmful one, it was indeed the need of time when the world became static as a whole. With every ease, challenges. there should be a slight difficulty that can be managed considering the influential and beneficial outcomes. The opportunities of online education system as a whole

Don't go back and forth with the opportunities and the challenges. there should be a linear flow to your writing

are undeniable. From being easily accessible to budget friendly, convenient and more influential/emphasizing, ~~eg~~ the online education portals have made their way in proving to be a positive contributor towards this developing world. Moreover, its weaker aspects are minor in numbers that are easily suppressed under the umbrella of its positive, productive and opportunities based nature. On one hand, it has saved the time in such a manner that learning can ~~be~~ happen at a distance i.e. its portable nature. One does not have to move to or from in order to attain knowledge and on the other hand it has made the masses immobile where they are now relying more on technology than on hardwork. Hence, to summarize, according to Stanley, "With great powers comes great responsibilities" - it should be kept in mind that e-portals are a huge power with which huge responsibility comes ~~to it/with it~~ with respect to its usage, efficient handling and effective approach.

No challenges discussed in the conclusion, Very incoherent

#### Suggestions:

Structure your paragraph.

Study the structure of outline.

Discuss one argument per paragraph

Keep in mind one sub heading in the outline = one paragraph

You need you quote or paraphrase relevant part of the study you reference in the paragraph.

Keep a balance between qualitative and quantitative data you include in the essay

	<b>Category</b>	<b>Total marks</b>	<b>Obtained marks</b>
