

NAME - Shoaib Khalid **ESSAY**

LMS ID - 28296

Batch - 331

Despite its urgency, climate

crisis remains the most neglected  
cause

## Outline:

### 1 - Introduction

Thesis statement: climate crisis is one of the major problem that the world facing. climate crisis is the result of human activities, ~~burning~~ fossil fuels and carbon emissions etc.

Does not address the topic

2 - How climate crisis remains the most neglected cause

That is your entire topic. Don't limit it to just one paragraph

### 3 - Why climate crisis increasing

- (a) - Green House Effect ~~X~~
- (b) - Depletion of ozone layer ~~X~~
- (c) - Deforestation ~~X~~
- (d) - Rapid industrialization ~~X~~
- (e) - Solid waste ~~X~~
- (f) - wild fires
- (g) - Burning fossil fuels

### 4 - Effects of climate crisis

#### (a) Effect on social life

- ① migration
- ② Economic impacts
- ③ Social inequality

No further subheadings

#### (b) - Effect on environment

- (1) melting glacier
- (2) Rising sea level
- (3) increasing flooding
- (4) increasing temperature

3(C) Effect on human health

- (1) Increase death Ratio
- (2) Health Problems
- (3) Disease

(d) - Political effects

(e) - Effect on Agriculture

5 - How is Pakistan affected by climate crisis?

5 - Suggestion to mitigate climate crisis

(a) Transition energy sources

(b) - Control Population

(c) - Forestation

(d) - Awareness through education

(e) Cut the carbon emission

7 - Conclusion

Your headings should be in phrase or sentence form not just one worded

Misinterpretation of outline.

The topic is about the increasing threat and devastation of climate and despite being such a critical cause why aren't the states doing anything to control it.

## Introduction?

Ozone depletion is the major reason for climate crisis. The depletion of ozone layer has serious problem for human health and the environment. One of the main cause ~~for~~ of ozone layer depletion is the release of man made chemicals called Chlorofluorocarbon (CFCs). CFCs, which is mostly used in refrigerator and industrial cleaning products.

Irrelevant to the topic  
Also Ozone hole is on the way to recovery, so you cannot add it to the current crisis

Deforestation is the major reason of climate crisis. When trees are cut down, the carbon stored in the trees is released into the atmosphere, contributing the global warming.

Irrelevant to the topic

Rapid <sup>urbanization</sup> industrialization is responsible for the climate crisis. As more people migrate to cities, there is greater demand for energy, transportation and housing, which can lead to the higher green house gas emission.

Irrelevant

Solid waste is the garbage waste which we produce. It can contribute to global warming when we dispose of solid waste in landfills. It breaks down and releases methane, a potent green house gas when solid waste is burned or transported. It can also contribute to green house gases emission.

Write in 3rd person always

Irrelevant

Wild fire can contribute to global warming by releasing green house gases into the atmosphere. When forests and vegetation burn, they release carbon dioxide and methane, that contribute to climate crisis.

Irrelevant

Also all of this discussion is general. There are no verified facts that support your argument

Fossil fuels are major contributors to climate crisis. When we burn coal, oil and gas we release carbon dioxide and other green house gases into the atmosphere, which trap heat and cause the earth's temperature to rise.

Irrelevant

Industrialization can contribute to global climate crisis. Industrialization has led to an increase in the emission of Green house gases, such as Carbon dioxide, methane, and nitrous oxide, which trap heat in the earth atmosphere and contribute to global warming

Irrelevant

Climate crisis can cause rising sea levels, changes in weather patterns, and the extinction of species, among other effects.

Climate crisis can have sub significant impact on social life particularly on the vulnerable population and communities. Some of the global social effects of climate crisis include Displacement, migration, health impacts, Economic impacts and social inequality.

Incoherent multiple arguments in a single paragraph

Climate crisis on the <sup>environment</sup> reflects ~~on the~~ to the <sup>envirom</sup> impact of human activities on the natural world, including changing in the atmosphere, ocean land and ecosystem.

Some of the most significant global environment issues include climate change, loss of biodiversity, pollution, resource depletion and over pollution.

Each point should be discussed in a separate paragraph, with proper evidence to support it

Climate crisis is causing melting glaciers. As temperature rise, and glaciers are losing mass and retreating majority water

Sentence structure

79% fresh water in form of ice due to water

One argument per paragraph

Loss agriculture industry disturbs. As Per NASA 11.5% melting glaciers Per decade in Arctic Sea

Sentence structure

As Per NASA Himalian glaciers are the most rapidly melting glaciers in the world.

Climate crisis causes increasing sea level.

As temperature rise, glaciers and ice melt adding more water to the oceans.

No coherence in the paragraph

It is threat to coastal population. Almost 50% population is living in the coastal areas within 100 km. Like

Irrelevant example

Coastal Areas are Chitagang and Katachi.

Due to sea level increase  
climate crisis can lead  
to increase flooding in ?

Several ways. Here are  
some causes of flood  
are increased precipitation,  
Rising sea levels changes  
in weather patterns and  
increased soil situations

Due to sea level  
increase migration can  
be one of the  
consequence of global  
climate crisis. For example  
sea level increase due  
to global warming can  
cause coastal communities  
to be displaced as  
these homes and livelihood  
are threatened by flooding  
and erosion.

No paragraph structure  
no coherence

Climate crisis can  
harm the economy in  
several ways.

Extreme weather effects  
can damage infrastructure  
and property, leading to  
economic losses

Changing in weather  
patterns can damage crops  
and reduce agriculture  
productivity.

Incoherent

Incoherent, where one paragraph starts and ends is unclear

Climate crisis can lead to spread of disease, which can increase health care costs and reduce productivity. Increased demand of coal and changing of the availability of fossil fuels to the availability of f can lead to higher energy costs.

Year 2016 was declared as warmist year

Death ratio increased due to climate crisis from Post 4 year 1200 people died in Karachi; more than 4500 people died in India due to global warming.

Reference?

Climate crisis can affect effect human health. It can cause infection disease, ~~air~~ air pollution, weather born disease, food insecurity and mental health.

repetitive

As per (WHO) world health organization 3.5% Dengue cases are contributed by the climate crisis in world.

Sentence structure should always be formal

Remember this Before  
climate crisis there was  
no Dengue in the  
world. 3% malaria cases  
contributed due to  
climate change.

climate crisis  
can have <sup>affects</sup> significant  
Political effects both  
domestic and international

Here are some key ways  
in which climate

crisis can affect,  
Politics, domestic Politicians  
international cooperation,  
climate refugees and  
National security.

Too many arguments

climate crisis can  
cause for Rising complex  
b/w States, Rising complex  
b/w developed and under  
developed countries, and  
we had have great issue  
with India on water.

Incorrect expression

Sentence structure

climate crisis  
can have significant  
impact on Agriculture, which  
can ~~be~~ ripple effect  
through out the  
food supply chain.

Sentence structure

Here are some  
ways in which climate

Climate crisis can **effect** ~~like~~ like, crop damage, soil erosion, water logging, contamination, disruption, live stocks and rising temperature of earth.

affect

Pakistan is facing climate crisis. Situation is not good for Pakistan. Pakistan is facing flooding, temperature rise and sea level rise.
