

TOPIC = NEGLECT OF ENHANCING INTELLECTUAL ABILITY IN OUR EDUCATION SYSTEM

Outline

- Introduction

Thesis Statement: The current education system does not consist of the required efforts and regulations that enhances the intellectual ability of an individual. It is due to the lack of advancement and less practical knowledge in our courses. It can be enhanced by updating and introducing new methods in education system.

- Crunch Paragraph.

- Causes of neglect of enhancing intellectual abilities in our education system.

- a) Lack of supervisors impact on system.
- b) old school teaching methods believers.
- c) lack of use of technology in classes.
- d) Following the old curriculum for decades.
- e) Not getting enough budget to make advancement ^{courses} available for everyone.
- f) Not enough workshops for teachers for enhancing intellectual ability.

• Effects of neglect of enhancing intellectual ability in our education system.

- a) Low standard education in institutes.
- b) No increase in country's think tankers.
- c) Not able to get jobs from abroad.
- d) Not able to generate innovators for the country.
- e) Not able to compete with other countries development annually.

• Remedies for enhancing intellectual ability.

• Conclusion.

Essay

The current education system in our country is facing a lot of problem due to neglect in enhancing the intellectual ability. Intellectual enhancement of an individual is necessary because it helps them to be more aware of the issues around us and they become future innovator and problem solver of the country. They are always observing and thinking of new possible ways to improve one's society. But unfortunately we as a nation are failing in this area.

because we are not able to provide the efforts, rules and regulation to ensure our future generation's intellectual ability enhancement.

As we know, for decades our students are given the same old curriculum, that is been going since their parents may have started studying. This actually shows that our system does not have the programs for enhancement of individual

There are some problems that have been causing this neglect for a long time and there has been additions of new problems overtime.

One of most prolonged problem is the lack of supervisors impacts on the education system. It is because they have the responsibility to implement new rules and impose new advancements in the system. As some of them are not fulfilling their duty faithfully this is allowing the workers to underperform and not give the new ways to enhance intellectual ability.

Another problem is that some teachers are believers of using old methods of teaching. They do not allow themselves to learn ways which will improve the intellectual ability. This also gives rise to lack of usage of technology in some institutes. As we take a look on the average school and colleges in rural areas they can be seen that technology is not widely introduced in the teaching methods.

Now the above problem; of not using technology in teaching methods is caused by them not having enough budget to ensure the usage of technology continuously. They have to meet ends on the minimum budget they are being given. This also occurs in some of the universities of Pakistan as they also don't have enough budget in the department, especially government universities. Thus, causing the students to remain backwards in time.

Mostly teachers who are still not able to conduct classes in a way which can enhance the individual intellectual ability

is because they are also not giving awareness on how they can improve their conduct. They have not given the annual workshops will guide them, motivate them and ensure the quality of education.

effect

The following have been observed in our education system.

The quality of education is decreasing annually. As they are not new ways in which people conduct their classes or program to ensure enhancements intellectually, so, the education is now the students getting is very low quality.

As we know think tankers are important for a country as they provide new methods of improvement and solve the ongoing issues, so, for that we need individuals who have that kind of thinking ability. But as we do not have that quality of education, to ensure enhancement of an individual intellectually, there will be a decrease in the number of think tankers. Another effect is that our individuals do not have the intellectual ability, this also

becomes a hindrance for them to get a job abroad. As they are not able to get a job abroad so it effects on our foreign direct investment. So not only it causes unemployment internationally but also effects on our economy.

We also see the effect of not being able to generate innovators for the country. As we know, the fields of medicine, technology and engineering requires ability of an individual to be able to critically think about the problems and provide solution or derive new methods for improvement. But since the education system is not being able to ensure enhancement of individual intellectual ability so, we will not be able to grow and develop with these innovators.

Because of the above problem we don't have the capability to compete with other countries economically or growth and development wise. We require individual

ent. which have the ability to help the nation to grow but we fail to provide these individual the required programs to enhance their ability intellectually.

They are ways to improve the conduct of information in different institutes to ensure individual's intellectual ability. Like we should ensure to hire such people as supervisors to make sure the rules and regulations should be followed respectively. The people who are conducting the different courses in different institutes should be certified by the government as they can provide the required methods to ensure intellectual ability improvement.

There should such program or advance courses which not only helps them to get job from abroad but to also be the new innovators and think tank of the country.

The current system is not being able to provide the people the intellectual

ability and it is crucial time for us to maintain the rules and regulation throughout our education system because it is not only effecting the individual but also in some ways effect the country's development and globalization.
