

Mock Test 2023

English Essay

1) Neglect of enhancing intellectual ability in our education system

Outline:

1) Introduction

Thesis statement: The contemporary education system in Pakistan is of inadequate standard. The failure of the education system is ~~main~~ manifested in its ineptitude towards ~~bringing~~ ^{tapping} out the true potential within ~~the~~ ~~individual~~ individuals and enhancing their intellectual ability. This is likely due to the continuous neglect towards the education system and failure to modernise it. However, by placing stern measures, the standards of education sector can be elevated.

2- Crunch Paragraph

3- Education System in Pakistan

4- factors that have substandardised the education system of Pakistan

a) Lack of Priority

b) insufficient allocation of funds

c) ~~the~~ limited quality institutions in Pakistan

d) Outdated teaching methods

e) Unskilled teachers

f) undiversified majors available

5- Impacts on Pakistan

a) unskilled graduates

b) unable to produce renowned scientists

c) fallen behind in research and other

technological fields among the region:

6 - Solutions

- a) Allocation of proper funds.
- b) train teachers
- c) Proliferate quality educational systems.
- d) Provide opportunity to capable minds who lack finance
- e) Updating education curriculum
- f) invite other countries to open universities in Pakistan

7 - Conclusion

"Every body is a genius but if you judge a fish by its ability to climb a tree, it will live its whole life believing that it is stupid" (Albert Einstein). The quote places emphasis on a well structured and up to date educational system that possesses the ability to tap out the true potential of students and elevate their intellectual capacity. The ~~education~~ educational system of Pakistan is a classical example of judging a fish on its ability to climb. There are several factors that have impeded the growth in education system of Pakistan, to name a few, insufficient allocation of funds, outdated teaching methods, lack of quality institutions, unskilled teachers etc. The contemporary education system of Pakistan is of inadequate standard. The failure of the education system is ~~more~~ manifested in its ineptitude in tapping out the true potential that lies within individuals and enhancing their intellectual ability. This is likely due to the continuous neglect towards the education sector and failure to modernise it. However, by placing

stern measurements, the standard of education can be elevated.

The education system has been ignored for far too long; consequently, it has become ineffective to groom and develop individuals. The intellectual ability of the students have remained untapped and as a result Pakistan has failed to produce brains that can compete with ~~interat~~ international counterparts. This has ~~at~~ also effected the ~~rese~~ research ability of Pakistan ~~has~~ as a whole, and Pakistan has ~~fallen behind~~ failed to technologically advance itself.

Pakistan's education system has been in decline. There are many factors that have contributed towards its downfall and brought it to where it stands now. The factors that have caused this range from lack of priority to ~~un~~ unskilled professors. Albeit in ~~decling~~ decline, the education system can still be improved with the help of proper corrective and preventive measures. This is a slow process but once it ~~is~~ is given ~~proper~~ ~~at~~ undivided attention, it can play an imperative role in ensuring ~~pros~~ a prosperous Pakistan.

Since its independence, Pakistan has focused ~~on~~ towards issues that endanger national security and in doing so it has neglected the education sector. One can argue if it was the correct course of action, but considering the security challenges that Pakistan has faced which includes war on terror,

Threat from India and Afghanistan etc, It could be ~~said~~ easily justified. Pakistan has faced many security challenges both internal and external, so while spending huge amount of budget of military might ~~to~~ not help in developing the intellectual capacity of the country it was vital for its survival.

The insufficient allocation of funds towards the education sector is what deteriorated it. The political leaders have spent huge sums of money in revamping the roads and other infrastructural development. The idea behind this is that these developments are visible to the naked eye ~~and~~ and can be the bases on what political campaigns can be fought over. However, the education system could take years before a change is seen and that is why it is often neglected. The ~~World~~ World Bank indicates that Pakistan had only reserved 2.4% of its total budget for education in the fiscal year 2021. This is evident ^{of} the lack of interest the political parties have in improving the education sector of Pakistan.

Pakistan, a country of almost 230 million population has only a ~~hand~~ handful of quality institutions which have adequate research power. This indicates that only a small number of student have the opportunity to get nurtured in these institutions, leaving many capable minds with an option but to go for substandard institutions. Quality ~~etc~~ institutions are what equip young minds with the necessary skills to

achieve greatness. A survey conducted by Imed Bouhvik states that United States ~~has~~ dominates the list of top scientists on earth, accounting for 44% of the world. This is likely because US is one of pioneer states of modern education and has some of the world's renowned institutions. ~~to~~ Having quality institution is essential for increasing intellectual ability of students, It is also vitally important that number of such institutions should also increase to cater the needs of the youth.

Pakistan has failed to equip itself with modern teaching methods and syllabus. Most of the institutions, if not all, are using the same facilities and methods that they have used when initially built. Lack of ~~&~~ modern labs and content ~~is~~ has increased the ~~technological~~ technological illiteracy among the youth. Most of these individuals ~~we~~ have never been taught about the ~~the~~ technological advancements happening around the globe, and they certainly never got the opportunity to use modern technologies. Institutions that lack labs and such technologies can never equip students with the skills to compete with students around the globe.

A survey conducted in 2019 pertaining to Digital literacy states that only 3% of women in ~~the~~ Pakistan could copy or move a file. Such ~~state~~ stats highlight the ~~the~~ dire situation of digital illiteracy in Pakistan shows the need of modern education that provides hands on experience with the latest technology.

Constant neglect and lack of prioritising towards the education sector is why it faces constant decline. Such an incompetent system is producing graduates who may have a degree but are unskilled. The current system has failed to develop skilled graduates; as a result when such individuals apply for jobs, they fail to recognise what the job entails. Furthermore, such students find it extremely difficult to compete with foreign counterparts in industries. These students rarely get an ~~acceptance~~ acceptance from companies situated in developed countries.

According to Radeev Tanoli (2016), most Pakistanis are exploring job hunts in Middle East or Africa, since they rarely find opportunities in developed countries such as UK and USA. The lack of opportunities in developed countries indicates the failure of our education system that has failed to tap into the ~~inter~~ intellectual ability of individual or provide them with the necessary skills that many jobs entail.
