Can Online Education totally replace traditional form of education.

1) Introduction

Thesis Statement

Education has ^{been} sin-qua-non for the development of every ~~secondary~~ era, and it has evolutionalised with time according to the requirements of the people. Online Education is the ~~new~~ modern means of acquiring knowledge. Although it is very useful, it does not have the capability of totally replacing the traditional forms of education entrenched in the roots from centuries.

2) How traditional form of education is an effective way of learning (Thesis) **Main headings should address the keywords from the topic.**

a) Physical supervision of teachers.

b) A feasible class room environment enhances productivity and motivation.

c) Books and other resource material is always there to help students in learning.

d) Traditional form of classrooms enunciate a feeling of connectedness within the student and brings psychological satisfaction.

3) How online education is replacing traditional forms of learning. (antithesis)

The argument is not whether the online education exists or not
The argument is whether it can replace traditional education or not.

a) Presence of online teachers and robots

b) Online class rooms have been designed and formed

c) E-libraries and ebooks are trying to replace physical books.

d) Students can remain connected virtually

4) The roots of education learned traditionally still hold strong (synthesis)

a) Increase in teachers and ~~the~~ development in their specialisation.

b) Universities still expanding and opening new branches.

c) Rapid increases in printing of diverse nature of books.

d) Character building and psychological well being assured through traditional learning.

5) Conclusion.

Online Education totally replace traditional form of education.

The sentence is part of your thesis statement. Write it at the end of intro, together with the thesis statement

Physical

Education has been an-qa-non for the development of every era. Even the process of revelation from Allah (SWT) started with the verse of Surah Alaq, "Read! Read in the name of My Lord." The verse continued emphasizing on the importance of education and imparting of knowledge in the following words: "He who taught man the use of pen. Taught man what he knew not." Education has therefore undergone changes in order to customise and modify itself according to the requirements of the people. Currently, online education is the modern means of acquiring knowledge. It has a plethora of benefits and has revolutionised the traditional system of education but it is not possible for online education to totally take over and replace the traditional form of education. Traditional form of learning is an effective way of learning that has reached its current face by getting evolved for centuries, although online education is a promising way of imparting knowledge, but the roots of traditional learning still hold strong.

You have to show the significance of the topic not just one word from the topic.

End the intro with the Thesis statement

In traditional form of learning, students are supervised by teachers physically. The benefit of being physically evaluated by teachers are numerous.

If students make mistakes, they can be evaluated while and then. Moreover, teachers are there to witness the body language and facial expressions of the students.

These judgements of the teachers can only be made through one to one interaction between students and teachers. This can ensure effective parting of knowledge

as teachers can assess which child needs ^{more} attention.

They can also assess if they have successfully communicated their stance to the students. They can even judge

if they need to adopt a new strategy in order to communicate with their students more effectively. This

makes traditional form of learning more significant. ~~than~~ online education.

A feasible class room environment enhances productivity and motivation of the students. In traditional way of learning, the discipline of class room plays a vital role in imparting knowledge effectively. When students are sitting in a proper place with appropriate clothes and on appropriate furniture, moreover they are surrounded with pupils of their own age or at least those who are

ing to grasp same ² concepts, their level of motivation increases by leaps and bounds. Not only for that time being, they feel encouraged to work on their tasks later on which increases their productivity. A recent survey of the US school indicated that 40% pupils were able to solve the same problem in school what they were unable to do at home. It further concluded that the reason was the effective and productive environment learning of physical classrooms is imparting knowledge and enhancing problem solving skills.

In traditional form of learning, books and other forms of ~~learning~~ resource material is always present to help students learn and grasp concepts in an effective manner. This knowledge is age specific, topic specific and mostly according to the required syllabus of different universities, schools and colleges. Students do not have ^{the} ~~the~~ through to skim through vast pools of knowledge in order to find the required appropriate education they were in search of.

Moreover traditional and hard forms of books are a popular choice of learning among students as they can physically underline, write down additional notes and supplementary material. These advantages of traditional learning make it an irreplaceable form of acquiring education.

Traditional classrooms bring about a feeling of connectedness within the student. Students when surrounded with different other students feel good. Even if one is going through a bad day or a bad phase of life, the environment of the class and the positive and productive feeling created in a learning institution would boost their mood and create psychological satisfaction within them which would have been otherwise difficult to create. This environment would not only enhance productivity in the academic aspect of life but also lead to psychological welfare. These objective of traditional classroom is hard to obtain otherwise and hence makes traditional learning an effective rather most effective way of imparting ^{knowledge} and shaping future generations.

Although, traditional education has a plethora of benefits yet online education is trying to replace the old method of learning. Many scientists and future predicts have predicted that the online education would be successful in totally replacing traditional education

Traditional
imparting knowledge
of online teachers.
are

② Traditional teachers have been effective in imparting knowledge but online education offers presence of online teachers. They are usually referred to as e-teachers. The benefits of these e-teachers are multiple. E teachers can be accessed anywhere, they can be accessed anytime be it day or night. Moreover, these e-teachers know no geographical boundaries. One can easily access a teacher from the United States when sitting in South Africa.

Moreover, e teachers can be accessed in the environment of their dwellings, one doesn't have to go somewhere.

Not only e-teachers, there are ^{also} robots who can teach the same concept again and again without getting tired.

Not only e-teachers, but there are e-classrooms such as google meet. The technology was new and it might not have become that popular but owing to COVID-19, when people were locked in their houses because of the deadly pandemic, these online classrooms acted as a saviour and effectively imparted knowledge to students. Along with google meet, zoom

meeting were also used to impart knowledge to every level of students. Many ~~online~~ universities, even ~~the~~ ^{the} IIT leagues, Oxford and Cambridge were offering online courses through these online classrooms to students sitting anywhere in the world.

Along with E teachers and ^{online} classrooms, the concept of e books and e libraries has also been introduced by online education. Students do not need to buy books physically. They can access books via internet and can pay via internet banking online as well. Via this, it will save them the hassle of going to get the book, moreover they would be able to read a book which might not be ~~present~~ available in their city or maybe their country.

A recent survey reveals how students from Pakistan can access e-libraries of prestigious universities abroad including Manchester University, Jacob University Germany. This imparts more diverse knowledge in students.

Online education can help students remain connected virtually. They do not need to go to school, or education institutions in order to be together. They can be connected ~~even~~ if one student is taking class from Switzerland and the other is taking class from

ujranwala. Online education and connection can ensure
reunion of students without borders and can further
strengthen bonds and ties among classmates and
friends.

Although ~~books~~ ~~offer~~ online education offers
a plethora of benefits yet still the reigns of
traditional learning are held tight and seem not
to get loose to be replaced ^{totally} by online learning.

There has been an exponential increase in teachers
and also people who are acquiring degree and expertise
in order to join the teaching field. Had teaching (
traditional learning) be getting replaced to ~~online~~ ^{structure}
robots and e teachers, these people would have
opted for some other ~~fields~~ fields of knowledge for their
earning. Moreover, these teachers prefer to teach
physically, face to face rather than hosting online meetings.

Although many universities have developed their
online learning programs including Harvard
and MIT, this does not mean that their physical
learning growth has reached to a standstill: all
universities are expanding their physical campuses

and classrooms. Not only international universities but also local educational institutions are doing the same. This signifies that traditional learning still remains popular ~~and~~ significant. It would be difficult for it to be replaced totally by any other form of innovative learning.

There has been a rapid increase in book printing. ~~and~~ Although students can access notes and books from online sites and e-libraries, but sometimes the information is so vast ~~that~~ they deviate from their path in search of the rightful knowledge. Moreover, many students find it more time consuming to access information from the internet and hence prefer physical to the print books.

Character building and psychological well being is only possible through traditional learning. When one is physically present, body language, facial expressions and gestures of hands ~~can~~ be interpreted by teachers and fellows. They can judge in a jiffy if one is going through a problem or not. Teachers and students can help ~~to~~ those going through tough times to come out more effectively in

Additional Learning of students

through online, e-books

doing
learning

⑤

Additional learning classrooms. This can ensure positive mind set of students.

Although online education has many benefits such as E books, e-books, online classrooms and ensures feeling of connectivity among the students but it cannot supersede the benefits of traditional learning that ensure strict checks on students by one to one interaction and can play an effective role in psychological development and character building of a student. → Online education can effectively work side by side with traditional mode of education but it is impossible for it to completely replace the traditional method of learning.
