Digitalisation of judicial system
will surely provide justice to
Pakistan's public.

Outline:-

1) Introduction:-

Thesis statement:-

Digitalisation of judicial system will surely provide justice to Pakistan's public. This is because, the judicial system is overburdened with the backlog of cases and there are many constraints like outdated methods, lack of technology which make the dispensation of justice to Pakistan's public an arduous task.

(Total words: 46)

2) Why digitalisation will

Teacher Feedback

Surely provide justice to Pakistan's public?

3) Digitalisation will surely dispense justice to Pakistan's public (Thesis)

- a) Will make easy for the authorities to provide justice.
- b) Will increase the speed of the cases.
- c) Will be advantageous for the judicial system to provide justice at one click.
- d) Will involve no long procedure for the trial of the cases.
- e) Will alleviate the workload on judicial system.

4) Digitalisation will not surely provide justice to Pakistan's public. (Anti-thesis)

- a) Will not make easy to provide justice, because people have no resources.
- b) Will not increase the ^{boost}

speed of the cases, because of the disruption of the internet.

c) Will not be advantageous for the judicial system, because the dispensation relies only on intentions.

d) Will involve long procedure for the trial of the cases, because people have no access to smart devices.

e) Will not allocate the work-load but contribute to many other loads like health loss.

5) Digitalization will surely provide justice despite the constraints. (Synthesis)

a) It will make easy to dispense justice despite the fact that people have lack of resources.

b) Will increase the speed of the cases, although (far-flung areas have no) ^{there is}

ESSAY

Digitalisation makes the longer and complicated tasks easier and convenient.

There is an adage that "embrace change, endure chaos, and emerge transformed." This means that by switching to digitalisation, we humans can avoid chaos in the society.

Similarly, the use of technology / digitalisation can foster the dispensation of justice to Pakistan's public, because it makes the dispensation of justice easier. Digitalisation of justice system will surely provide justice to Pakistan's public. Because, the judicial system is overbordered with the backlog of cases, and there are many constraints like outdated and archaic methods, lack of technology ^{etc} (etc) which make the dispensation of justice to Pakistan's public an arduous task. Digitalisation will surely provide justice to Pakistan's public because it will

make easy for the authorities to provide justice, will increase the speed of the cases, will be advantageous for the judicial system to provide justice at one click, will involve no long procedure for the trial of the cases, and will alleviate the workload on judicial system. But due to some factors, it may fail because although it will (not) make easy to provide justice, people have no resources due to disruption of the internet, dispensation of justice depends on intentions, public have no access to smart devices and may contribute to many other loads like health loss. ^{But} Digitalisation will surely provide justice because despite lack of resources, it will make easy to dispense justice, will expedite the speed of cases, will be advantageous for judicial system, will involve no long procedure for the trial of cases, and will reduce the workload.

Digitalization of judicial system will surely provide justice to Pakistan's public due to many reasons. It will make the trial of the cases expedite. In many under-developed countries like Pakistan, the average pending time per case can span for a year or more without digitalization of the judicial system (**How Digital Justice is Transforming the Justice System, microsoft.com, Oct. 2016**). Digitalization of the judicial system will reduce the average long procedure for the trial of the cases. **According to Mohammed et al. (2019)**, the introduction of e-filing provides several advantages, such as tremendous increase in the speed of applications and transmission of court documents for faster disposal of cases. (**Digitalization of Court Processes in African Regional and —, scholarworks.waldenu.edu, 2021**). It will reduce the workload on the institutions which is obstructing the dispensation of justice to

Pakistan's public. More than 2 million cases are pending in the Supreme Court, Federal shariat Court, high courts and the district judiciary. (An Evaluation of pending cases in the judiciary of Pakistan; Figured Figures --, pssr.org-pk,)
(Total words: 134)

Digitalisation of the judicial system will surely dispense justice. Because it will make easy for the judicial system to provide justice. In Pakistan, there are many impediments like the backlog of cases ^{workload etc} which stymie the process of dispensation of justice, and these bottlenecks make the pursuit of justice for ^{Pakistan's} public an impossible and herculean task. For example, the backlog of ^{Pending} cases in ^{Supreme Court of Pakistan} (Punjab province) of Pakistan only amounted to a gigantic figure of 45,508 cases and this impedes the provision of justice to Pakistan's public.

this way, the digitalisation of judicial system will surely provide justice to Pakistan.

(Total words: 101)

Just like making easier the dispensation of justice, it will surely ^{provide} (dispensation) (of) justice to Pakistan's public. This is because, it will increase the speed of the cases. Low speed of hearing of cases is the primary reason for the delay of justice in Pakistan's courts of all tiers, and it fades the hope of justice among Pakistan's public. For example, there are more than 2 million pending cases in all courts including Supreme Court, Federal Shariat Court, high courts and the district judiciary, and due to this people lose their confidence in the judicial system of Pakistan to dispense the justice. In this way, the digitalization of judicial justice system will surely provide justice to Pakistan's public as it dispose

off cases at a rapid pace.

(Total words: 129)

Just like increasing/boosting the speed of the cases, digitalisation of judicial system will surely dispense justice to Pakistan's public. This is because, digitalization will be advantageous for the judicial system to provide justice at one click. The justice dispensers in courts find it difficult to dispose off cases due to the lengthy register of the cases and digitalization will make it convenient for them to dispense justice to Pakistan's public because for delivering justice, they do not have the need to go through the prolonged register of the cases. For instance, there are many countries including US, France and UK etc, where the digitalization of the judicial system aided in the dispensation of justice and made it advantageous for the judicial system to provide justice at one click. In this way, digitalisation will surely provide justice
