There are two powers in the world; one is the sword and the other is the pen. There is a great competition and rivalry between the two. There is a third power stranger than both, that of the women in This is thereposition of women in the eyes founding fatebetteinde-Azam Muhammad All Jinnah; that is, stronger than the two most powerfult weapons pen and sword. Their streng. can is allows them to participate and take responsibility of professional life on their shoulder Women, nowadays, have become very active in pursuing their careers in the same professions as men do. However, they still remain on the losing aside in professional life. The misperception of their abilities by the conservative mindsets does not let them flourish in professional life. They have always faced the problem of Lack of representation in every sector. Additionally, they are stereotyped as bad leaders and this prejudice is irrespective of the talents and abilities they have. Moreover, cultural norms and patriarchial mindselts limit their role in professional life, giving them less opportunities for professional training. Lastly, if women are allowed to pursue their carrer, it ends with their marriage. To continue career after marriage Puts extra burden on them as their domestic responsibilities are not shared.

Spanned walk CamScanner

Don't start the paragraph with a fact It will take 131 years for the world to attain full gender parity between men and women according to the Latest Global Gender Gop Index Report (2023). While reviewing the report on progress of Sustainable Development goals (SDGs), the world realised has been successfulle in providing country equal offortunities to male and members of their society. Only one country i.e. Iceland has achieved 90% of the How How do you come torget. There fore, women remain on losing to this conclusion from above? side of professional life Haspited all the modernization. Women participation in professional life is perceived as a previlege and not as their basic right. This is evident the unequal treatment they receive in every sector and that eliminating gender discrimination Very hopeless 131 years for from today. Women lag behind men as they always face the challenge of under-represent ation. They are always neglected even while policies for themselves. Their minimal framing political representation is one such case. The Global Gender Gap Report (2023) indicates that widest gender gap exists in political empowerment In case of Pakistan, there is 15.2% Parity between men and women in political representation. This under-representation is not only in politics, but other sectors also Women, who comprise half of the world

population, do not even get half of the representation. Therefore, the lower opportuwomen representation shows that they are on the losing side professional ufe. Another factor that women lag behind mentione sterotyped as bad leaders. Due to their biological characteristics and societal roles, perceived as less resilient and are compet hence, not suitable leadership roles. They are only perceived good in their domestic roles. Women workplace report by shory! Sandberg's Mckinsey and co reported and promoted to for every 100 men that manager role in 2022, only 87 women same boost, up from received the figures dearly indicate that in 2021. These as leaders women them remain on the at all, making losing side of professional cultural norms also limit women Professions. They are different Participation in their own choice restricted to pursue the career of perceised/9 axe Women roles only. May a Angelow in her article is by Nishtha Shireen "How important for us to recognise and TS Maya Angelou celebrate heroes and she-roes (2017) OUY died in 2014 illustrated the fact that women

good considered good nurturers. She said, that "No matter how much a society evolves, it perceives its females as nurturers, custodians and keepers." So, the professions that are considered suitable for women are that of doctor, teacher, nurse, etc. This clearly shows that women are still remain on 446 losing side in their professional lives. There is another fact that illustrated that women are far behind their male counterparts in professional life and that is the training provided to them. They are not trained for professional life. Training of women is more focused on skill impartment and those skills are usually required in domestic life. Labour Force Survey 2020 - 2021 showed that a women education, mainly tocuses on skill provision, for example, taildring, cooking, benty parlown training, etc. They are not provided with enterpreneurship counseling or any skill \$ which would allow them to enter in professional life. Hence, women are not trained for conseers and professional life and that is why they are on the Losing side in this sector. Another, factor hindering women's professional growth is marriage. Women ence either themselves quit or are forced to end their career after marriage. They

have higher enrollments in educationals institutes but less involvedment in professional life. This argument is seconded by the Pakistan

This argument (PMC) which reports that in Pakistan, women outnumber men in medical colleges with 80 percent envolument, yet they fail to practice medicine following graduation 50% percent of graduated & women doctor deither do not practice or leave employment in a short period. The only reason behind it is the domestic burden offer marriage. Hence, accepted there is no doubt that women are on the losing side of professional life. However, some people argue that was the times are changing, women are getting equally involved in professional lives. women participation is highly encouraged. form of goota. For instance, in the of Pakistan, 60 seats are Parliament reserved for women. Moreover, they can also participate on the general seats. This is the privilege women have in order to ensure that they represent the women population in the country . Similarly, in every institute, women are por being provided this opportunity to encourage their representation. This is not just restricted to one or two nations. O

people are have the rising ector and theres participation Another argument that supports professional life. women participation is that women leadership qualities are definitely selected andor such posts the stereotype of women being bad leaders no more exists. Researche have shown that women are more compet and effective as leaders. " women are slowly rising in political leadership and in corporate and educational leadership", said profession of psychology, Alice Eagly, at Northwestern University & presence on peses Therefore, people have realised that women leaders can enhance productivi increase collaboration and inspire organizational dedication. Hence, their participation in professional life appreciated. It is also argued that the cultural factors that used to restrict women and to domeste changing over time. Ifferent cultures have accepted women professionals. They now seen in every profession. For example, women were lar lier, seen is only

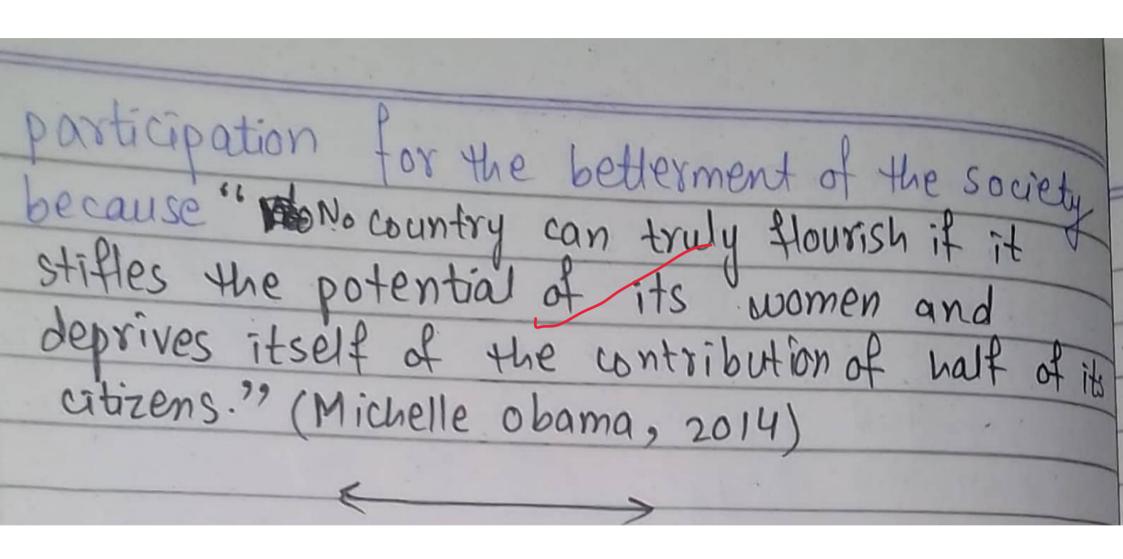

teachers, doctors and nurses, but now teachers, bumber of women working as there are not only and many other fields. They are not only participating in their respective fields but also playing dominating roles. Thus, also playing no means, remain on the losing side of professional life. They are near to equal position as men. do not lack training for professional life. They are being profided with institutes for training and education. In some countries, there are separate institutes for women education. By There are many flave Islamic University in tol and many other institutes that exclusively provide as education to women to train them as good professionals. So the argument saying that women tack the right and opportunity for proper training is not valid and women enjoy equal opportunities as men do. Another argument as is that the career of women do not end with morriage. They are provided with facilities in this regard, especially the working mothers. Many institutes have aspeading to each managements provided special facilities to them.

For example, the establishment of moreon nurseries or the child care centerse or women with the opportunity to work freely while their child is taken care of by the hired persons. These are centers are now everywhere and women can now continue their career after marriage too. There has been some rise in the women participation but women are still on the losing side of professional life. Although they have fixed quotas to ensure their representation but the is it also does not solve their problem. Fixed quotes provide them representation but only to a minial level. For example, in case of Pakistan, there are only 20-5%, women in National Assembly and 18-3%, in the Senate as per Women Legislator's Report 2017-18. A population with about 48%, women having only about 20% representation 1s not enough. They are not involved in decision-making process and are not consulted for making policies. There fore, women lag for behind in men in professional life. women are more talented and reports have proved that but still they are prejudiced for bas being bas

readers. The stexeotype against them is still very comon. Only a few cases are evident where women leaders are seen. This is represented in the research done by Amy Novetney (23rd March, 2023), which stated that despite all the talents and qualities, only 10% of the companies are led by women. This percentage of a larger community is very less. Similarly, Labour Force Survey (2020-21) illustrated that only of the employers in Palastan are women. Thus, women are not parual to men and are on the losing side of professional life. Although, warmen awakeness has changed the mindset of people, encouraging women participation but there are still many patriaxchial minds ets that put restrictions of on women . They do not like women to be superior than men. The idea of women in as coreer oriented, is not appealing to such people. "while they are allowed to study and work on paper, men have strong influence in their lives, and so, whenever a woman wants to work, she is often pressured to stay at home and be a good wife and mother."
This truly illustrates the position of women in today's modern world as the research was conducted in March, 2023

under the title; How Patriarchal mindset prevents denied with the right is professional life and they lie on the lagging side in this domain. Women are provided with education and training but they do get bravequality in this matter as men women education is more focused to impayt skills for domestic life rather than professional life To expect women to a work effectively in any profession, they have to be treated the and trained the same way as men. Plato rightly mentions in his book, " I The Republic? that "If women are expected to do the same work as men, we must teach them the same things." This discrimination between women can work equally. Therefore, women are definitely on the losing side of professional life. Despite the fact that women are, sometimes, allowed to work after marriage, the biggest problem that make them quit their ate job is the double burden that is laid on them. By doing job, they share the Anarvial burden but thieir domestic burden is not shared at all. A research by Rao in 2018 also agreed that women, in order to have financial benefits or for the purpose of self-actualization, do jobs but they have

to shoulder a double burden from their professional and domestic work, either paid or unpaid. This thinders their performance in both, domestic and professional life, forcing them to guit professional life. Hence, women remain on the lagging side of professional life. In a nutshell, raised awareness and education has helped to empower women to some extent but it the pace of this progress is too slow. Women are proved to be more competedt as leaders but are prejudiced because of their biological traits and societal roles. They are also faced with a numbers of challenges because they do not have enough representation to voice their issues. Moreover, the patriarchal elements of our cultures restrict women to their conventional roles. Inspite of all the awareness campaigns, women are still focing traditional cultural constraints. They are also not trained well for professional lives. Their education revolves around the idea of making them skillful in domestic tite. Women who manage to continue their career, especially after marriage, are laid with double edu burden. that is, domestic as well as professional. Women are not provided with equal opportunit as men and hence they are on the laggin of professional life. However, it important to encourage their equal
