

You are not a tree. Move ahead.

One should always be progressive and contemporise oneself by avoiding stagnant behaviour in all the aspects of practical life. Through advancement and consistent learning and struggle, one enhances ones capabilities and skills, mustering up experiences of life.

On the contrary, the state of dormancy leads to destruction of individuals and societies. It is also evident from the stagnation of water in a channel. Once it stops movement and flow, it becomes spoiled, smelling bad and being full of germs. In the same manner, individuals, societies and states turn out to be inefficient, unproductive and toxic. Hence

continuous learning, and innovation are called for people and societies to grow. There are a few factors substantiating the fact that innovation and consistent efforts can avoid the stagnation of individuals and nations. To begin with, one should keep on learning new concepts and skills

For personal growth and reinterpretation of undiscussed religious teachings to make them relevant in contemporary era is also inevitable. Moreover, individuals should seek employment at global level instead of the traditional approaches and one should perform consistent efforts to achieve ones dream even in the face of difficulties. Additionally, at social level, empowerment of women by deconstructing the bizarre social norms and values is called for to bring prosperity in the society and education system should be revived to contemporize it by bringing rigorous reforms. Regionally, organizations should avoid stagnation and bring about concrete measures for climate justice and resolution of unresolved disputes. At international theatre, political leadership should encourage a dialogue process to curb political dissent and growing economies need to challenge the menace of unipolarity by creating a multipolar world. In this way, individuals, societies and states flourish and transform their fates.

Human beings enjoy the superiority over rest of the creatures on the earth because they possess reason. On account of this distinguishing trait, mankind employs his intellect and thrives in his life. In fact, humans have "will power" to determine their fate through the rigorous use of mind. In fact, man is the only creature which lives in past, present and future, unlike animals which merely live in the moment. Owing to such extraordinary potential, mankind can enhance their quality of lives, availing available opportunities in surroundings.

First and foremost, one should keep on learning new skills and knowledge to grow intellectually. As learning is an unending phenomenon, therefore, people must continue learning new things and ideas. Basically, the ability of mankind to learn continuously assists him dealing new problems and events in practical lives.

When a person quits learning new concepts, he lags behind in the advancing world. It is, therefore, said that the illiterate of 21st Century is not the one who cannot read or write but the one who cannot learn, unlearn and then re-learn new ideas. Hence, being a potential creature, humans should always keep learning and adding into their knowledge to be up-to-date.

In the same manner, re-interpretation of religious teachings is also imperative to make them relevant in the current time. In order to make a religion pertinent in a particular point of time, its teachings should be re-interpreted, considering the requirement of the time. The inability of clergy to perform this necessary task leads to clash of religion and modern schools of thoughts. To avoid this anomaly, Islam allows Ijtihad and make Quranic verses relevant in the changing world. Therefore, the re-interpretation of religious teachings is necessary even in this era.

Moreover, individuals, now, should seek employment opportunities at global level in lieu of domestic domain. In fact, online firms offer huge variety of job opportunities to skilled people and it can assist unemployed masses. In developing world, low employment rate is quite common and youth face economic hurdles, even after being educated. Therefore, to resolve this issue, job seekers should adopt a non-traditional approach of getting employed i.e. distant jobs through internet. For instance, free lancing is one of the types of online jobs whereby youth earns their livelihood. Hence, people should seek employment at global level rather than domestic domain.

Similarly, at social level, empowerment of women through deconstruction of social norms is the need of the hour. In uncivilized societies, women are still subjected to inequalities and discrimination.

As a matter of fact, this attitude prevails since long and hampers women out there. Being a rational creature, man should get out of these prejudices and challenge the dogmas and values set by patriarchal society. In this regard, post-modernists argue that pre-existing beliefs, norms and cultural values need to be revised as there is no objective law or reality in human society. Hence, man should come out his cruelty to liberate women in the society.

Along with that, there is also a need to revive the stagnant education system in the country. The education system lacks modernity and merit, which has made it unproductive and inefficient. Contemporary education system of the state, its quality can be enhanced. In developed world, education has been upgraded and updated but Pakistan fails to achieve this milestone. The education ministry needs to reform the system, based on advanced learning system and

principles. Therefore, education system of the state also demands revival through concrete measures.

Furthermore, a state should necessarily incorporate modern management approaches by getting rid of traditional ones to increase the efficiency of state institutions. The overall performance of a state is the average of the performance of its institutions and they operate on a specific management approach. Naturally, the efficiency of the managerial approach would have impact on the institutional efficiency. To enhance institutional performance, New Public Management is recommended by theorists instead of bureaucratic model. Hence, states must incorporate New Public Management approach to boost up the performance of state institutions.

In addition, the country should also renovate its industries to augment the ailing economy. Currently, the state is in economic ruins and calls for immediate industrial reforms. In fact, the economy of the state is static or even regressive.

on account of lack of sincere efforts from political leadership. Getting out of the dormant behavior, economists and experts must put forward an effective economic policy for the state.

At present, GDP - Debt ratio in Pakistan is 76 percent indicating the appalling state of economy. Hence, the government must bring forth economic reforms to resuscitate the economy of the state.

At international level, unipolarity should be challenged by creating a multipolar world as unipolar world exploits the poor states. Creating diplomatic, economic and political hurdles to global super power may reduce their hegemonic and exploitative behavior. In the absence of global resistance, unipolarity benefits a single state strategically, economically and politically. However, Russia and China have challenged unipolarity of the world and created a multipolar world resisting the exploitation of world hegemon - USA. Therefore, other states must also be proactive to

deter USA in creating a unipolar world threatening the existence of other states.

Likewise, victims of climate change must voice against the destructions caused by the economic activities of developed states. Being voiceless and inactive, developing nations silently bear the brunt of climate change in the form of global warming, floods and heat waves. Basically, this crisis is solely linked with the wealthy states and plaguing the poor states. To acquire climate reparations from the major polluters of atmosphere, developing states need to have negotiations and proposals at international forums. In this regard, the platform of UN can be employed to pressurise the wealthy nations for their industrial ~~emissions~~ emissions of CO₂ at massive levels. Hence, the victims of climate change must show some activity to voice against the disasters created by the economic activities of developed states.

Lastly, developing states should also compete in the international market by exporting their goods instead of being only importers. Usually, developing countries avoid exporting their products at international market due to the fears that they may not compete with foreign goods. In fact, participating in the competitive markets, developing states would necessarily enhance the quality of their goods and thus, they can boost up their economy. Naturally, competition with rivals compels one to strive to achieve excellence in one's works and efforts. Keeping in view this notion, one can argue that developing states can also avail from international markets through their competition.

To conclude, being a rational actor, humans should employ their intellect to transform and develop their socio-economic and educational status. By virtue of reason, they

must exhibit progressive behaviour
 instead of stagnant attitude. They
 need try novel things, learn new
 concepts, perform novel experiences and
 try to see the world with different
 angles. Moreover, humans should also
 incorporate modernity in their lives,
 societies and environment to enhance
 the quality of their lives. In fact they
 should avoid dormancy and quiescent nature
 and strive for achieving their ambitions
 even in the face of hardships. Lastly, humans
 should always be proactive and optimistic
 in life, because Allah Almighty states in
 the Holy Quran:

"Man gets whatever he
 strives for." (Surah Najam, 39)
