

# General Instructions

1. Give numbering to headings
2. Do not write lengthy paragraphs. Write medium sized paragraphs with headings.
3. Do not use table for comparison and contrast questions.
4. Draw figures/diagram/flowchart where needed.
5. Start new question from fresh page.
6. Write unit of the answer in ability section.
7. Explain mathematical steps and the reasoning for better score.

Qno 8. Change colour scheme for references to give them more visibility.

9. Manage time well.

a. Given Data

Raised price = Rs. 80

Percent increase = 20%

12. Give more weightage to expressedly asked part/s of the question.

Required

original price of shirt =  $x = ?$

Solution

We know that:

$$\frac{80-x}{x} \times 100 = 20\%$$

$$\Rightarrow \frac{80-x}{x} = \frac{20}{100}$$

$$80-x = \frac{2x}{105}$$

$$(80-x)5 = x$$

$$400 - 5x = x$$

$$400 = x + 5x$$

$$400 = 6x$$

$$\Rightarrow x = \frac{400}{6} = \frac{200}{3} + \frac{40}{3}$$

$$= 60 + \frac{20}{3}$$

$$= 60 + \frac{13}{3} + \frac{2}{3}$$

$$= 60 + 6 + \frac{1}{3} + \frac{1}{3}$$

$$= 66 + 0.333 + 0.333$$

$$= 66.6667$$

Result

Hence, original price = Rs. 66.6667

≈ Rs. 67.

i.  
c. Scalene Triangle

A triangle which has all three sides of different lengths is called a scalene triangle.

Its all angles are also different from each other.

ii. Equilateral Triangle

A triangle whose all three sides and all three angles are equal is called an equilateral triangle.

$$\frac{180^\circ}{3} = 60^\circ$$

Its all angles (internal) are equal to  $60^\circ$ .

iii. A triangle which is Isosceles and Right at the same time

A triangle whose two sides are equal and the angle between them is  $90^\circ$  is an isosceles and right at the same time.

$$\frac{180^\circ - 90^\circ}{2} = 45^\circ$$

The angles of the other two sides are ~~30~~ <sup>45°</sup> each.

d. Given Data

total slices of pizza = 8

slices with raisin = 3

Required

Probability that shizza will pick a slice with raisin

Solution

Probability that shizza will pick a slice with raisin

$$= \frac{\text{slices with raisin}}{\text{total no. of slices}}$$

$$= \frac{3}{8}$$

Result

Hence, the probability that shizza picks a slice with raisin is  $\frac{3}{8}$ .

Qno. 8

a. Man walks 5 km towards south

Then he turns right (his right) and walks 3 km

Then turns to his left and walks 4 km

Then he goes <sup>back</sup> 10 km straight

Distance from starting point is found by the triangle formed:

$$\begin{array}{r} 10 \\ -4 \\ \hline = 6 \end{array}$$

$$\text{So, } x^2 = 12 + 3^2 = 15$$

$$x = \sqrt{15} \text{ km}$$

Conclusion

So he is  $\sqrt{15}$  km away from the starting in the North-West Direction.

b. To find  
Arithmetic mean of cubes of 1<sup>st</sup> five prime numbers

Solution

$$\text{cube of 1<sup>st</sup> prime number} = 2^3 = 8$$

$$\text{cube of 2<sup>nd</sup> prime number} = 3^3 = 3 \times 3 \times 3$$

$$= 9 \times 3$$

$$= 27$$

$$\text{cube of 3<sup>rd</sup> prime number} = 5^3 = 5 \times 5 \times 5$$

$$= 25 \times 5$$

$$= 125$$

$$\text{cube of 4<sup>th</sup> prime number} = 7^3 = 7 \times 7 \times 7$$

$$= 49 \times 7 = 343$$

$$\text{So, 1 man (construction of 20 km road)} = \frac{40}{50} \text{ days}$$

$$\text{and 70 men (construction of 20 km road)} = \frac{40 \times 70}{50} \text{ days}$$

$$= \frac{40 \times 7}{5} \text{ days}$$

$$= \frac{280}{5} \text{ days}$$

$$= 28 \times \frac{100}{5} \text{ days}$$

$$= 28 \times 2 \text{ days}$$

$$= 56 \text{ days}$$

### Result

So, it will take 56 days for 70 men to complete same length (20 km) of road.

### d. Given Data

Property left = Rs. 1750 000

Debt = Rs. 150 000

### Required-

Money left to be distributed between a son and a daughter of son receives double that of daughter.

Solution

$$\begin{aligned} \text{Money left after paying debt} \\ &= \text{Rs. } 1750000 - \text{Rs. } 150000 \\ &= \text{Rs. } 1600000 \end{aligned}$$

Now, ~~share of son~~ =  $x$

Now, share of daughter =  $x$

share of son =  $2x$

So,

$$2x + x = \text{Rs. } 1600000$$

$$3x = 1600000$$

$$x = \frac{1600000}{3}$$

$$x = \frac{1500000}{3} + \frac{100000}{3}$$

$$x = 500000 + \frac{99999}{3} + \frac{1}{3}$$

$$x = 500000 + 33333 + 0.3333$$

$$x = 533333.333$$

$$\begin{array}{r} 1750000 \\ \underline{150000} \\ 1600000 \end{array}$$

So, the daughter receives  $= x = \text{Rs. } 533.333.333$   
and the son receives  $= 2x = 2 \times 533.333.333$   
 $= \text{Rs. } 1066.666.666$
