Artificial intelligence : its promise and perils.

2/100

Outline

1. Introduction
   a. Development of Artificial intelligence
   b. Evolution of Artificial intelligence
   c. Thesis statement

*Crunch Paragraph*

2. Promises of Artificial Intelligence
   a. Results in decreased human workforce — *Why and how is that positive?*
   b. Better manipulation of data
   c. Generation of Artificial Intelligence powered human replicas — *This does not sound promising*
   d. Gathering efficiency of data relevant to education
   e. Collection of future data with respect to present data — *Redundant, All your arguments are based on data*
   f. Reduction in task fulfillment time
   g. Human behaviour replica for human friendly interaction — *What about health sector advancement? Better and more promising space exploration, Better and enhanced desision making, Environment efforts.*

3. Perils of Artificial Intelligence
   a. Increased Unemployment
   b. Burden on job market
   c. Deepfake videos resulting in harassment

Date:_____

d. Loss in human productivity

Harming of democratic norms

e. Manipulation of data in voting

Low
f. less quality of product ?

g. Autonomous system works for its own
   benefit

4. Solution to perils of Artificial Intelligence

a. Monitoring of data

b. Apply Artificial intelligence to
   specific industries

Lack in-depth exploration of the topic

5. Conclusion
