The United Kingdom is known for having moderate weather all year round. Usually people gets cool, wet winters and warm, wet summers. which attracts a lot of tourism towards this country. But recently, no one ever thought that this country can face extreme weather change as per the BBC news, 34.8°C weather recorded in United Kingdom which is currently named as the hottest day of the year. where as this temperature is quite common in arid countries or now facing the weather above 40°C. Due to the climate change's all over the world has seen the drastic change in the weather events. Not only that, the agrarian countries are now facing torrential rainfalls which result ruin the crop. In the 21st century, Industrialization is known as the backbone of any country's economy is now becoming a threat for the globe. This generation is currently facing ending the consequences of climate change which we've are avoiding in the past. "we are the first generation to feel the effects of climate change and last to do something about it". (Obama).
