

LMS ID: 34885

Name: Sana Khurshid

Mock Exam: 01

Batch: 57

Subject: English Essay.

Topic: Climate Change: Causes & consequences.

Outline:

1- Introduction:

→ Hook: Climate change is a pressing issue of Global world.

→ Importance of addressing climate change.

→ Thesis statement.

2- Causes of climate change:

→ Burning of fossil fuels.

→ Agriculture.

→ Deforestation.

→ Population growth.

→ Industrial process.

→ Transportation.

→ Volcanic eruption (natural cause).

3- Consequences of Climate change:

→ Rise of global temperature.

→ Extreme weather events:

i- Heat wave

ii- Flood.

iii- Droughts

→ Consequences for the ecosystem and biodiversity:

i- Rise in sea level.

ii- Loss of glaciers.

Thesis Statement:

"Climate change primarily cause by human activities such as; burning of fossil fuels, deforestation and it has severe consequences including rise in sea levels, extreme weather events, loss of biodiversity and it is necessitating to immediate the global action to mitigate its effects".

Introduction:

Climate change is the pressing issue of the global world. Climate change refers to the change in the environmental conditions of the earth. It happens due to many internal and external factors. The climate change has become a global issue from the last few decades. The climate change occurs due to the human activities. Humans due to their need and greed has done many activities that not only harm the environment but himself too. Human activities that harm the environment include deforestation, uses of fossil fuels, industrial wastes that pollute the environment. That damage the climate and ecosystem very badly. The weather pattern have change over the time. Scientists have revealed that the earth is in danger

and action must be taken quickly. You might have noticed that the weather is getting weird and more extreme. There are really ^{hot} summers, rise in sea levels and storms. This happens because of the way the people treating the earth such as; cutting down trees, using too much energy and releasing bad things in the air like carbon-dioxide. The far-reaching consequences of climate change demands immediate attention, collective actions and sustainable solutions to mitigate its effects on the lives on earth. and ensure a liveable future for the upcoming generations.
