# climate change: Causes and consequences

## Outline

1. Introduction

2. causes:

2.1 Deforestation:

- (i) More carbon dioxide emission
- (ii) loss of biodiversity
- (iii) Lack of natural resources

2.2 fossil fuel burning:

- (i) Burning of oil
- (ii) Burning of natural gas
- (iii) Burning of coal

2.3 Industrialization:

- (i) usage of chemical substances -
- (ii) Harmful gases emission -
- (iii) large scale production.

2.4 Pollution:

- (i) water pollution
- (ii) wind pollution
- (iii) Environmental pollution

3. Consequences:

3.1 Hazardous environment:

- (i) ozone depletion
- (ii) Emission of green house gases -
- (iii) Harmful air for living being

### 3.2 Health crisis:

- (i) Unhygienic water
- (ii) Unhealthy food
- (iii) Pandemic diseases

### 3.3 Unprecedented floods:

- (i) loss of Agriculture
- (ii) Devastating infrastructure
- (iii) large number of deceased.

### 4. Way forward

- (i) Forestation
- (ii) Use of Natural resources.
- (iii) Healthy and filtered food and water
- (iv) less industrialization

### 5. Conclusion

#### Introduction:

“Our single mission: To protect and hand on the planet to the next generation” — President of France.

Climate change is neither a new issue nor a fully settled one. Developed countries are successfully dealing with it, while developing countries are still struggling with it. Unfortunately, Pakistan

is one of them. Climate change has many causes such as; deforestation, fossil fuels burning, industrialization, pollution and so on. These causes lead to several consequences like, hazardous environment, health crisis, unprecedented floods. Climate change is not a natural issue, but a manmade. This severe issue needs an honest and genuine way forward to tackle as, reforestation, less industrialization, use of natural resources and many more for the prosperity of country and their citizens.
