

# Mock

Brain drain is better than  
Brain in drain.

## Outline.

### I. Introduction.

- 1.1. Hook
- 1.2. General statement
- 1.3. Thesis statement

### II. Main body.

2. Brain drain might be considered better.

- 2.1. Maximise potential
- 2.2. Global knowledge exchange
- 2.3. Economic benefits
- 2.4. Personal fulfillment

Plz enhance length  
of ur writing

3. Brain in drain is worse:

- 3.1. wasted potential
- 3.2. Reduced global competitiveness
- 3.3. Economic stagnation
- 3.4. Loss of motivation

It is too short plz  
elaborate

4. Solution to address both brain  
drain and brain in drain

- 4.1. Talent retention program
- 4.2. Educational reform
- 4.3. Entrepreneurial support
- 4.4. Infrastructure and developmental investment.

### III Conclusion.

Final thoughts.

#### Essay

"Would you rather see a brilliant engineer working as a taxi driver in their home country or leading ground-breaking projects abroad, where their skills are fully utilized and appreciated?"

According to the **World Bank**, Pakistan is one of the top countries affected by brain drain, with thousands of skilled professionals emigrating every ~~year~~ year.

Brain drain is the international flow of human capital where individuals from developing countries move to developed nations seeking better opportunities, leading to an unequal distribution of talent and resources globally.

Brain drain occurs when educated individuals stay in their country but are unable to contribute to society because of a lack of resources, opportunities, or support holding back both personal and national growth. Brain drain might be

Considered better because of maximize potential, global knowledge exchange, economic benefits and personal fulfillments while brain in drain is worse due to wasted potential, reduced global competitiveness, economic stagnation and loss of motivation.

The solutions to address both brain drain and brain in drain are talent retention program, educational reform, entrepreneurial support and the last is infrastructure and development investment.

~~First come with brain drain~~ which is beneficial because it enable individuals to reach their full potential in the environments where their skills and talents are highly valued which is often not the case in their home country. For example, Shahid Khan originally from Pakistan moved to the United State and become one of the most successful businessman there. He owns the Jacksonville jaguars, an NFL team and Flex-N-Gate, a major auto parts company. In Pakistan

he might not have the chance to grow a business on such a large scale. The opportunities, resources and business environment in the U.S helped him achieve this level of success, which likely would not have been possible if ~~he had stayed in Pakistan.~~ When talented people move to countries with advanced technologies and better resources they have more opportunities to succeed. For ~~example~~ instance there might be few funds for research and resources for business in Pakistan. But in places like U.S, U.K and Canada there are more chances to use new technologies and set up business on larger scale. Using their talents fully not only helps these people succeed but also helps share new ideas and knowledge around the world. Therefore, as they excel in supportive environments, they help advance global knowledge and progress, benefiting everyone everywhere.

Secondly Brain Drain contributes to global progress by enabling the exchange of ideas, knowledge and technology across borders. For example, Dr. Abdul Qadeer Khan, a Pakistani scientist contributed significantly to nuclear technology. Although he was initially trained in Pakistan, his later work involved international collaboration and sharing of knowledge. Similarly Dr. Faisal Khan, a Pakistani doctor moved to the UK to further his research in medical technology. His work on new medical devices has been shared with hospitals in Pakistan, improving health-care there. His international work not only advance his career but also helped bring new medical innovations to his home country. So when skilled individuals move to countries with advanced research facilities and innovation hubs, they gain access to a broader range of resources and expertise. This exchange of

Knowledge benefits both the host country and the home country.

Thus exchange of knowledge and ~~ideas~~ ideas not only promotes global innovations but also has economic benefits for the home country.
