

# Topic :- Climate Change : Causes and Consequences

## Thesis Statement :-

This essay will reflect upon the root and oblivious causes of climate change, followed by its forthright and subtle repercussions on individuals, in specific, and on society <sup>and environment</sup> in general.

## 1) Introduction --

- (1.1) Catch Statement
- (1.2) General Statements
- (1.3) Thesis Statement

## 2) CAUSES OF CLIMATE CHANGE

### 2.1) Root Causes of Climate Change.

- (2.0.1) Excessive Usage of Fossil fuels.
- (2.0.1.2) Consumption of Hydro-fluoro carbons (HFCs) as the main determinant of depleting ozone layer
- (2.0.1.3) Non-Renewables ~~services~~: A primary source for energy generation
- (2.0.1.4) Deforestation: ~~An~~ Ultimatum for climate Change

### (2.0.1.5) Reservoirs: A toothless tiger

### 2.2) Oblivious causes of Climate Change.

- 2.2.0.1) A significant rise in commercial Activities
- 2.2.0.2) Energy generation through non-Renewables: A gestational concept.

2.2.3) Many consider climate change as a mere myth: A popular phenomenon.

2.2.4) Urbanisation: A bulging concept

2.2.5) ~~Developing countries fail to prioritize~~  
Failure to prioritize working solutions for climate change: A skill set ~~to~~ be learned by developing economies.

### 3) Consequences of Climate Change

#### 3.01) On Individuals.

3.01.1) Feminization of poverty: A new concept in the aftermath of climate change

3.01.2) Climate Migrations and Water Wives: An offshoot of climate change

3.01.3) Malnutrition and stunted growth in children, especially girls.

3.01.4) Mental health crisis stemming from climate unreliability

3.01.5) Loss of lives and livelihoods: A source of income.

## 3.02) On Society

3.02.01) Emigration and Displacements

3.02.02) Excessive consumption of non-durable goods

3.02.03) Rise in immoral activities: An offshoot of unemployment.

3.02.04) Gender-Based violence and harassment

3.02.05) ~~Educational Development is stunted.~~  
Education sector of a society is hampered.

## 3.03) On Environment

3.03.01) Rise in the Average Temperature

3.03.02) Marine life is deteriorately impacted

3.03.03) National and Regional Infrastructure is lost

3.03.04) A natural occurrence of catastrophes

4) Conclusion

→ Structure well it

# INTRODUCTION

## Climate

The change in ~~global temperature~~ as considered by many, is not sudden but a gradual work of more than 50 years. The <sup>global</sup> average temperature has risen by 5 degree celsius, yet ~~the priorities~~ of developed economies shows a casual neglect rather than a serious concern. ~~Efforts made~~ by ~~developed economies~~ international agreements have managed to mitigate the negative effects of climate change, albeit by a lesser probability.  
— A lot needs to be done for the visible goals to be achieved in this area of concern.

This essay will reflect upon the root causes and obvious causes of climate changes followed by its farthright and subtle repercussions on individuals, in specific and society and environment in general.
