- C- Lack of access to educational institutions

IV- Some suggested measures for ensuring the best educational outcomes in under-developed countries:

A. Encourage economic support

B. Acquisition of accountability

C. Encourage teacher support and training programmes.

V- Conclusion.

An oldman with his four sons went to the forest of their town. Their father told each son to break the bundle of sticks which were tied together by a rope. Despite of all efforts, no one could succeed in achieving the goal. Upon the direction of their father, all the sons tried to break the sticks and ~~then~~^{then} they had achieved the goal. It The purpose was not only to elaborate the meaning of unity but also to comprehend the importance of efforts in the right direction. Similarly; when the time, efforts are invested in the knowledge it produces the best outcome. Education is not only a code of conduct but also a serves as a guide to man's prosperity. The investment of time, resources, efforts and dedication in the knowledge is served as the ladder towards the prosperity, development and growth of any nation around the globe. An investment in knowledge in the right direction guarantee the best results in form of efficiency and development by alleviating illiteracy rates, ensuring self-reliancy, creating job opportunities , shaping educated society, among others. It not only highlights the poverty alleviation strategies but also encourages ease of business. Moreover, accountability ~~at~~^{the} and shift in attitudes and behaviors of politicians are also among its best outcomes. It also highlights the environmental hazards. Irrespective of best outcomes, unequal distribution of resources, non-implementation on policies and lack of access of educational institutions hinders the whole process. However, certain measures like encourage economic support , acquisition of ~~accountability~~ and training and support programmes for teachers improve the effectiveness of performance in under-developed countries. In fact, ^{an} investment in knowledge ensures best outcomes in multiple areas of

life, although some factors have contributed in less-effectiveness of whole process in under-developed countries, which require certain measures.

To start with, investment of time and efforts by the governing educational institution towards Knowledge helps to reduce the illiteracy rate among individuals.

Knowledge which is encapsulated with civic-mindedness along with sense of self-discipline and critical thinking fosters the love for knowledge among individuals. It creates a setting stage for the literacy development among the learners. Therefore, the nations with high literacy rate often exhibit the pre-school practices for children (ages 3-6).

For example, as stated in "Critical Window for Literacy", American countries, like USA (United States of America) is best known for their time investments in preschool education, even as little as 2-3 hours per day over two years, that boost literacy readiness at the primary school level. Likewise, all those nations which have high literacy rate or low illiteracy rate have bright future due to their investment of time in knowledge. Hence, low illiteracy rate symbolize the best knowledge practices.

In addition to, an investment of efforts and resources in knowledge ensures self-reliancy among individuals. Knowledge and education which is accompanied by technological expertise boosts the self-reliancy among individuals. The level of confidence encourages the students to achieve their desired goals in a more better way.

The access to E-learning creates an environment of equity for students. Therefore, nations with digital teaching apps produces ^{newly} qualified and confident students. For example, Indian app Byjus helps the learners to learn their desired topic ~~in~~ regardless of any time bound hurdles. Likewise,

all those nations which have self-reliant students are portraying their good image at multiple forums. Hence, investment in knowledge results in self-reliant learners.
