Title: The impact of corruption on society.

Reci:

The start of corruption may not seem harmless but these actions result in normalization of corruption. It hampers the fairness in society when a public official favours someone. These small compromises eventually lead to systematic corruption. In academics, when a student cheat to get high marks in merit, it compromises the efficiency of post where he is applying. When people using shortcuts start succeeding, it creates distrust among sub-follower. Small-scale corruptions make people insensitive to larger crimes which causes bigger issues like social disorder. If every person keeps integrity as well as makes himself self-accountable, then fairer and more equitable world could be build.
