

"An investment in knowledge pays the best interest"

Outline

① Introduction

1.1 Attention grabber

1.2. Thesis statement: Knowledge is power - holds true in all the era ~~specifically~~ ^{specially} in today's modern era. It is because of knowledge that individuals develop and countries prosper. Knowledge let the countries to create effective policies, technological advancements, highlights new ways of solving people's problems and creates awareness about people's rights. So, knowledge investing in knowledge will do wonders at individual level and collective level too.

② Effective economy via Junction of knowledge bearing actors

2.1. Informed policies

2.2. Exploring new ways of solving problems

③ Knowledge; reason behind technological development.

3.1. AI, machine learning etc

3.2. Research and Development department is a product of knowledge

④ Knowledge produces holistic view of the world

4.1. Philosophers like Tabbar bin Hayan and others

4.2. Scientific theories and research articles. ~~about~~

⑤ Knowledge draws fine line between right and wrong

5.1. Creating morally upright society.

⑥ Educate people about their rights and rest will be done automatically.

6.1. women Suffrage Movement

⑦ Critical Analysis

⑧ Conclusion.

"As Knowledge increase, wonder deepens"
(Charles Morgan)

The world around us ~~has~~ was not same thousands of years ago. Humans have evolved from caves and stone age to industrialization and urbanization. Previously, when there were no inventions made people had primitive ways of life. Even the light which falls on this paper was not created. People used to rub stones to have fire for the purpose of light but today ~~his~~ source the source of light is the smallest invention, which was a big achievement back when Thomas Edison invented it. Even the paper itself was not a thing until China created it. These all phenomena are an outcome of knowledge realization, knowledge exchange and knowledge implementation. This means if a country wants

to do wonder she simply
needs to invest in knowledge.
The coping mechanism of developed
countries is strong because of their
informed policies, exploring new ways
of solving people's problem and
technological advancement.

Hence, knowledge is the most
useful investment that one can do.

When economy is in the hands of educated people then nation keeps on progressing at a sustainable rate. All the great economists such as Adam Smith, Alfred Marshall and others have focused on education. Adam Smith studied social philosophy at the University of Glasgow on scholarship. His ideas about economy have shaped many policies and consequently have benefited many countries in nation building. His idea about market competition is adopted by China and the position of China is well known.

to all! The educated policy makers and economists makes the policies specific to the country's urgent need and saves the nation from disintegration.

World trends and ways of life are changing and so the modern problems will require modern solutions. Increasing population, climate change, water scarcity, energy crisis and all other problems that many countries are facing currently requires modern solutions which is only possible when the policy maker is educated enough to carve out the needed solution way out.

Sweden's government uses 52% of the trash and garbage to make energy to satisfy nation's energy needs. There is another expedition in the Atlantic ocean, where the oceanographers says there are such minerals which can

be used to generate energy.
So, governments and policy
makers when educated ~~then~~
they know how to take such
decisions which will help in
the progress of the nation.

Technological advancement is the best depiction of how knowledge building and knowledge exchange can revolutionize all the sectors of any country. The evolution of Facebook, chat gpt and others shows the level of knowledge build up and usage involved in these. From "Facemash" to "Facebook" the social app has gone through numerous changes. ~~Study~~ New features keep adding on like ~~from~~ initially it was just an app which would allow students to communicate with each other. but later features like Newsfeed and timeline increased the scope of facebook. Then, the contemporary shows us the rise of chat gpt which is a product of generative machine learning. Therefore, ~~the~~ on the basis of knowledge technology is growing day by day.

Knowledge about space, sea, wildlife, societal issues, religion etc, allows individuals to develop theories, articles and research work regarding these topics. Previously philosophers used to think and observe, their intensity of thinking was so high that they even used to question their physical existence. Philosopher like Jabir Ibn Hayan gave the concept of Asabyah which means unity. He explains the rise and fall of nations which is applicable in today's society as well. Asabyah can be applied to the fall of Ottoman Empire as they lacked internal cohesion and unity.

Then, the concept of Allama Iqbal's Khudi (Self ego) which explains the relation between God and mankind.

"Khudi ko kar buland itna ke
har taqdeer say pehly
Khuda bandy say khud pehly
bata teri maza kya hai".

These philosophers have not given theories on concepts on basis of mere thinking but on basis of observation and knowledge.

Similarly, many scientists have given theories which helps to explain the scientific and biological phenomena. Theories like Newton's

3rd law, ~~and~~ Planck's theory and other such theories are all because of knowledge.

How we would know phospholipid looks like of plasma membrane theory or Fluid Mosaic model

would not be given. The structure of cell and DNA is also explained by scientist because of the knowledge that they had. So, knowledge has done wonders to and for the mankind.

Something is moral
or not is judged on the basis
of some standards, these
standards are set by education.
Education guides individuals
behaviour about what is wicked
and good. The Education guides

guides people in all aspects and areas of life. In the political arena, acts like lack of accountability and transparency, nonfulfillment of basic rights of people and such all acts are highlighted as immoral by the books, theories, ~~articles~~ articles, etc. At societal level, crimes, deviance, neighborhood rights nonfulfillment are all termed as immoral by different subjects and theories. In this way and others, education draws a thin line between moral and immoral which keeps people away from immorality and also from nation's destruction.

Depriving people of their rights is the worst thing that a state can do with its people, but even more worst thing is when people are not even educated about their rights and so cannot do anything

to get their rights back. This happens in different cases like if the people are not educated enough, the basic necessities are not available to them like those of rural areas and when women of that place are not educated. If anyone of the above condition is removed, as per the requirement of place, then people will strive to get their rights in place. Back in 18s when ~~women~~ Women suffrage women happened in which women gathered to get their right to vote. The right to vote is the basic citizen right that every citizen ought to have. Struggle of women paid off and the first right to vote was granted to the women of New Zealand. So, when the people become aware of their rights then they will work to get them.

Critically, we can say that knowledge is the basis of everything. Nations and individuals should invest in knowledge if they want to progress in the long run.

To sum it up, investment in knowledge acquisition, knowledge creation and knowledge implementation is the best investment. The rapidly changing environment requires updated and informed policies, technological advancement and modern solutions to modern problems - all is possible by the power of knowledge.
