

Can Science Save Us?

Outline

1- Introduction

a- Hook

b- General Statement (Background)

c- Thesis: Science ~~sa~~ helps human in every aspect including health, education, agriculture etc. It can save lives and can provide ~~require~~ everything to everyone.

2- Main Body

I- Science in Medical Human Health

a- Food

b- Medical

c- Environment

II- Agriculture improvement due to Science

a- Better Economy

b- Food Supply

III- Environmental factors

a- Astronomy

b- Save Atmosphere

c- Save earth resources

3- Thesis

Science is now playing a basic role in the life of a human. It is an essential part in the betterment of human and ~~ea~~ is serving as a key source to save human.

The Essay

"Earth made sciences and science
developing earth"

Jack Emith

From the past few years, humans are facing problems day by day, every morning comes with a new challenge and a new difficulty to overcome. If we take a bird's eye view Pakistan's situation from the last five to ten years, there is not even a single day on which there is a peace everywhere, every. Each person of the present on this globe is facing a lot of different challenges which are very dangerous and need a lot of courage but now they are not possible to solve.

Some of these issues are human diseases, environmental issues (like pollution, over population), poverty.

Nowadays all of these problems have a variety of solutions and all these solutions are provided by science. Science is basically a knowledge gained through observation and experimentations. Science observe and experience different problems and gives solutions.

Let's discuss about the human health. There are many diseases

now discovered and cured due to science like hepatitis, cancer, Aids etc. In 18th century thousands of people died in a city Pakistan everyday due to lack of treatment. Children were died in the age of zero year to 3 year, because they suffer diseases and not had a medical treatment. ~~Now~~ Every year 68% infants died, but now this death rate decreases as science invent new medicines for 99.9% diseases. Now food can be purify and bacteria free with different methods and a better food insures better living. ~~Exer~~ Along with that due to science a lot of environmental problems are solved that caused human deaths. ~~Some~~ One of these problems are is population pollution. As pollution causes diseases like asthma, allergies etc, can leads to death. Pollution is now almost controlled due to different scientific methods.

One of the basic factor in human life is environment and environment ~~was~~ is facing alot of problems as like global warming, natural hazards etc. In 21st century these problems are almost solved and have

precautional measurements. These measurement are discovered by different scientific methods. Science also plays an essential role in agriculture. Fertilizers are made to increase crop production. Pesticides are discovered to prevent food to destroy. A lot of ~~other~~ machines are made to save time and to increase percentage efficiency. Work of labour is transferred to machines and it save time and cost. Umer Jahangir in his article "جہانگیر" in Jhang newspaper tells that a machine called tractor save farmers cost, time and efforts.

Science

People can contact with their loved ones due to scientific inventions. Someone can call anybody in case of emergency situation.

The matter of fact is that without science, people were living the stone age with no facility and due to science inventions and discoveries world is changed. Every problem have a solution, every disease have a treatment. This is all due to the science.
