d. Denial to rights leads human to displacement.

6. Conclusion

All clamour for humanitarian help should convey that human rights are above from any conflicting agent, but they always sacrificed. The stone age time of servants to elite class is still alive in many forms. From a house to the World the basic human rights are badly injured. Right of living to the right of relishing life, all are sacrificed due to several internal and external conflicts.

Allah Almighty made the human and blessed them with some basic rights that are duties to other human to comply with. But that rights are badly injured by religious, ethical, cultural, social issues and problems that make a tolerable situation to unexpected conflict. These issues affect the whole scenario of one's life. To prevent it from expanding and healing the old wounds its necessary to identify the main conflicts which hazardous to human rights.

Every state is dreaming to expand its hold and the most common tool for this purpose is war. Ukraine - Russia War, Israel - Palestine war and historical wars of Pakistani history all are for power and these wars shattered the human right of living.

Religion now becoming the fault line between minorities of a country. A minority is

considered as unwanted progeny by the Majority. But this minority community is human population. Faisalabad incident is recent in our pages. Manipur incident in India was also disturbing.

Hate to any religion is actually the hate to its followers.

State preferences also dishearten the people and denial to their rights. Unequal distribution of resources and irresponsible management make rift in heart of people and they feel neglected. Many social issues are prevailing and these are links to health issues. Mental trauma now become a taboo in our society. But this is the basic human right of health that a discussion and treatment must be done to the people.

Human rights are the first casualty in any conflict because human is the direct recipient of any conflict. Any social, societal, political, health, educational, livelihood issues all directly affect the human life and his basic right of living.

Many underdeveloped countries are not able to provide the basic necessities to its populace. Poor approach of rights towards people is

for many human rights foundations also. Many people of Pakistan are living under the line of poverty. Unemployment squeezes the people and migration become helpful source for jobs but all soon vanished.

As people are more powerful in some areas and they want to suppress the other people. This violates the rights of suppressed people.

Basic constitutional rights of populace i.e health, infrastructure, education, necessities of life all violated and no one is raising voice against that.

Human is the centre of universe and its rights are indispensable. These rights are duties of some people who are actually responsible for conflicts. These issues must be sorted out and rights and privileges provided to the people who have right to avail that.
