There is a difference in the life of a human and an animal. Human is created with dignified soul including with consciousness, contrary to it the animal lack these especially the conscious. This conscious is the reflection of soul from the part of unconscious mind with a creative drive toward the conscious. As much the soul is remain pure the drives from the unconscious will be more creative, unovative and dignified. As it is evident from the history that creativity is the expression of human soul (the unconscious part of the human mind) reflected by various scientists, Astronomers and philosophess in their lives in the form of creative inventions. Some claimed about the evolution of species, the invention of bulb, Aeroplane and space exploration, while the other written their nominal fictional to enrich the human creativity. Other are working on the further innovation and transforming to world to digitalized. In short, all of these inventions are the reflection of human soul in one way or another in the form of creativity.

Once the companion of prophet Mohammad (PBUH) asked that what is soul? Allah (SWT) revealed in quran that "أرواحنا مطهرة" soul is the command of Allah. From that onward no one exactly knows about the exact essence of the soul. But the modern philosophers, mystics and psychologists are associating it with the human unconscious. Sigmund Freud said that, all the creative drives in the human brains come from the unconscious toward conscious. Some with excessive force the other with passive force. As much the brain is practiced with the grandeur of thought as much the personality will be with more creativity. This creativity is expressed in the form of materialistic things in the shape of various inventions. Moreover, Longinus in his book "On the Sublime" expressed his view about the human soul and his creativity.

According to Longinus that a personality is the reflection of grandeur of thought. A sublime soul with creative and grandeur of thought can produce a dignified

literary piece of writing. They think in a pure way and construct their views, opinions and manifestations about the various issues in their contemporary time. As Socrates analyzed his own time direct democracy and bismarck it. His disciples Plato and Aristotle's further enriched the ideas of their teacher and evolved the direct democracy into a furnish form of governance. Moreover, John Locke, Rousseau and Thomas Hobbes further explored the political system and provided modern day democracy to the world. If all of these philosophers did not utilized their creativity the world will remain stagnated.

Paulo coheleo is one of the prominent writers of the 21st century, who has written his famous book "The Alchemist". In which he has expressed his creativity of his soul in the form of Santiago character. Who saw a dream that, there is a treasure in the Egyptian pyramid. Who started his journey from

from Spain toward Egypt. which is comprised of hundreds miles including with savage deserts. He reached to his destination after various hardships in the way. where he met with two persons during the digging for the treasures. who said him that, we also had seen the same dream that there is a treasure in Spain from where the Saintiago came from. He returned to his place and got the treasures from where he started his journey. This fictional story reflects the soul of the author in a creative way which have transformed the abundance of lives into prosperity. Moreover, Charles Darwin also produced his master literary piece "the origin of species".

He encoded his grandeur of thought in his book "the origin of species. which was actually the expression of his soul. He claimed that, the human race is evolved from the race of chimpanzees. In the beginning human was resembled with chimpanzees. In their bodies were hair, big ear with big nose and

α

nostrils. The hands were their front legs with smaller size from the legs. As the time passed chimpanzees evolved into human. Their hair from the bodies removed front legs converted into hands and become able to communicate through the use of proper language. The concept of "Survival of the fittest" abolished by the modern innovations in the various civilizations. This prediction of Charles Darwin was his own creative expression of his soul either wrong or right. Not only Charles Darwin but also Thomas Edison had invented the bulb through his creative expression of his soul.

Thomas Edison utilized his creative capability as the expression of his soul and invented the bulb after 1000 failed attempt in the formation. He did not see any bulb before in the human history. From the drives of his unconscious toward conscious received an innovative idea about the formation of an object that gives light

light to the world in the future ahead. He tried to implement and transformed his thought into a practical object. He attempted 999 times but failed regularly one after another. At the end he became successful to make his thought practical and innovated modern day bulb which was further polished and different size and shapes are innovated.

In addition to Thomas Edison, Neil Armstrong also expressed his soul in the creativity of space exploration.

Neil Armstrong, was the first person who successfully landed into the moon in 1966. Before him no one can imagine to travel in the space. He not only travelled but also successfully landed into the moon where he observed the space, land of the moon and atmosphere of the moon. He had imagined creatively to travel and go into the moon. Finally, he made it possible and created ~~as~~ a way for the future astronomers to explore the space beyond from the moon.

Similarly, Savante Arrhenius creatively expressed his soul in the inventing of climate change phenomenon and its ramification on the humanity. Before, Arrhenius there was no concept about climate change. He observed creatively all the phenomenon happened around him like, the change of temperature, severe drought or rain, mass flooding erosion of soil, the raise of sea level and mass migrations. In which he used his mind and at the end in 1876 he put forward the concept of climate change. He claimed that due to the human activities CO_2 , CFC and other greenhouse gasses are emitting into atmosphere which not only depleting the ozone layer but also trapped the heat in the atmosphere returning from the soil. Due to this idea, he not only expressed his soul creatively, but also saved the world from climate changes bulge, while taking certain measures to control it.

Furthermore, Alberto Santos Dumont and Victor Tatin creatively expressed his soul, while in the inventing

of the Aeroplane. Before, their invention people travelled from one place into other taking months to reached into their destination. people used, Donkeys, Horses, and camels as their means of transportation. while, Tatin and Alberto thought creatively to imitate the flying of birds to travel in the air. In 1903, both became able and invented aeroplane, which is further polished and created various shapes and size according to the requirement of modern time. This became possible due to their expression of soul creatively with the invention of aeroplane.

To sum of, it can be deduced that creativity is the expression of human soul. Human soul made it possible through the use of various drives coming from the unconscious toward the conscious. In some people these drives ~~ca~~ invented bulb, aeroplane and climate change phenomenon. while in the other people, it made the authors
