

# ESSAY

## Unethical use of AI tools in education and its consequences

### Outlines

1) Introduction

thesis statement

2) Conch paragraph

3) How AI tools are being used  
unethically in education.

(a) AI tools providing inadequate support  
and guidance.

(b) Chat gpt as a tool to write assignments  
lies in cheating

(c) Inuading students privacy

(d) misleading the students.

(e) Lack of transparency and accountability

(f) Exploitative profiteering

4- Consequences of unethical use  
of AI tools in education:

(a) students over dependency on  
technology

(b) lack of critical thinking

- (c) Loss of human connectivity
- (d) undermining teacher expertise
- (e) Decreased the students ability to think independently.

5- way forward to control unethical use of AI tools in education.

- (a) create and enforce ethical guidelines.
- (b) Development of AI literacy programs
- (c) Implement oversight and accountability measures
- (d) Foster collaboration and transparency
- (e) Implement checks and balance measures

6- Conclusion.

"The consequences of AI going wrong are severe, so we have to be proactive rather than reactive" (Elon Musk).

we are witnessing the first moment of an age where machines can think and ponder.

It is natural for human to fear this advancement that is replacing the human mind. AI has changed the world, this boom of technology is impacting the everyday affairs of life, so its negative use can spoil our whole life. AI tools are being used unethically in education in the form of providing inadequate support and guidance, it is misleading the students due to lack of transparency and accountability. It provides data on all aspects, so the students become over dependent on technology that has decreased their critical thinking ability. It decreased the human connectivity because the students get answers their queries by gpt a that has undermined the teacher expertise. This unethical use of AI tools can be controlled by creating and enforcing ethical guidelines, development of AI literacy programs and by the

implementation oversight and accountability measures.

Inadequate support and guidance on AI tools lead to lack of individualized attention and engagements for students. Over dependence on AI tools without proper human oversight and support AI tools are far worst than being helpful. This approach may lead to neglect the importance of human interaction, empathy and personalized support in educational process.

AI tools invade student privacy. AI tools can collect and analyze vast amounts of data on students, including their behavior, academic performance and personal information. If this data is not used ethically and responsibly, it can invade students' privacy and infringe upon their autonomy.

AI has undermined the teacher expertise. It provide similar information to all in a similar way. Reliance on AI for grading and assessment has devalued the expertise of educators who have spent years honing their craft. Thus unethical use of AI has undermined teacher expertise by replacing authentic human interactions with machine learning algorithms.

The use of AI in education has also contributed to the erosion of critical thinking and creativity, as students are often guided by the rigid parameters set by algorithms rather than think independently. As a result, the use of AI in education made the students over dependent on technology and lose the ability to think independently.

By considering the above drawbacks of unethical use of AI tools in education

the use of AI in education, should be approached with caution, and its potential impact and students learning carefully examined.

for this we need to create and enforce ethical guidelines regarding use of AI tools. Students should aware of those guidelines so that the students privacy can be protected. Hence by creating ethical guidelines students can be avoided by misteaching. There should be

AI literacy programs to aware students from its good and bad use. If these are used in wrong way that will harm the students growth. So, there should be literacy programs for students awareness.

Implementation of oversight and accountability measures should be ensured.

A unethical use of AI tools can mislead the students. AI tools would be used to create fake or plagiarized educational content that mislead students by presenting it as original and legitimate. This could also be used to manipulate research results and data in order to mislead student. It can even create false credentials and transcripts to get admission. This unethical use of AI that mislead the students to do unethical activities is harmful.

AI tools made the human life easier but at the same time it makes them lazy and inactive. Students have become over-dependent on AI tools as it provide information about each and every thing. It has reduced their mental ability to think.

unethical use of AI tools decreased the critical

thinking of students. They bother to think on any query just because they know that they have a tool to find a solution. They become overly dependent on technology. Earlier, students were involved in extra-curricular activities, they were given tasks to think and do by themselves, for now they just have assigned a task that can be done in few minutes by these tools. So, AI has decrease of the critical thinking ability of students.

AI reduced the human connectivity. This has decreased the teacher-student interaction because of providing solution that earlier was given by a teacher. For any problem, student search on these tools beside he goes to find a the solution by himself or get guidance from his teacher. Thus so, the use of AI decreased the human connectivity.
