Although democracy can be traced back to Greece 2500 years ago, democracy in its modern form is very different from past, in some cases the complete opposite. In the 21st century, democracy operates on a constitution, promotes equality, enforces rule of law and provide freedom of expression to every individual. Despite remarkable achievements, democracy still faces multiple challenges such as polarized political views, rising populism, spread of disinformation, eroded democratic norms and a threat of electoral authoritarianism. In the book "How Democracies Die", Steven Levitsky and Daniel Ziblatt provide the case study of Europe and Latin America to highlight above mentioned challenges to democracy. The triumphs of democracy includes digital connectivity that facilitates participation at all levels, evolution of democratic systems i.e. e-governance, concept of free societies (all fundamental rights granted) and global cooperation to tackle challenges like pandemic and climate.

"The Third Wave: Democratization in the late 20th century" by Samuel P. Huntington discusses the third wave of democratization and spread of democracy in the late 20th century. While discussing the transition from Authoritarianism, Samuel highlighted the challenges to be faced by democracy in future. He acknowledged that democracy is not a linear process and that some countries may face setback or reversal.

Today, more than 167 countries are operating on some sort of democracy according to the "Economist Democracy Index". People have the right to exercise their voting rights despite election manipulation in most cases. The democratic institutions are intact although the power is unsanitized in some hands. And people have the right to express their opinion although it is lost in translation most of the times.

The severe polarization has made democracy vulnerable. A certain degree of polarization is normal in democratic regimes because it increases the interest of people in political process thus keeps democracy intact. But the use of political rhetoric to satisfy their personal agendas has enabled the political leaders to divide the masses and rule over them. The rise of an "us versus them" mindset in American socio-political fabric is evidence of this partisan politics that leads to polarization.

Similarly the rise of a populist rhetoric politics has led to a cult like following which promotes xenophobia and extremism among masses. Use of religious rhetoric as in case of Iran to galvanise public is just another challenge to democracy. The ongoing Palestine-Israel conflict has its base in the xenophobic mindset of Jews who

are killing innocent Palestinians in their own land, just to satisfy their political motives of gain control over territory -

The age of digitalization came with multiple challenges for democracy. The use of social media has facilitated the freedom of expression as it allows everyone to voice their concerns - However at the same time the line between ^{valid} information and invalid information is blurred and we are left in a pool of disinformation. This not only undermines the true spirit of democracy by manipulating the minds of public but also aids undemocratic institutions to gain control and power over people. In his book, 21 lessons for the 21st century, Yuval Noah Harari says,

"In the world deluged by irrelevant information, clarity is Power."
