

Unethical use of AI tools and its consequences

1. Introduction:

The use of AI tools in education is potentially unethical as it has several negative consequences. However, implying effective strategies, and designing an ethical framework can help humanity deal with the challenge effectively.

2. The increasing use of AI tools in education

3. How is the use of AI tools in education unethical?

- a. The moral ground; using AI is practically cheating
- b. Injustice against the marginalised and resource deficient people.
- c. The legal aspect; potential copyright infringement.
- d. The use of AI; a violation of the very soul of education.
- e. Commercialisation and profiteering from educational content.

4. The consequences of the use of AI tools in education:

- a. The deteriorating mental capacities of the human flora.
- b. Lack of originality in the educational content.
- c. The use of AI, making human independence questionable.
- d. The continuously falling trust of people in education system.
- e. AI undermining the autonomy & individuality of students.
- f. Lagging social and emotional development of students.

5. Guidelines for minimising the potential threats posed by AI tools on education:

- a. Educating stakeholders on ethical use of AI.
- b. Ensuring transparency and accountability in the deployment of AI tools.
- c. Implementing continuous training for educators.
- d. Establishing independent ethical review boards.

6. Conclusion

Daniela Rus, a roboticist and a famous computer scientist, said in an interview "Dig into every industry, and you'll find AI changing the nature of work". The Globe and every dimension of work that inhabits it has been witnessing this change. The education sector is no different. The use of AI tools in education has been increasing drastically in the recent years. But, it raises ethical questions as navigating the shadows reveals many questionable scenarios. The use of AI tools in education presents itself with a moral dilemma as the use itself is practically cheating. It is the violation of the very soul of education itself and a great injustice with the marginalised community lacking access to such tools. The legal aspect can't be ignored either. The chances of copyright infringements are always there. Moreover, profiteering from such sub-standard educational content has also been witnessed. The AI tools ~~rip~~ strip students of their mental capacities, originality, independence, ~~autonomy~~ individuality, and social and emotional capacities leading to an overall fall in trust of people on education system. However, edu-

cating the stakeholders, ensuring transparency and accountability in the deployment of AI, training the educators and establishing independent review boards can help in countering the challenges. Therefore, The use of AI tools in education is potentially unethical as it has several negative consequence, but designing an ethical framework and implementing effective strategies ~~and~~ can help humanity deal with the challenge effectively.

In the blink of years; the
