Name :- Shahzaib Khan Nayyer

30

LMS-ID :- 30367

Batch :- 344

Subject :- English Essay

QUESTION :- 3

Topic :- Unethical use of AI tools in education and its consequences.

OUTLINE

1. Introduction

Thesis Statement :

Thesis statement is basic. Needs improvement.

The AI tools are frequently

Write its full form when you introduce an acronym for the first time.

used in education for unethical

purposes. ~~The~~ students ~~use~~ acquire to

acquire

complete their task given by

institution or mentors. This will

lead the education towards devastation

to devastation of education system

2. Correlation of AI tools and education.

3. How AI tool is used unethically in education.

   a). Plagiarized assignments are submitted

   b). Exams are attempted by using AI tools.

c). Programming of different apps or websites is done.

d). Teacher prepare their lectures
[Teachers]

4. What are consequences of unethical usage of AI tools.

a). Brain drain of students

b). Skills of students will deplete.

c). Hinderance in quality of education
[Hindrance]

d). Perfidious to parents

e). Vanishing of competent job market.
[Rest of the arguments are sentences. So, stay consistent and do not switch to phrase.]

f). Habit of brain storming will demolish
[demolish what?]

g). Upsurge in laziness.

h). Deceiving teachers.
[Deceiving]

5. Remedies to tackle with usage of AI tools in education.
[Unethical]

a). Role of mentors

b). Usage of checking of plagarism tools.
[plagiarism]

c). Indulge moral habit in students. ?

d). Exams should be shaped conceptually.

e). Motivate the students for self reliance

6. Conclusion.

"When you educate a man in mind and not in morals, you educate a menace to society." (Franklin D. Roosevelt). The unethical use of AI tools will lead the education towards destruction. The students use AI tools to fulfill their given task, and exam. The programmers programmed the apps and website through AI tools. The mentors prepare their lectures with the help of these tools. The consequences which the society will pay through brain drain of students, depletion of skills, upsurge in laziness. It will cause hinderance in quality of education, perfidious to teachers and parents, eradication of competent people in job market and demolish of brain storming habit. The ultimate solution of these issues is that mentors have to play pivotal role. in indulging moral habits in students

The students should have firm belief in themselves to do anything. The exams should be taken conceptual based and acquire the plagarism tools to check the task. As the AI tools are frequently used in education for unethical purposes. The students aquise to complete their task given by mentors or institutions. This will lead the education towards devastation.

"ChatGPT is the most famous AI tool used by students" in their academic activities. Today, the correlation between AI tools and education has become notorious. The ChatGPT was launched in 2022 and built its name in education field. As the students initiated their every task handed over by mentors by using AI tool without thinking on topic. This made the capability

Date: ..../....../........   M T W T F S S

of student destructed. There are pros and cons of everything but it is treated negatively.

The plagiarized assignments are submitted to the mentors. The tasks were given to education seeker by their mentor but instead of using their brains, they used the wrong path and copied their assignments from ChatGPT. This has damaged the mental capability of students and left them of nowhere. "In survey, on average across all regions, 12.2% students admitted that they had ever plagiarized or used someone else words in academic work." (Plagiarism cases and statistics, 01 Nov 2021).

Now exams are also attempted by using AI Tools. This is harsh reality in education

that most of ~~the student~~ are addicted of ~~AI~~ ~~~~ solving the exam honestly by themselves, they use AI tools to get rid of exams and hide themselves from facing the reality. "67% of UK secondary school students use AI for homework and assignments" (Crypto Politan).

The programmers ~~aquire~~ AI tools for programming of different apps and website. The tools have become dangerous as they shape the student of confused personality. Instead of ~~they believe~~ believing on their capability, they use tools to get their task completed which is an alarming situation for the education seekers in the field of education "Artificial intelligence is not a substitute for human intelligence; it is a tool to amplify human

creativity and ingenuity".

The mentors prepare their lectures through AI tools. This is also alarming situation that the teachers take the help of tools to make their student understand about the lecture. If students have to learn through online means then he can do better at home. The teacher should prepare lecture by themselves for proper understanding of topic to students. "The potential benefits of artificial intelligence are huge, so are the dangers" (Dave Waters).

The brain drain of students is major issue in the modern world as the student take the disadvantage of tools to get rid of task and give lame excuses that this is due to time

shortage. But the reality will slap on face of student one day when they will go in job market. We have to face the bitter reality. The degrading of brain by not considering when the question to be solved and directly go on tool to get question solved. "It can narrow down the learning and perspectives that the students might have." (Karal Garcia).

The skill seeking power of student will deplete. The skills are developed by self learning. But the interest of students is diverting towards the other means. So, it is time to ponder on the current situation of country in which everyone is becoming dependent on the tools "Intelligence and education aren't the same, you can have intelligence without education

Date: ___/___/___   M T W T F S S

but you can't have education without intelligence" (Trish McAnn).

The AI tools will cause hindesance in quality of education if student gets all things prepared from tools and the process of learning is damaged then what the quality of education will left? Instead of producing productive students in market, they will be ~~nowadays~~ foolish people in society who don't know what to do with themselves. "35% of Swedish University students use AI regularly" (Science daily).

The using of unethical means is perfidious to parents. It is an unethical behaviour that parents invest their money and time on us and after education, we remain null and void. We are also deceiving ourselves

---

Margin notes in red:
Avoid using informal words such as doesn't, can't etc.
cannot

by making the dull brain and destroying ourselves from AI tools. The usage of tools is increasing day by day that one day we will be addicted of it.

There is already devastating situation in job market as millions of graduated peple are coming in job market and most of them are unskillful. The covid has already damaged the education but it was not enough - that the chatGPT came in 2022 and distusb the education sector. There are pros and cons of everything but all depend on person that how he use it " 36 % of university students say there have been threats of failure if caught using AI inappropriately" (computer World).

The habit of brain storming will ~~disappear~~ which the teacher in school try to develop from base root level. As with the passage of time, the population is getting addicted to machine and AI, they want ease in their life then they will not use brain storming for solving the question as they will copy question on ChatGPT and get all the solved things. "61% of US college students believe AI will become the norm". (Best Colleges).

There is upsurge in laziness of student because the people are depending upon machine in modern world. If student knows that he has not to make any effort to complete his task and rely upon AI tools then he become lazy. So, it has many ferretory which damage the capability.

of human beings.

The usage of unethical means is also way to decieve the mentor. The mentor will be unable to find out your actual capability. So, it is need of hour that we should show our real face to our mentor so that they can guide us in right way and improve our pessonality. day by day.

"Tricks and treachery are the practice of fools, that don't have brains enough to be honest." (Benjamin Franklin).

The role of mentors are very important in guiding the student that how to use the Tools in right way. These are pros and cons of everything but it all depands that the people use the opportunity in

right or wrong way so the mentors will set our direction on right path. "More than 70% of teachers say AI can help students learn but they have had no formal guidance from faculty." (USA Today).

The students will not get themselves away from these things. The mentors and institutions have to apply strict policies on student to keep themselves away from such things. The mentors should use plagiarism tools to check the assignment and validate that it should not be copied from online resources. This will make him able to build his self estem and self reliance on his capability. And do his work by himself.

Transition paragraph is missing before the way forward.

The mentor should shape the character of student by giving know how about the consequences they have to face in the future if they will stick to the AI tools. He should indulge moral habits and teach moral ethics to students and motivate them as well. So it should be done at the critical time of world. " Honesty is a commitment to truth, even when it is difficult or inconvenient. It is reflection of your character and values, shaping way you navigate the world."

The exams should be designed on conceptual basis so that student have to work hard and don't rely on internet resources to get pass in exams. The educational system should be modernized. It should

cater the modern world requirements as well. "Push yourself, because no one else is going to do it for you."

The mentors and family members should motivate the students for self reliance. He should know his strength instead of relying on online resources. We should not depend on wrong ways to get accomplished his work. He should do his work by himself.

In a nutshell, ^t The AI tools have become fatal disease for educational system. They have mobilized the students. The students should understand the requirements of the modern world. The student should not submitt plagiarized work and get solved exams. The major issues that

they have to face case brain drain of students and it also perfidious to parents. This also influence the habits of students. This can be solved by performing the responsibilities. The students should be motivated for self self reliance.

"Artificial Intelligence is a tool, not a threat."
(Rodney Brooks).
