UNETHICAL USE OF
AI IN EDUCATION

[Red annotation: That is not the give topic. The topic is unethical use of AI tools in education and It consequences]

OUTLINE

1. INTRODUCTION

a. **Thesis Statement:** The unethical use of AI tools in education poses significant consequences which jeopardizing the integrity of learning environments. However, by exploring the multifaceted implications of such practices, emphasizing the need for ethical guidelines to safeguard the educational landscape

[Red annotation: Sentence incomplete]

2. SIGNIFICANCE OF AI TOOLS IN EDUCATION.

3. PESSIMISTIC VIEW OF AI TOOLS: UNETHICAL UTILIZATION IN EDUCATION.

[Red annotation: Not a suitable expression]

a. Lack of transparency in Algorithm

b. Automated grammar check by AI Effecting command on language

[Red annotation: Effecting]

c. Promoting the environment of cheating and dishonesty

d. Fading the relation b/w teacher and

e. AI fulfilling teacher responsibility.

f. Discrimination in grading and existing inequality.

g. Culture of lack of communication skills and responsibility is promoting

[Red annotation: These are impacts not unethical use. Unethical use would be Delegating assignments to AI. Teachers using assesment tools instead of grading papers themselves. Use of AI for assistance during exam. Unsupervised use of AI in Teacher hiring process.]

4. IMPACTS STEMMING FROM UNETHICAL USE OF AI IN THE EDUCATIONAL REALM

? AI Affects the brainstorming of students

a   Dehumanization of learning

b   Favouring the process of cheating in assignment & Presental

c   Blogs and particles writing by AI and plagiarism not detected

These should be in use not in consequences

d   Ready made material for Research papers

e   AI effect the brainstorming of students

Repetitive

MITIGATION STRATEGIES COUNTER UNETHICAL USE OF AI DATA IN EDUCATION

a   Ethical AI development in education

What does that mean?

b   Check and balanced mechanism for AI

c   Addressing bias and fairness in Algorithm

Sentence structure

d   Trains educators on AI ethics

CONCLUSION..

Robots and AI tools are free from unethical consequences. However, these are humans which will effect at the end, if AI tools use continously unethical. Humans have soul and instinct to judge the difference between ethical and unethical means. AI itself neutral without having capacity of judgment so its use which makes it good or bad in every field. The unethical use of AI tools in education raises concern the status of educational realm. The significance of AI tools is never declined but its pessimistic use in the education overcomes its benefits sometime lack of transparency in Algorithum effecting command language and promoting cheating and dishonesty. It not only fables the relationship between teacher and student but creates discrimination in grading system. The negative use of AI in education system is decreasing the sense of responsibility and communication skills among students. These are stemming negative impacts in educational realm. First of these are dehumanization of learning, cheating, not undetected plagiarism and readymade material which result as lack of brainstorming and mind mapping. The utilization of AI is creating unhealthy environment for teachers and lack of trust and? motions. These impacts can be reduced by adopting strategies such as ⟶

effect? and monitoring and ethical AI development Addressing the fairness in Algorithms and training of teach educators can bring change in unethical data? usage. The unethical use of AI tools in education poses significant consequences which jeopardizing the integrity of learning environments. However. by exploring the multifaceted implications of different practices, emphasizing the need for ethical guidelines to safeguard the educational landscape.

"AI has the potential to address some of the biggest challenges in education today, innovate teachings and accelerate progress towards SDG-4."

(UNESCO: AI IN EDUCATION)

Artifical intelligence has a significant impact in educational and curriculum field. It has positive consequences which not only integrate the process of learning, writing assignment, check grammars, subject analysis, current scenario but also helps educators to manage timetable, checking

performance and regulate educational policies by using AI. Various AI tools has been utilizing in educational realm. Some of them are ChatGPT; for answering any query and help in analysis of data, Cognii; assignment writing and document reading, Grammarly; check grammar by using AI tools, and Bard AI; to answering any question and provide current data. These AI tools are helping educators and learners with positive consequences. Although, AI has positive impacts in education but its pessimistic view when AI is unethically use in education cannot be neglected. As the worth of AI can be checked by its impacts. "The question is not "How will we get around this? but rather "Is this still worth doing?"" (The Atlantic)

To check the worth of anything the use of that tool impacts. The use of AI tools which do not have transparency in algorithm raises questions. Algorithm monetarization in recent world is not possible until yet. In the educational field, the students, educators and learners use AI unethically. They do not focus on its & accountability which raises concern of privacy. Now students need to understand content but it is much more about its mystery of the interpretation and utilization of the content, which need transparency. While AI tools fully depend on algorithm which have lack of transparency and ultimately lack of content for education.

Sentence structure

That's an inherent problem of AI thats not unethical use

The grammar check by using AI technology is a big effect of lack of transparency in algorithum. In the educational arena, for the students, the checking of grammar is a big problem. Although some AI tools such as Quilbot, Grammarly and language tool helps the educators to find out the solution but it not give proper reason for mistake. They check grammar without focusing on mistakes, and automatically correct these mistakes and submit their document. It promotes the poor language skills. The command and grip on any language can be achieved by them knowing reason of gramatical error and the focusing area in future. The automated grammar check by AI effecting the command of a student in education.

When the students has not fully understood the language on which their curriculum of honesty and cheating prevails.

Since the arrival of AI tools the cheating especially by using these tool is increasing. a Various study by UNESCO shows that writing skills promotes the unethics in society. For example, the countries of USA and Uk has low rate of cheating in educational area then in India, Pakistan and Srilanka. The reason

reason behind this is lack of command en English language. but The relation between teachers and students is fading due to over dependency on Artificial ... and less grip on ... ...uage. AI tools has capacity to control and especially interact human brain. The students avoid from shame, dehumalization and called as cheaters. When they interact with others teachers sometimes negative interaction inter impact them badly. While using AI no such interact occur so they prefer Ad over their human teachers. Such environmental variation is altering the relations between humans. Hence the fading relation of students and teacher is promoting interaction between educators and AI. As quotes showing

"The generation which leads AI, would be ruler"

(V. Putin, Russian President)

Hence, the relation between both the teachers and the students is not remain same. Now it became as competitor to lead AI.

Sometimes, such relations lead to the discrimination in grading system and existing inequalities in educational field. AI power assessment and analyzing tools helps to analyze and judge students. AI grading system gave grade on the basis of bias and discriminated. Such system poses a challenge in education system.

New scientific and technical which are not in artificial intelligence will not be promoted by AI. Similarly, new concept develop by human brain will not check and grade as it should be. Such things and other religious and racial discrimination is existing inequalities is educational system.

When students face educational and societal discrimination they loss their confidence in communication skills and avoid from their responsibility. This will lead to command of ai rather humas. As stephen said.

"The development of full
