Q3: Unethical use of AI tools in education and its consequences

Outline

1) Introduction

2) Unethical use of AI tools in education

[margin note: Chatgpt is used]

2.1) Use of chatgpt for the searching of study material

[margin note: After introduction paragraph, write a paragraph on the overview/ scope of the topic and expand the proposition.]

[margin note: Rest of the points in outline are sentences. This one is a phrase. Be consistent.]

2.2) AI kills the self studying of the students

2.3) AI provides a short way to search study related material that is a threat to their future of them

[margin note: Is it different from point 2.1?]

2.4) It wipes out thinking capability of students and teachers

2.5) AI spreads misinformation and unauthentic education related information

2.6) It is becoming a slow poison for the mental ability of students

[margin note: Same as 2.4]

2.7) AI can be the cause of 5th war generation

[margin note: 5th generation war]

3). Detrimental Drawbacks of AI in Education

3.1) Damages the self thinking and analytical approaches of students and teachers

3.2) It can be the factor behind plagiarism during thesis and research work

[margin note: Main heading 2 and 3 are telling same thing: impacts of unethical use of AI.]

3.3) It affects the strive of students to find any data

3.4) it is cause of misinformation

[margin note: In main heading 2, you should tell how and in what ways AI is being used unethically in education (assignments making, lecture making, cheating during exams etc)]

3.5) It can affect the interest of students and teachers

3.6) It affects the list of writers about writing new books

[margin note: Write a paragraph or two on causes]

4) Remedial Measures to avert the ill pitfalls of AI in education

4.1) Need of making rules to use AI in educational institutes

4.2) AI can be allowed for ~~coming to~~ get minor information

getting
What is minor information?

4.3) AI's use must be limited with strict checks and balances.

4.4) Government must take some steps to control the fabricated information

5) Conclusion

Essay.

The arrival of new tools in the modern world from time to time has changed the direction of world. Along with a plethora of good things, these tools have become an immense problem for the humans. The advent of technology has deprived the mankind of ~~from~~ analytical pondering. Not only this but advent of technology has ruthlessly affected the nature. It has destabilised the temperature of the earth and causes many disasters annually. AI is one of the moderns tools of human's creation that has altered the perceptions of people about things. AI can be defined as " An innovative tool of searching things and providing other facilities in health, education and

in other facets of life AI has pushed the mechanism of education at other level including ethical and unethical use. There is no denying in the fact that AI has ethical uses but along with them it has unethical uses particularly in education, such as use of chatgpt provides a drug to students. AI kills the self-productivity of students. Moreover, it offers a short path for searching of study related material to teachers and students. That is massive threat to their future. Lastly, it wipes away thinking ability of students and teachers. These unethical uses of AI cause destruction of self-thinking, it gives birth to the palagiarism during research and thesis related work. Additionally, it affect self-strive of students for finding of study related data. With some measures these unethical uses of AI can be averted there is dire need of making rules of using AI in education institutes. AI must be used for getting of minor information, it must not be used wholly for the purpose of study. This essay will discuss the unethical uses of AI in education and its deteriorating pitfalls and this essay will offer some recommendation to avert unethical uses of AI in education.

To begin with, availability of chatgpt has become a damaging unethical tool for students and teachers. It causes

the damage of study as it provides a rapid result of searched data. It does not offer choices of finding data as google and yahoo provide. Chatgpt captivates the minds of students and restricts [restricts] them to available data. It takes away the option of multiple choices by providing limited results. Thus, chatgpt is a major unethical use of AI in education.

How is AI giving limited results an unethical?

Another unethical use of AI is, that [that] it kills the self-productivity of pupils. It has been the most-debating [most debated] topic on various platforms. According to a professor of London School of Social science, " Before the invention of AI, students were keen to finding new ways and patterns of self-productivity but with the arrival of AI, now students do not seem as self-productive as they were." This say [quote] of a professor is an evident [evidence] that AI has become a factor of eruption of self-productivity. Due to easily availability of AI students do not focus on their self-productivity. AI has killed the element of self-productivity. So, it is clear that AI kills the self-productivity of students.

Thirdly, AI provides a short way to have result of searched data that seems a threat for the future of students and it is promoting unethical

use of AI. provides a result of searched, data in very short span of time that is a massive threat to the ~~treat~~ future of students as it provides no arrangement of quest of the ~~knowledge~~ knowledge which is essential for them. To sum up, AI provides a short way of searching data that is threat to the future of students.

Moreover, another use of AI that is obviously unethical, it wipes out thinking capability of students and teachers. It provides a random output of searched querries of students that does not provide the option of self-thinking, self-discovery AI gives none of choices to choose and decide the best data but gives a limited choice. Students and teachers seem being confused due to limited search results of AI. Hence, unethical use of AI is that it wipes out the thinking ability of students and teachers.

Furthermore, AI spreads misinformation and unauthentic information without any verified element of assessing information as it is robot and machine based technology. It has a big question mark on its credibility as compared to google. It has given a birth to the deep fake a source of tarnishing the lives of celebrities, authors and political leaders in the world. Due to these allegations AI has caused

destruction of moral and ethical values which are the clear evident that AI seems unethical tool and it is deviating the social fabrics of societies. Therefore, it is crystal that AI spreads the misinformation and unauthentic data.

Moving ahead, another lethal unethical use of AI is that it is becoming a slow poison for the mental capabilities of students. It seems an addiction over the brains of students because it does not provide an alternative or useful path of augmenting the individual brain capability. It has snatched the thinking of students and it is becoming a sleeping pill for them that has limited them. According to latest report of a private organization " AI has reduced the abilities of mental ability. So, one can say that AI is becoming an enemy of the mental ability.

Last but not the least, AI can be the worsening causes of 5th generation war. There are very clear chances that can lead to the internal conflicts within states, societies and communities. As, AI is an open threat to the economy of the states. AI can cause the

unemployement, economic disparity and other various issues which might inflame the civil wars among the nations within their states. AI is a threat for the teachers as well as it has ability to replace them in form of robotic machines. Ergo, 5th generation war can be arises within nations of state. ~~[unclear]~~ unethical use of AI.

In previous paragraphs, the unethical uses of AI in education ~~have~~ have been discussed. In coming paragraphs, the consequences of unethical use of AI will be discussed.

To start with, the unethical use of AI in education damages the self-thinking and analytical approaches of the students. It puts restrictions on the mind sets of students. Due to fast availability of data, students do not try to experience or visualizes the significance of self-thinking and analytical approaches. Students find themselves laziness for researching of any piece of information that limits their pondering efforts. So, unethical use of AI affects the self-thinking process of students.

Another consequence of unethical use of AI is that, it gives birth to the element of palagiarism during the research and thesis projects of them. It creates problems for the students where they all have same type of information

this makes them indolent and makes them dependent on the use of AI which affects their credibility of research and it becomes a reason of their failure. Thus, AI affects the research work and thesis work of students in form of palagiarism.

Moving ahead, the unethical use of AI damages the quest of self strive of students and self efforts to find any ethical data related to their studies. It puts some of the checks over the students and it provides limited information to all the students without any innovative things. It restricts and captivates the mindset of students. So, AI damages the the self-strive of students.

Moreover, unethical use of AI is causing and affecting the validity of information. It affects the flow of correct information and it tarnishes the image of true and correct information. Hence, AI promotes the misinformation of things and it affects the flow of correct information.

Furthermore, AI can affects the health of students and teachers if its devices are used majorly. It can affect their mind and can disturb the eye vision,

mechanism. AI has various negative impacts in form of mental disabilities. Therefore, unethical use of AI can affect the health of students and teachers.

Last but not ~~the~~ least, AI affects the struggle of writers about writing or reading of the new books. As it provides summary of the books in short paragraphs which is ultimately threat to culture of reading which is already in doldrums. Unethical use of AI has eliminated the the interest of individuals for reading books. So, AI is a threat to the reading culture.

In above discussed paragraphs the consequences of unethical uses of AI have ~~been discussed. In next paragraphs the remedial measures to avert ill pitfalls of AI use will be discussed.~~

Having discussed the consequences of..., it is important to find remedial measures for...

To begin with, there is dire need of making some rules of AI using in educational institutes. It must be only used for the understanding of basic concepts. It must be discouraged to use for the all means because it kills the mental ability of students. Hence, there is need of some rules to control unethical use of AI.

Moreover, unethical use of AI can be controlled if it is only used for the minor guidance related to education. It will encourage

students to be less dependent on the AI. Hence, AI must be used for acquiring of minor education.

Furthermore, AI can be useful and productive if some of the checks and balances are imposed over it. It can be beneficial for students if its progress be added with some measures such as, offering various search engines. Thus, AI can be useful if it has some checks and balances.

Lastly, governments must make strict policies to make the use of AI very productive. Trainings of using AI must be given to students so that they may get more benefits from this modern tool. Students must learn the protocols and ethical use of AI. Therefore, government has to make some rules for ethical use of AI in education.

To sum up this essay, one can say that AI has ~~brought~~ myriad of benefits along with damages. Unethical use of AI in education is that, it wipes out thinking capability of students and teachers, it also spreads misinformation and unauthentic education related information. In addition to these, other unethical uses of AI in education are, it is becoming slow

poison for the mental ability of students. AI can cause the 5th generation war also. These unethical uses affect the self-struggle of students for finding new data, along with this it also affects flow of information, it can also affect the health of students and teachers and it furthermore affects the thirst of writers and authors about reading. Inspite of all the unethical misuse of AI in education there are some blueprint to avert unethical pitfalls of AI in education. It can be used in a way of productivity if AI is used for the acquiring minor information, and it must have some checks and balances. Government must also take ~~make~~ some steps to control unethical use of AI in education. As AI is the modern tool of technology, it as benefits and demerits it does not mean that it must be wiped out from the world, but it can be very productive if the word collectively does efforts to get the productivity and progress from it.
