

of environmental degradation. Failure of climate change policies is one of the major causes of climate crisis. However, it has some serious impacts on the world. Rapid rise in temperature and frequent eruption of wild fire has been recorded in last decade. Beside these implications, it aggravates the humanitarian crisis, spreads diseases through floods and effects directly to human health. Melting of glacier is one of the major repercussions of environmental change. To curb these looming impacts, the world ought to take instant measure to solve these issues by promoting sustainable development, turning towards renewable resources, implementing international agreements effectively and spreading environmental education. These measures can play a key role to restrict the environment degradation which has gone beyond the tipping point. In a nutshell, rapid increase in pollution has become a severe crisis on the earth. The environment has gone beyond the tipping point now because of multiple reasons. It has many impacts on the earth. However, it
