		10 Ph
	The Environment has	
	Gione Beyond the	
	tripping Point How	
	Outline:	
1-	Introduction	
	The current scenario of environment	
41.74	is indicating that environment has	
	gone beyond the tripping point now.	
	However, there is a room of hope and	
	by taking holism approaches damages.	
	con be controlled.	
2-	Current Overview of Environmental	
	Conditions-	
	2:11 Case in point: Report of the	
	United Nations	
3-	Manifestations that Environment has	
	Gone Beyond the Taipping Point Now.	
A)	Severe Increage in Temperature of Planet	
	a) case in point: Report of the World	
	Bank	
B)	Melting of Icesheets	
	b) case in point: Melling of Greenland	
		110000

<u>C)</u>	Eruption of Mildfires. = off	
	c) Case in point : Wildfires in Turkey	
the Audi	word in and Conada	
<b>D</b> )	Shrinkage of Water Bodies	
	d) case in point: Shrinkage of Indus	
	Basin	
E)	Disruption of Chlobal Food Chair	
	e) Case in point: Report of Al-Jazeera	
F)	Displacements of Climate Refogees	
	f) Case in point: Report of Unicef	
4)	Occurence of Zoonitic Dieseases	
	9) Cage in point: Report of WHO	
4-	Contabutory Factors in Environmental	
	Degradation	
A)	Emission of Cosbon Dioxide (co2)	
<b>B</b> )	Militiary Adventuges and Nuclear conflicts	
c)	Modernization of Litestyles	
D)	Industrial Revolution	
5-	Recommendation to Control the Damages	
	of Environment	
A)	Switch to Renewable Energy Resources	
8)	Implementation of Promised Global Innitiatives	
(2)	Use of Chreen Technology	

		T = = =
	In 1988, one of NASA	
	scientist had warned the world	
	of coming environmental domages	
	in family of the 10 US Congress.	
	The world was not ready to	
	Understand his statement at	
	that time but later time	
	has proved that he was right.	
	Today, the environment has	
	900 Werk on formal language pland the tripping point	
	The damages has already	
	done and the world is	
	facing repurcussions of it. Climate	
	Change does not respect boundaries	
	and people. It is a global.	
	threat which is now becoming	
	an existential threat for all.	
	Currently, environmental conditions	
	are extreme and posing threats	
	They are hinting towards	
	degradation of environment upto	
	certain extent. These are many	
· · · · · · · · · · · · · · · · · · ·	Market Control of the	The second secon

大大大大大大大大大大大大大大大大大大大大大大大大大大大大大大大大大大大大大	
manifestations that show environment	
has gone beyond the tripping point	
now it includes severe increase in	
temperalise of planet, melting of	
icesheets exuption of wild-fires	
and Shrinkage of Invaler bodies.	
Moreover, disruption of global food	
chain, displacement of climate	
refugees and occurrence of zoonitic	
diese ases me also pointing	
towards environmental degradation.	
There are multitude of contributory	
factors that pushed environment	
beyond the tripping point. These	
factors are emission of Carbon	
diotide, militiary adventuges and	
nuclear conflicts modernization	
of lifestypes and industrial	
revolution. However, there is	
always a room of hope and	
optimism and environmental	
degradation con le slow donn	

by switching to renewable emergy	
gesources, implementation of promised.	
global inditialires use of green	
technology discourage of urban	
sprawl and promote sustainable	
environmental approaches. The	
current scenario of environment	
is indicating that environment	
has gone beyond the tripping	
point now. However, there is a	
room of hope and by taking	
holistic approaches, idomages con be	
Controlled.	
The coment seenairo of	
environment is alaraming. The	
world is facing mexistential	
threat in form of climate	
changes. The six major threats of	
Gt 21st century are related	
to environment. As per report	
of the United Nations, time!	
is ticking towards 2030, a	

	9106al deadlines to acheire sustainable	
	environment goals. Unfortunately the	
	world has not acheived any	
があり	satistactory outcome. This shower that	
	environment has gone beyond	
	the tripping point move.	
	Following paragraphs will shed	
	light on manifestalions thoroged to have such transition	
	environment has gone begond	
	the mountained point now.	
	Firstly the planet leasth is	
*	esperiencing. Severe linereacose vino	
	temperatures It, has increased in	
	hotness more than expeded in the	
	temperature of earth, hasin	
	scaled up lato ac in last	
7	half or century which I is in two	
	times more than upre-industrial	
	revolution. As per report not	
	the United Nation, the	
	era job jobal warming has	
	over, the era of grobal	

boiling started. The pace at	
which temperature of planet is	
increasing is ominious threat to	
all. Hemse, the environment has	
faced extreme temperature.	
Secondly, the melling of	
icesheets at soncerned speed	
is a omen of regironmental	
degradation. Recently 11-thas	
Observed that the Erregaland mellia	
in . Speedy way. It was supposed	
to be melt in In upcoming coming	
100 years as per the	
(en viron metal ognists) × len viron mental experts.	
Therefore, the melling of	
icesheets of Greenland is	
another manifestation of environment	
has gone beyond the tripping	
point mow.	
Thirdly, the I sudden	
eroption of villatires is	
q matter of concern.	

1.00		
	The exuption of wild-fires in	
	Turkey and Conada, which	
	ase low-temperalized country are	
	alaiming. The wild-times in conada	
	and turkey has damaged large	
	forests and wildlife. It continued	
	for days and showed thad	
	environment has gone beyond	
	tripping Work on social pedignet now.	
	Moreover, the shrinkage of.	
	water bodies is another manifestation	
	of environmental degradation. The	基
	water resources has reduced	
	and shrinked to threatening	
	level which can rose to	
	hydrocon-Hicts. According to the	
	Indus water commission, the	•
	Indus Basin has shrinked undue	2 - V.
	to snowless winters. The Indus	
	Bousin provides meder to India, Pakistan	
	ond Bongladesh. Its shrinkage is	
	alaming fox existence.	
The state of the s		The second secon

	Additionally. It has observed	
	that the global food chain	
	has disropted due to extreme	
	Chimate challenges. The Wo Aljazeera	
	has unveiled a stark reminder	
7.	of food insecurity around the	
An Sweet .	world in coming years. The	
	lands are not producing &	
	enough food like before due	
	to surge in legrironmental	
	pollution and unfavourable craim	
	-stonces like temperature conditions.	
	Til 2050, the number of	
	tood insecuse people nould be	
	doubled as per Aljazeera report.	
	Hence, the distribution in grobal	
	food chain in another manifestation	
	of environment has growing styllogy and	
	tripping point.	
	Besides disruption of global	
	food chain, there is andisplace	
	-ment of climate refugees in	

 	7 - 7 - 7 - 7
Climade prone countries. The	
numbers of l'alimate refugees	
has in creased with stagent	
numbers. According to the report	
of the Unicef, the climate	
retugees in Bongladest our	
afond 3 million in one season.	
They are victims of floods	
which leads to to internal	
displacement of masses. Therefore,	
displacement of climate refugees	
due to floods prindicatinguis	
environmentales degradation.	
Lastly. The occurence of	
zoonitic diseases 1 due to	
melling to greensheets and	
cetreme temperaluses are	
hinting intowards environment	
has gone beyond tripping point	
now. The Morld Health	
Organization has reported that	
sud den occurrence d'iseases	
是一个人,我们就是一个人,我们就是一个人,我们就是一个人,我们就是一个人,我们就是一个人,我们就是一个人,我们就是一个人,我们就是一个人,我们就是一个人,我们就	CONTRACTOR OF THE PARTY OF THE

in vulnerable climate countries	
are never observed before. They	
are threatening to lite of	
masses and endangered to	
other species. Many wildlifes	
species are continct or endangered	
NOW. 80, occurence of zoonitic	
dieseases has endorsed the	
-fact that environment has	
gone begond tripping point now.	
These are multitude of	
contributory factors that are	
involve in environmental degradation.	
Following paragraphs are sheding	
light on those tactors.	
Firstly the emission of	
carbon dioxide in the environment	
is contributing in environmental	
domage. The largest world	
emitters are from grobal	
north and deterorate environment	
in greater extent. The carbon

into environment wastes and non-livingable. made it as revolution industrial The. carbon introduced has countries which teading am ong provide them legal emission carbon dioride into any level. environ mend Vierolation thus, Industrial factor contributory degradation. environmental Plz explain also current thallendewever, there the always a room of kope for better. 80, following are some suggestions U to controll the damage of environment mat has already done. Firstly, there is need of switching to renewable energy resources from non-reme wable. The government and internactional environment agencies should ensure that energy resources should be renewable in industrial sectors. Secondly mese time implement promised innitiatives global conserve en vironment. These promised innitiatives include Koy oto Protocol Confesence Parties (OP-28) all ond

選が	many more Therefore non-governmental

The sustainable practices save ment environment would trom forther damages. It will also conserve resources for future generations. Hence the promotion of sustainable approaches ican be lefficient and holst-lia approach. a notshed it can be concluded that the environment has gone begond the tripping point now ide to multiple. factors. The current mentionmental conditions are omen of ominious threat to existence of many species. These are monifestations of environmental dedication aforementi -oned. It endorsed the fact that renvironment at domage has been adone at insurmountable level. However, the domages con be wes res slow down by taking concrete steps. Impossible Ps not a stud with Physical and attitude and there is nead of that careful allitude towards environment by humans. The King of the United Kingdom has rightly said that; When your house is on fire, the first thing 400. do it stop pouring bil. By using eco-domaging technologies, humans age airtiteel of their own deakeling" Scanned with CamScanner
